## UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education

**CHEMISTRY** 

Paper 3 (Extended)

0620/03

October/November 2006

1 hour 15 minutes

Candidates answer on the Question Paper. No Additional Materials required.

Candidate Name					
0. 1				Ī	
Centre Number			Candidate Number		

## **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen in the spaces provided on the Question Paper.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN THE BARCODE.

DO NOT WRITE IN THE GREY AREAS BETWEEN THE PAGES.

Answer all questions.

The number of marks is given in brackets [ ] at the end of each question or part question.

A copy of the Periodic Table is printed on page 16.

1 Choose a gas from the following list to answer the questions below. Each gas may be once, more than once or not at all.

ammonia	argon	carbon dioxide	carbon monoxide	chlorine
ethene	hydrogen	nitrogen	oxygen	
Which gas				
is a noble	gas,			
is an acidio	oxide,			
oon ho nol	ymoriood			
can be por	ymenseu,			
	ethene Which gas is a noble g		ethene hydrogen nitrogen  Which gas is a noble gas,  is an acidic oxide,	ethene hydrogen nitrogen oxygen  Which gas is a noble gas,  is an acidic oxide,

(v) is used in the treatment of water,

(iv) is the active component of air,

(vi) is a product of respiration?

[6]

2 The table shows the melting points, boiling points and electrical properties of substances A to F.

1	Tax
	36
•	On

substance	melting point / °C	boiling point / °C	electrical conductor at room temperature	electrical conductor of substance dissolved in water
Α	961	2193	good	does not dissolve
В	113	444	does not conduct	does not dissolve
С	0	100	very poor	very poor
D	803	1465	does not conduct	good
E	–5 to -10	102 to 105	good	good
F	-85	-60	does not conduct	does not dissolve

(i)	Which three substances are solids at room temperature?	
		[1]
(ii)	Which <b>one</b> is an ionic compound?	[1]
(iii) 	Which <b>one</b> is a gas at room temperature?	[1]
(iv)	Which <b>two</b> substances are liquids at room temperature?	[1]
(v)	Which substance is a metal?	[1]
	Which <b>one</b> is an impure substance?	[41
		[1]

Calcium carbonate is an important raw material.	For
(a) Name a rock which is made up of calcium carbonate.	ner's
Calcium carbonate is an important raw material.  (a) Name a rock which is made up of calcium carbonate.  [1]	Se.Co.
	777
(b) When calcium carbonate is heated strongly, it decomposes. $CaCO_3 \to CaO + CO_2$	
(i) Calculate the relative formula mass of:	, L
CaCO <sub>3</sub>	
CaO[2]	
(ii) 7.00 kg of calcium oxide was formed. What mass of calcium carbonate was heated?	
[2]	
(c) Calcium carbonate is used to control soil acidity.	
(i) Why is it important to control soil acidity?	
[1]	
(ii) Both calcium carbonate, insoluble in water, and calcium oxide, slightly soluble, are used to increase soil pH. Suggest <b>two</b> advantages of using calcium carbonate.	
[2]	
(iii) Give <b>one</b> use of calcium carbonate other than for making calcium oxide and controlling soil pH.	
[1]	

[2]

[1]

Minimising air pollution is essential for health and for the environment.

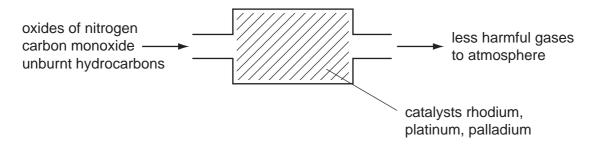

(a) Natural gas is methane	(a)	Natural Natural	gas	is	methane
----------------------------	-----	-----------------	-----	----	---------

	www.xt	rapapers.com
	5 A. Par	
imis	sing air pollution is essential for health and for the environment.	For inor's
Nat	tural gas is methane.	THAT WE'S
(i)	Write the equation for complete combustion of methane.	36.CO
		[2]

(ii)	Explain why it is dangerous to use a gas fire in a poorly ventilated room.

(b)	Low sulphur fuels are being introduced. Ordinary diesel contains 500 ppm of sulphur but low sulphur diesel contains less than 50 ppm. Why is this an advantage to the environment?

(c) Catalytic converters reduce pollution from motor vehicles, as shown in the following diagram.

(i)	What type of elements are the metals rhodium, platinum and palladium?

(ii) Rhodium catalyses the decomposition of the oxides of nitrogen.

$$2NO \rightarrow N_2 + O_2$$

Two other pollutants are carbon monoxide and unburnt hydrocarbons. How are they made into less harmful substances?

 [2]

5 Ammonia is manufactured by the Haber Process.

$$N_2(g) + 3H_2(g) \rightleftharpoons 2NH_3(g)$$
  
200 atmospheres  
450°C

6

The forward reaction is exothermic.

(a)	(i)	What is the catalyst for this reaction?	
			[1]
	(ii)	Newer catalysts have been discovered for this process. Using these catalysts, operating temperature is lowered from 450°C to 400°C. What is the advantage using a lower temperature? Explain your answer.	
		advantage	
		explanation	
			[2]
(b)	the	er passing over the catalyst, the mixture contains 15% of ammonia. It is cooled a ammonia liquefies and is separated from the unreacted nitrogen and hydrogey are recycled.	
	(i)	How are the gases recycled?	
			[1]
	(ii)	Only ammonia gas liquefies. Suggest an explanation for this.	
			[1]
(c)		ea, $CO(NH_2)_2$ , is one of the fertilisers manufactured from ammonia. monia is heated with carbon dioxide.	
	(i)	Write an equation for the manufacture of urea.	
			[2]
	(ii)	Explain why urea on its own might not be very effective in promoting crop growth	١.
			[1]

(d) Give a diagram showing the arrangement of the valency electrons in one mole the covalent compound urea. Its structural formula is given below.

$$O = C \underbrace{\setminus_{N \overset{H}{\leftarrow}_{H}}^{N \overset{H}{\leftarrow}_{H}}}_{N \overset{H}{\leftarrow}_{H}}$$

Use o to represent an electron from a carbon atom. Use x to represent an electron from a hydrogen atom. Use • to represent an electron from a nitrogen atom.

An ore of copper is the mineral, chalcopyrite. This is a mixed sulphide of iron and co 6

(a) Analysis of a sample of this ore shows that 13.80 g of the ore contained 4.80 g copper, 4.20 g of iron and the rest sulphur. Complete the table and calculate the empirical formula of chalcopyrite.

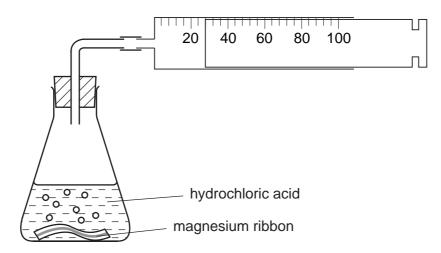

and column and column and 4.80 g

	copper	iron	sulphur
composition by mass/g	4.80	4.20	
number of moles of atoms			
simplest mole ratio of atoms			

	The	e empirical formula is	[3]
	•••••		[1]
(b)	Imp	oure copper is extracted from the ore. This copper is refined by electrolysis.	
	(i)	Name; the material used for the positive electrode (anode),	
		the material used for the negative electrode (cathode),	
		a suitable electrolyte.	
			[3]
	(ii)	Write an ionic equation for the reaction at the negative electrode.	
			[1]
	(iii)	One use of this pure copper is electrical conductors, another is to make allowante the metal that is alloyed with copper to make brass.	ys.
			[1]

(c)	Two of the elements in chalcopyrite are the metal, copper, and the non-metal, so These have different properties. Copper is an excellent conductor of electricity at malleable. Sulphur is a poor conductor and is not malleable, it is brittle. Explain terms of their structures, why this is so.  difference in electrical conductivity	aCam,	Pers.com For iner's
		 [2]	
	difference in malleability		

- The rate of a reaction depends on concentration of reactants, temperature and pos 7 catalyst or light.
- and post For iner's drochloric acid. easured every (a) A piece of magnesium ribbon was added to 100 cm<sup>3</sup> of 1.0 mol/dm<sup>3</sup> hydrochloric acid. The hydrogen evolved was collected in a gas syringe and its volume measured every 30 seconds.

In all the experiments mentioned in this question, the acid was in excess. The results were plotted to give a graph.

	(i)	The experiment was repeated. Two pieces of magnesium ribbon were at 100 cm³ of 1.0 mol/dm³ hydrochloric acid. Sketch this graph on the same grid label it X. [2]
	(ii)	The experiment was repeated using one piece of magnesium ribbon and 100 cm <sup>3</sup> of 1.0 mol/dm <sup>3</sup> ethanoic acid. Describe how the <b>shape</b> of this graph would differ from the one given on the grid.
		[2]
(b)		action rate increases when concentration or temperature is increased. ng the idea of reacting particles, explain why;
	incr	reasing concentration increases reaction rate,
		[2]
	incr	reasing temperature increases reaction rate.
		[2]
(c)		e rate of a photochemical reaction is affected by light. A reaction, in plants, between bon dioxide and water is photochemical.
	(i)	Name the <b>two</b> products of this reaction.
		[2]
	(ii)	This reaction will only occur in the presence of light and another chemical. Name this chemical.
		[1]

[1]

- 8 The three types of food are carbohydrates, proteins and fats.
  - **(a)** Aqueous starch is hydrolysed to maltose by the enzyme amylase. The formula of maltose is:

Starch is hydrolysed by dilute sulphuric acid to glucose.

(i)	What	is	an	enzyme?
-----	------	----	----	---------

[1]

(ii) Draw the structure of starch.

(iii) Name the technique that would show that the products of these two hydrolyses are different.

[1]

- **(b)** Proteins have the same linkage as nylon but there is more than one monomer in the macromolecule.
  - (i) Draw the structure of a protein.

[2]

(ii) What class of compound is formed by the hydrolysis of proteins?

	W.W.	ctrapapers.com
	13	
c) Fat	ts are esters. Some fats are saturated, others are unsaturated.	For
(i)	Write the word equation for the preparation of the ester, propyl ethanoate.	(trapapers.com
(ii)	Deduce the structural formula of this ester showing each individual bond.	Onn
(iii)	How could you distinguish between these two fats?	[2]
` ,	Fat 1 has the formula	
	CH <sub>2</sub> – CO <sub>2</sub> – C <sub>17</sub> H <sub>33</sub>	
	CH – CO <sub>2</sub> – C <sub>17</sub> H <sub>33</sub>	
	$CH_2 - CO_2 - C_{17}H_{33}$ For 2 has the formula	
	Fat 2 has the formula $CH_2 - CO_2 - C_{17}H_{35}$	
	   CH – CO <sub>2</sub> – C <sub>17</sub> H <sub>35</sub>	
	$ $ $CH_2 - CO_2 - C_{17}H_{35}$	
	test	
	result with fat 1	
	result with fat 2	. [3]
(iv)	Both of these fats are hydrolysed by boiling with aqueous sodium hydroxide. type of compounds are formed?	What
	and	[2]
