

Candidates answer on the Question Paper.

Additional Materials: As listed in the Confidential Instructions

## READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.Write in dark blue or black pen.You may use a pencil for any diagrams, graphs or rough working.Do not use staples, paper clips, highlighters, glue or correction fluid.DO **NOT** WRITE IN ANY BARCODES.

Answer **all** questions. Electronic calculators may be used. Practical notes are provided on page 8. You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [] at the end of each question or part question.

ts with 1 You are going to investigate what happens when aqueous sodium hydroxide reacts with

### Read all the instructions below carefully before starting the experiments.

### Instructions

You are going to carry out two experiments.

(a) Experiment 1

Use a measuring cylinder to pour 25 cm<sup>3</sup> of acid K into a conical flask. Add five drops of phenolphthalein to the flask.

Fill the burette with the aqueous sodium hydroxide to the 0.0 cm<sup>3</sup> mark. Slowly add the aqueous sodium hydroxide to acid **K** in the flask and shake the mixture. Continue to add aqueous sodium hydroxide to the flask until the solution shows a permanent colour change.

Measure and record the volume in the table. Complete the table. Pour the solution away and rinse the conical flask.

	burette reading
final volume/cm3	
initial volume/cm <sup>3</sup>	
difference / cm <sup>3</sup>	

[3]

#### (b) Experiment 2

Use a measuring cylinder to pour 50 cm<sup>3</sup> of acid K into a conical flask. Add the 0.3 g of powdered calcium carbonate to the flask and shake the flask until no further reaction is observed.

Add five drops of phenolphthalein to the mixture in the flask.

Fill the burette with aqueous sodium hydroxide and record the burette reading. Slowly add aqueous sodium hydroxide from the burette to the flask and shake the mixture. Continue to add aqueous sodium hydroxide to the flask until the solution shows a permanent colour change.

Measure and record the volume in the table. Complete the table.

## NOTES FOR USE IN QUALITATIVE ANALYSIS

### Test for anions

8 NOTES FOR USE IN QUALITATIVE ANALYSIS Test for anions anion test test result contenants (CO 2) and dilute acid		
anion	test	test result
carbonate (CO <sub>3</sub> <sup>2–</sup> )	add dilute acid	effervescence, carbon dioxide produced
chloride (C <i>l</i> <sup>-</sup> ) [in solution]	acidify with dilute nitric acid, then add aqueous silver nitrate	white ppt.
iodide (I⁻) [in solution]	acidify with dilute nitric acid, then add aqueous silver nitrate	yellow ppt.
nitrate (NO <sub>3</sub> <sup>-</sup> ) [in solution]	add aqueous sodium hydroxide then aluminium foil; warm carefully	ammonia produced
sulfate (SO <sub>4</sub> <sup>2–</sup> ) [in solution]	acidify with dilute nitric acid, then aqueous barium nitrate	white ppt.

## Test for aqueous cations

cation	effect of aqueous sodium hydroxide	effect of aqueous ammonia
aluminium (Al <sup>3+</sup> )	white ppt., soluble in excess giving a colourless solution	white ppt., insoluble in excess
ammonium (NH <sub>4</sub> +)	ammonia produced on warming	-
calcium (Ca <sup>2+</sup> )	white ppt., insoluble in excess	no ppt., or very slight white ppt.
copper (Cu <sup>2+</sup> )	light blue ppt., insoluble in excess	light blue ppt., soluble in excess giving a dark blue solution
iron(II) (Fe <sup>2+</sup> )	green ppt., insoluble in excess	green ppt., insoluble in excess
iron(III) (Fe <sup>3+</sup> )	red-brown ppt., insoluble in excess	red-brown ppt., insoluble in excess
zinc (Zn <sup>2+</sup> )	white ppt., soluble in excess giving a colourless solution	white ppt., soluble in excess giving a colourless solution

## **Test for gases**

gas	test and test results
ammonia (NH <sub>3</sub> )	turns damp red litmus paper blue
carbon dioxide (CO <sub>2</sub> )	turns limewater milky
chlorine (C $l_2$ )	bleaches damp litmus paper
hydrogen (H <sub>2</sub> )	'pops' with a lighted splint
oxygen (O <sub>2</sub> )	relights a glowing splint
