Paper 2	May/June 2009

CANDIDATE NUMBER

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may need to use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

A copy of the periodic table is printed on page 16.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 15 printed pages and 1 blank page.

1 (a) Choose from the list of compounds to answer questions (i) to (v).

hydrogen chloride calcium carbonate carbon dioxide iron(III) oxide lead(II) bromide methane sodium hydroxide

Each compound can be used once, more than once or not at all.

Name the compound which

(i)	is a transition metal compound,	
		[1]
(ii)	produces brown fumes at the anode when electrolysed,	
		[1]
(iii)	is used to manufacture lime,	
		[1]
(iv)	dissolves in water to form an alkaline solution,	
		[1]
(v)	is the main constituent of natural gas.	
		Γ1 ⁻

(b) At a high temperature iron(III) oxide is reduced by carbon.

to form _____ .

					www.xtrapape
			3		by carbon.
At a	a high temperature	iron(III) oxic	le is reduced by ca	arbon.	A Car
	Fe ₂	O ₃ + 3C	——→ 2Fe	+ 3CO	Abrio
(i)	Explain how the	equation sho	ws that iron(III) ox	ide is reduced b	y carbon.
					[1]
(ii)	Complete these s	entences ab	out the extraction	of iron using wo	rds from the list.
	bauxite	blast	converter	haematite	lime
	limes	tone	sand		slag
	Iron is extracted f	rom		by mixing t	he ore with
	coke and		in a		furnace

The iron ore is reduced to iron and impurities in the ore react with calcium oxide

[Total: 10]

[4]

The table shows some observations about the reactivity of various metals with 2 hydrochloric acid.

	4
ne table shows some /drochloric acid.	observations about the reactivity of various metals with here's observations many bubbles produced rapidly with much spitting
metal	observations
calcium	many bubbles produced rapidly with much spitting
copper	no bubbles formed
iron	a few bubbles produced very slowly
magnesium	many bubbles produced rapidly with no spitting

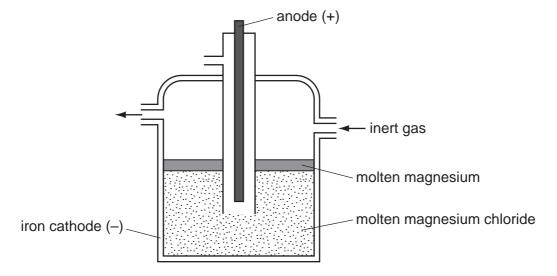

(a) Put these metals in order of their reactivity.

most reactive —		→	least reactive	
				[1]

(b) Zinc is between iron and magnesium in its reactivity. Suggest what observations are made about how fast the bubbles are produced when zinc reacts with dilute hydrochloric acid.

[1]

(c) Magnesium is extracted by the electrolysis of molten magnesium chloride.

(i) What information in the diagram suggests that magnesium is less dense than molten magnesium chloride?

	(ii)	Suggest why ma its oxide with ca		be extracted by	electrolysis rather than by	Can
						[1]
	(iii)	Suggest why a magnesium.	stream of ine	rt gas is blown	over the surface of the mo	lten
						[1]
	(iv)	State the name	of a gaseous ele	ement which is ine	ert.	
						[1]
(d)	ma	ome old magnes gnesium. e list shows the m			as is blown over the surface of	the
		carbon mo	noxide	ethene	hydrogen	
			hydrogen	sulfide	methane	
	(i)	Draw the structu	ire of ethene sh	owing all atoms a	nd bonds.	
						[1]
	(ii)	Suggest two hathe list.	nzards of using	coal gas by referi	ring to two specific substance:	
	(ii)		nzards of using	coal gas by referi	ring to two specific substance:	
	(ii)	the list.	zards of using	coal gas by refer	ring to two specific substance	
	(ii)	the list.	nzards of using	coal gas by refer	ring to two specific substance:

A mixture of ammonium sulfate and sodium hydroxide was warmed in a test-tube. The gas was tested with moist red litmus paper.

(a) State the name of the gas releas	ed.
--------------------------------------	-----

L	IJ

(b) State the colour change of the litmus paper.

(c) Complete the word equation for the reaction of ammonium carbonate with hydrochloric acid.

ammonium	+	hydrochloric	 +	 +	
carbonate		acid			
					[3]

- (d) Ammonium salts such as ammonium nitrate, NH₄NO₃ and ammonium chloride NH₄C*l* are used as fertilisers.
 - (i) Explain why farmers need to use fertilisers.

[1]

(ii) Explain why ammonium nitrate is a better fertiliser than ammonium chloride.

_____[1

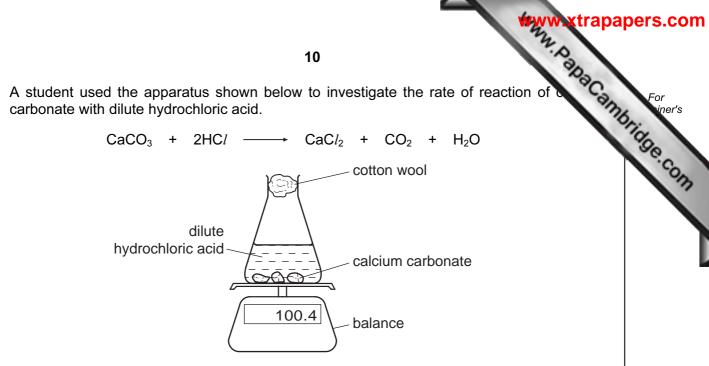

(iii) Calculate the relative formula mass of ammonium nitrate.

	0		
₹	0	0	
7	1	64	
		C	2
	7	4	%

		[1]
(e)	When ammonium nitrate is heated nitrogen(I) oxide is given off. Nitrogen(I) oxide relights a glowing splint. Name one other gas which relights a glowing splint.	
		[1]
(f)	State one harmful effect of nitrogen oxides on the environment.	
		[1]
	[Total:	10]

5

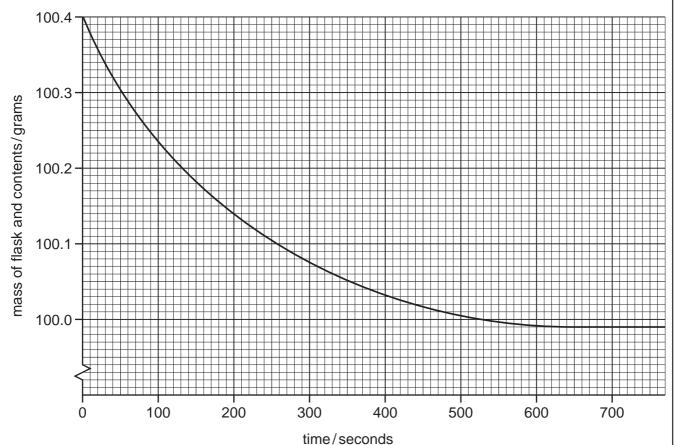

(a)	Use the information	in the	equation	to suggest	why tl	he mass	of the	flask	and	contents
	decreases with time									

[4]	1

(b) The graph shows how the mass of the flask and its contents changes with time.

	(i)	At what time was the reaction just complete?	For iner's vas [1]							
	(iii)	The student repeated the experiment but altered the concentration of hydrochloric acid so that it was half the original value. In both experiments calcicarbonate was in excess and all other conditions were kept the same.								
		On the graph on page 10, draw a curve to show how the mass of the flask a contents changes with time when hydrochloric acid of half the concentration wased.								
(c)	Hov	v does the speed (rate) of this reaction change when								
	(i)	the temperature is increased,	[1]							
	(ii)	smaller pieces of calcium carbonate are used?	[1]							
(d)		mplete the following sentence using words from the list.								
	С	ombustion expansion large rapid slow small	ı							
	In fl	our mills there is often the risk of an explosion due to the rapid								
	of tl	ne very particles which have a very								
		surface area to react.	[3]							
(e) Cells in plants and animals break down glucose to carbon dioxide and water.										
glucose + oxygen — → carbon dioxide + water										
	(i)	State the name of this process.								
			[1]							
	(ii)	In this process enzymes act as catalysts. What do you understand by the term catalyst?								
			[1]
