CHEMISTRY

Paper 2 Organic and Physical Chemistry

7405/2

Tuesday 12 June 2018 Afternoon

Time allowed: 2 hours

For this paper you must have:

- the Periodic Table/Data Booklet, provided as an insert (enclosed)
- a ruler with millimetre measurements
- a scientific calculator, which you are expected to use where appropriate.

At the top of the page, write your surname and other names, your centre number, your candidate number and add your signature.

www.xtrapapers.com

BLANK PAGE

0 2

INSTRUCTIONS

- Use black ink or black ball-point pen.
- Answer ALL questions.
- You must answer the questions in the spaces provided. Do NOT write on the blank pages.
- Do all rough work in this book. Cross through any work you do not want to be marked.

INFORMATION

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 105.

DO NOT TURN OVER UNTIL TOLD TO DO SO

Answer ALL questions in the spaces provided.

0 1 This question is about the reactions of alkanes.

0 1 . 1 Alkanes can be used as fuels.

Give an equation for the combustion of heptane (C_7H_{16}) in an excess of oxygen. [1 mark]

2 Heptane can be obtained from the catalytic cracking of hexadecane (C₁₆H₃₄) at a high temperature.

Identify a suitable catalyst for this process.

Give ONE condition other than high temperature.

Give an equation for the catalytic cracking of one molecule of hexadecane to produce one molecule of heptane, one molecule of cyclohexane and one other product. [3 marks]

Catalyst		
Condition		

Equation _____

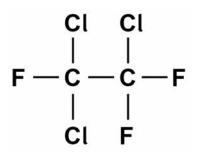

0 1.3 Alkanes can be used in free-radical substitution reactions to produce halogenoalkanes.

> Give equations for the propagation steps in the reaction of butane to form 2-chlorobutane. [2 marks]

0 1 . 4 Chlorofluorocarbons (CFCs) are a group of halogenoalkanes currently banned in many countries. They cannot be used as solvents or refrigerants because of their effect on the environment.

The structure of a CFC is shown.

Identify the radical produced from this CFC that is responsible for the depletion of ozone in the atmosphere.

Explain, with the aid of equations, why a single radical can cause the decomposition of many molecules of ozone. [4 marks]

Radical			

Explanation

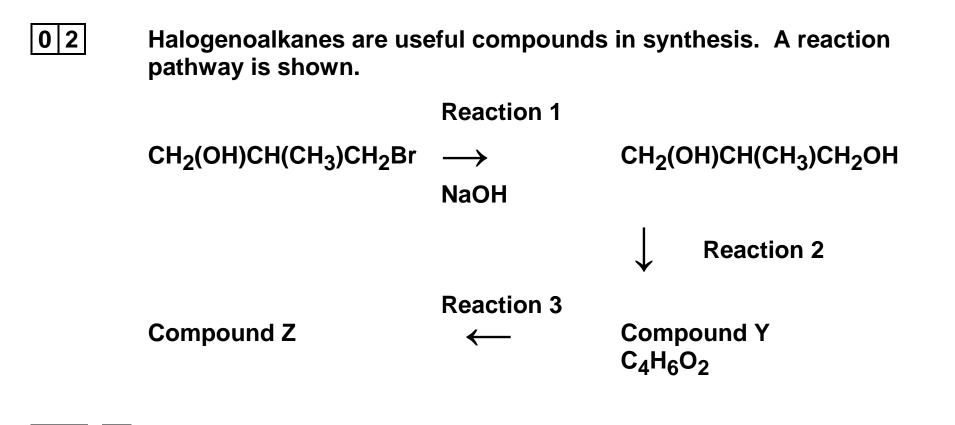

7

[Turn over]

10

 $\boldsymbol{\omega}$

02.1 Give the IUPAC name for $CH_2(OH)CH(CH_3)CH_2Br$ [1 mark]

BLANK PAGE

02. **2** Reaction 1 occurs via a nucleophilic substitution mechanism.

Explain why the halogenoalkane is attacked by the nucleophile in this reaction. [3 marks]

02.3 The infrared spectrum of Compound Y shows a significant absorption in the range 1680–1750 cm⁻¹

Draw the displayed formula of Compound Y. [1 mark]

02.4 Compound Z has the empirical formula C_3H_4NO

Give the structure of Compound Z.

Suggest the reagent for Reaction 3. [2 marks]

Structure

Reagent for Reaction 3

The oxidation of propan-1-ol can form propanal and propanoic acid.

The boiling points of these compounds are shown in TABLE 1.

TABLE 1

Compound	Boiling point / °C
propan-1-ol	97
propanal	49
propanoic acid	141

In a preparation of propanal, propan-1-ol is added dropwise to the oxidising agent and the aldehyde is separated from the reaction mixture by distillation.

03.1 Explain, with reference to intermolecular forces, why distillation allows propanal to be separated from the other organic compounds in this reaction mixture. [3 marks]

03.2 Give TWO ways of maximising the yield of

propanal obtained by distillation of the reac mixture. [2 marks]	tion
1	
2	

03.3 Describe how you would carry out a simple test-tube reaction to confirm that the sample of propanal obtained by distillation does NOT contain any propanoic acid. [2 marks] [Turn over]

17

03.4 A student carried out an experiment to determine the enthalpy of combustion of ethanol.

> Combustion of 457 mg of ethanol increased the temperature of 150 g of water from 25.1 °C to 40.2 °C

> Calculate a value, in kJ mol⁻¹, for the enthalpy of combustion of ethanol in this experiment. Give your answer to the appropriate number of significant figures.

(The specific heat capacity of water is 4.18 J K⁻¹ g⁻¹) [3 marks]

kJ mol^{−1}

[Turn over]

Enthalpy of combustion

03.5 A mixture of isomeric alkenes is produced when pentan-2-ol is dehydrated in the presence of hot concentrated sulfuric acid. Pent-1-ene is one of the isomers produced.

> Name and outline a mechanism for the reaction producing pent-1-ene. [4 marks]

Name of mechanism

Mechanism

03.6	A pair of stereoisomers is also formed in the
	reaction in Question 03.5.

Name the less polar stereoisomer formed. Explain how this type of stereoisomerism arises. [2 marks]

Name		

Explanation

04

Compounds A and B react together to form an equilibrium mixture containing compounds C and D according to the equation

 $2A + B \rightleftharpoons 3C + D$

04. A beaker contained 40 cm³ of a 0.16 mol dm⁻³ aqueous solution of A.

9.5 × 10^{-3} mol of B and 2.8 × 10^{-2} mol of C were added to the beaker and the mixture was left to reach equilibrium.

The equilibrium mixture formed contained 3.9×10^{-3} mol of A.

Calculate the amounts, in moles, of B, C and D in the equilibrium mixture. [5 marks]

Amount of B	mol
Amount of C	mol
Amount of D	mol

04.2 Give the expression for the equilibrium constant (*K*_c) for this equilibrium AND its units. [2 marks]

Kc

Units

04.3 A different equilibrium mixture of these four compounds, at a different temperature, contained 0.21 mol of B, 1.05 mol of C and 0.076 mol of D in a total volume of 5.00 × 10² cm³ of solution.

At this temperature the numerical value of K_c was 116

Calculate the concentration of A, in mol dm⁻³, in this equilibrium mixture.

Give your answer to the appropriate number of significant figures. [3 marks]

Concentration of A mol dm⁻³

www.xtrapapers.com

BLANK PAGE

2 6

04.4 Justify the statement that adding more water to the equilibrium mixture in Question 04.3 will lower the amount of A in the mixture. [3 marks]

[Turn over]

13

0 5 Bromate(V) ions and bromide ions react in acid conditions according to the equation

 $BrO_3^-(aq) + 5Br^-(aq) + 6H^+(aq) \rightarrow 3Br_2(aq) + 3H_2O(I)$

05.1 A series of experiments was carried out at a given temperature. The results were used to deduce the rate equation for the reaction. $rate = k [BrO_3^{-}][Br^{-}][H^{+}]^2$

 TABLE 2 shows an incomplete set of results.

TABLE 2

Experiment	Initial [BrO ₃ ⁻] / mol dm ⁻³	Initial [Br [–]] / mol dm ^{−3}	Initial [H+] / mol dm ⁻³	Initial rate of reaction / mol dm ⁻³ s ⁻¹
1	0.10	0.20	0.30	2.4 × 10 ^{−2}
2		0.20	0.30	3.6 × 10 ^{−2}
3	0.20	0.40	0.50	
4	0.10	0.10		2.7 × 10 ^{−2}

Use the data from Experiment 1 to calculate a value for the rate constant, *k*, at this temperature and give its units.

Give your answer to an appropriate number of significant figures. [3 marks]

k _____

Units _____

Space for working continues on the next page

Space for working

30

05.3 A second series of experiments was carried out to investigate how the rate of the reaction varies with temperature. The results were used to obtain a value for the activation energy of the reaction, E_a

Identical amounts of reagents were mixed at different temperatures. The time taken, *t*, for a fixed amount of bromine to be formed was measured at different temperatures.

The results are shown in TABLE 3.

TABLE 3

Temperature, <i>T</i> / K	$\frac{1}{T}$ / K ⁻¹	Time, <i>t</i> / s	$\frac{1}{t}/s^{-1}$	$\ln \frac{1}{t}$
286	3.50 × 10 ^{−3}	54	1.85 × 10 ^{−2}	-3.99
295	3.39 × 10 ^{−3}	27	3.70 × 10 ^{−2}	
302		15	6.67 × 10 ^{−2}	-2.71
312	3.21 × 10 ^{−3}	8	1.25 × 10 ^{−1}	-2.08

Complete TABLE 3. [2 marks]

05.4 The Arrhenius equation can be written as

$$\ln k = -\frac{E_a}{R} \left(\frac{1}{T}\right) + C_1$$

In this experiment, the rate constant, *k*, is directly proportional to $\frac{1}{t}$. Therefore

$$\ln \frac{1}{t} = -\frac{E_a}{R} \left(\frac{1}{T}\right) + C_2$$

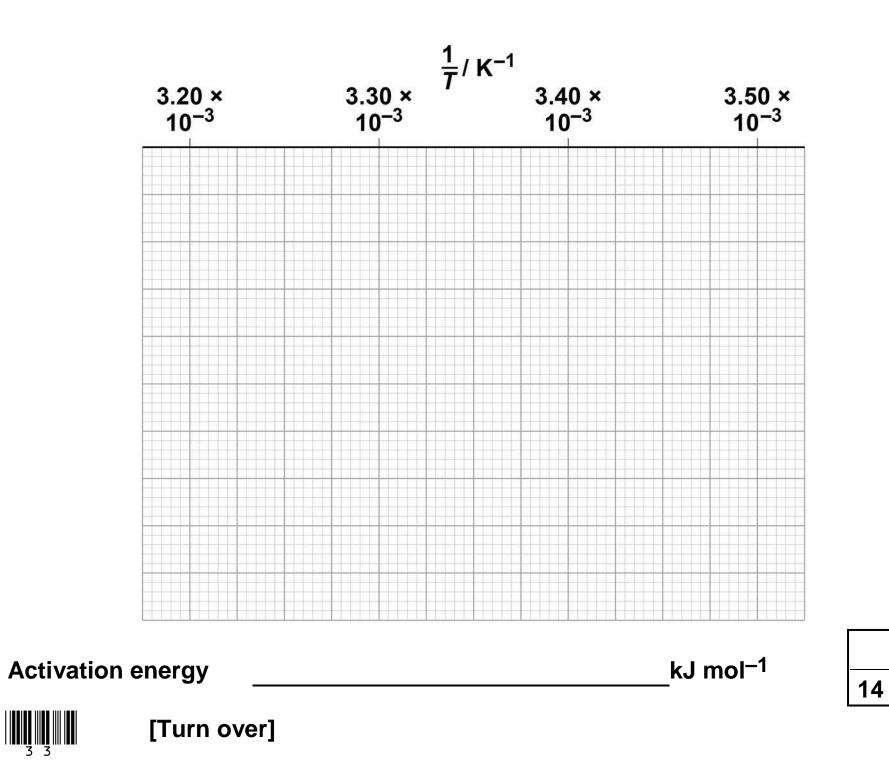

where C_1 and C_2 are constants.

```
Use values from TABLE 3, on page 31, to plot a graph of \ln \frac{1}{t} (y axis) against \frac{1}{\tau} on the grid.
```

Use your graph to calculate a value for the activation energy, in kJ mol⁻¹, for this reaction.

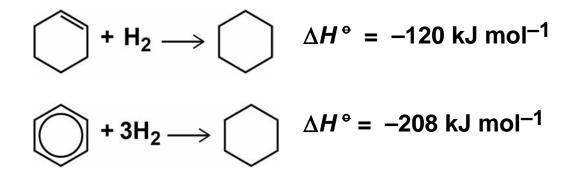

The value of the gas constant, $R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$ [6 marks]

Data about the hydrogenation of cyclohexene and of benzene are given.

0 6 . 1 Explain the bonding in and the shape of a benzene molecule. Compare the stability of benzene with that of the hypothetical cyclohexa-1,3,5-triene molecule.

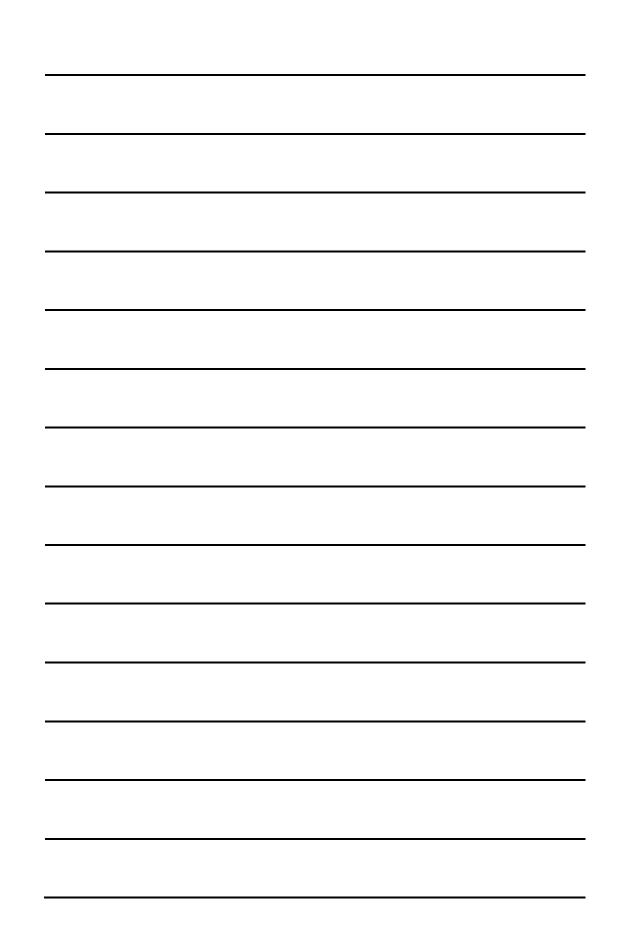

Use the data in your answer. [6 marks]

37

0 6 . 2 The enthalpy of hydrogenation of cyclohexa-1,3-diene is NOT exactly double that of cyclohexene. Suggest a value for the enthalpy of hydrogenation of cyclohexa-1,3-diene and justify your value. [3 marks]

0 7

Acyl chlorides are useful reagents in synthesis. They react with aromatic compounds and also with alcohols.

07.1 CH₃CH₂COCI reacts with benzene in the presence of AICI₃ in an electrophilic substitution reaction.

Give an equation for the reaction of CH_3CH_2COCI with $AICI_3$ to form the electrophile. Outline a mechanism for the reaction of this electrophile with benzene. [4 marks]

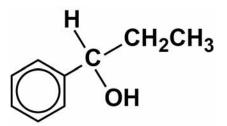

Equation

Mechanism

07.2	The organic product in Question 07.1 can be
	converted into the alcohol shown.

Give the IUPAC name of the alcohol. Give the reagent needed for this reaction and name the mechanism. [3 marks]

IUPAC name

Reagent

Name of mechanism

0 7 . 3 The alcohol shown in Question 07.2 reacts with ethanoyl chloride to form an ester.

> Describe what would be observed when the alcohol reacts with ethanoyl chloride. Name the mechanism for the reaction to form the ester.

Draw the structure of the ester. [3 marks]

Observation	
Name of mechanism	

Structure of ester

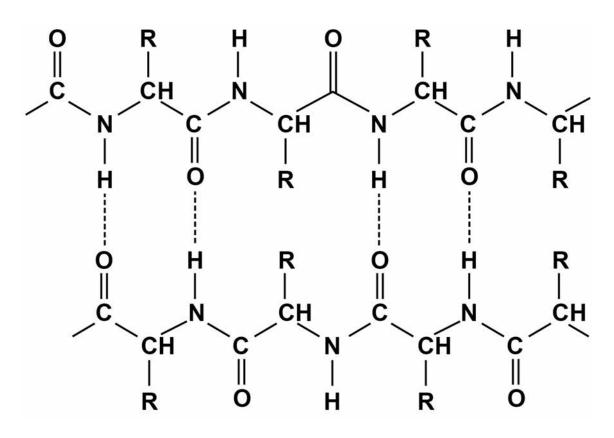

08

Use the Data Booklet to help you answer this question about amino acids. FIGURE 1 shows parts of two polypeptide chains in a beta-pleated sheet of a protein.

08.1 The polypeptide chains are held together by hydrogen bonding as shown in FIGURE 1.

Explain how these hydrogen bonds form. [2 marks]

08.2 A different type of bond can form between two polypeptide chains when the chains each contain the amino acid cysteine.

Complete the structure to show the bond that forms between the side chains of two cysteine molecules. [1 mark]

08.3 The type of bond in Question 08.2 between two polypeptide chains influences the three-dimensional structure of the protein.

Name this type of protein structure. [1 mark]

08.4 Draw the structure of the zwitterion of a dipeptide formed by alanine and serine. [2 marks]

Use the Data Booklet to help you answer this question about DNA.

FIGURE 2 shows a fragment of a DNA double helix.

The letters A, C, G and T represent the four bases in one strand.

The numbers 1, 2, 3, 4 and 5 represent the bases in the complementary strand.

FIGURE 2

Å	Ċ	Ġ	Ť	Ċ
1	2	3	4	5

0 9 . 1 Complete TABLE 4 to show the correct sequence of bases in the complementary strand represented by the numbers 1 to 5 [1 mark]

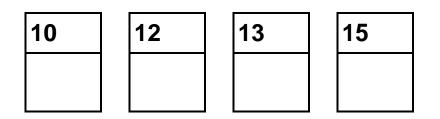

TABLE 4

1	2	3	4	5

09.2 Deduce the total number of hydrogen bonds formed between the five bases in each strand.

Tick (\checkmark) ONE box. [1 mark]

www.xtrapapers.com

50

Repeat of FIGURE 2

Å	Ċ	Ġ	•	Ċ
1	2	3	4	5

0 9 . 3 Base A is part of a nucleotide in the DNA strand shown in FIGURE 2. A nucleotide contains a 2-deoxyribose molecule.

An incomplete 2-deoxyribose molecule is shown.

Complete the structure to show the nucleotide that contains base A.

You should represent base A by the letter A. [2 marks]

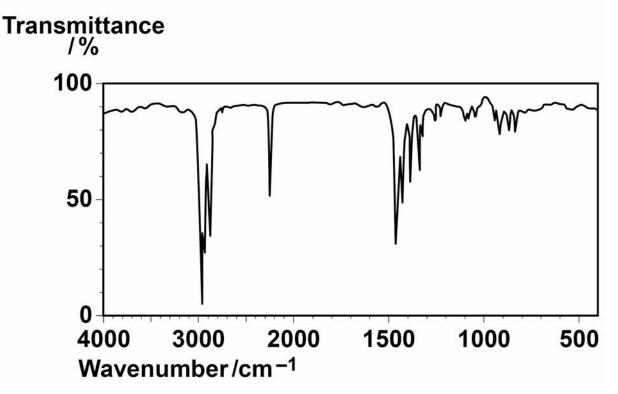

52

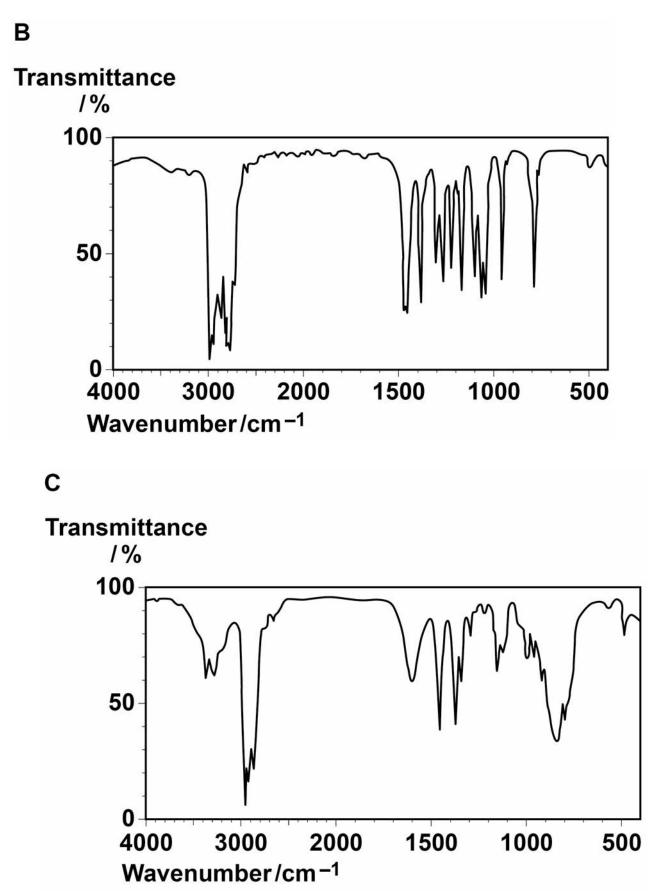

1 0 This question is about amines.

10.1 The infrared spectra A, B and C are those of a primary amine, a tertiary amine and a nitrile, but not necessarily in that order.

Α

BLANK PAGE

Give the letter of each compound in the correct box. [1 mark]

primary amine	tertiary amine	nitrile

10.2 There are THREE secondary amines that contain four carbon atoms per molecule.

Draw the skeletal formulas of these THREE secondary amines. [2 marks]

10.3 Primary amines can be prepared by the reaction of halogenoalkanes with ammonia or by the reduction of nitriles.

Justify the statement that it is better to prepare primary amines from nitriles rather than from halogenoalkanes. [2 marks]

1 0 . 4 Draw the structure of a primary amine with four carbon atoms that CANNOT be formed from a nitrile. [1 mark]

1 0 . 5 A student dissolves a few drops of propylamine in 1 cm^3 of water in a test tube.

> Give an equation for the reaction that occurs. Describe what is observed when Universal Indicator is added to this solution. [2 marks]

> Equation

Observation

1 0 . 6 Phenylamine can be prepared by a process involving the reduction of nitrobenzene using tin and an excess of hydrochloric acid.

> Give an equation for the reduction of nitrobenzene to form phenylamine. Use [H] to represent the reducing agent. Explain why an aqueous solution is obtained in this reduction even though phenylamine is insoluble in water. [2 marks]

Equation			
Explanation			

BLANK PAGE

There are several isomers with the molecular formula $C_6H_{16}N_2$

1 1.1 One isomer is shown.

$$\begin{array}{c} H_{3}C-CH_{2} \\ H_{3}C-CH_{2} \end{array} \overset{a}{\searrow} N-CH_{2}-CH_{2}-NH_{2} \\ \end{array}$$

Give the number of peaks in the ¹³C NMR spectrum of this isomer.

State and explain the splitting pattern of the peak for the hydrogens labelled a in its ¹H NMR spectrum. [3 marks]

Number of ¹³ C peaks _	
Splitting pattern	
Explanation	

11.2 Draw the structure of the isomer of $C_6H_{16}N_2$ used to make nylon 6,6 [1 mark]

1 1 . 3 Draw the structure of the isomer of C₆H₁₆N₂ that contains two PRIMARY amine groups and has only two peaks in its ¹³C NMR spectrum. [1 mark]

11.4 Draw the structure of the isomer of C₆H₁₆N₂ that contains two TERTIARY amine groups and has only two peaks in its ¹³C NMR spectrum. [1 mark]
