	IGCSE EXAMINATIONS – JUNE 2003	0420, 0421, 0422, 7010

1 Generally, one mark for each valid point. Two examples gain two marks:

(a) *check sum*

adding all the elements of a block/bytes/string/instructions in a program  
produces a single number/value  
which is stored with the block  
meaningless total  
e.g. hash total

[2]

(b) *relational database*

contents of files are linked/data held in a number of interrelated files or  
relations  
by common fields  
uses tables  
e.g. one to many relationships

[2]

(c) *random access memory (RAM)*

memory that can be read from  
and written to/changed/alterd  
stores data/programs  
directly addressable  
volatile/temporary memory

[2]

(d) *top-down design*

breaking down the problem/task/program  
into sub problems/smaller tasks/modules  
stepwise refinement

[2]

(e) *alphanumeric characters*

letters of the alphabet (alphabetic)  
plus numbers/digits 0 to 9  
includes characters, e.g. punctuation, +, ?

	maximum mark available	minimum mark required for grade:			
		A	C	E	F
Component 1	100	66	47	23	18

The threshold (minimum mark) for B is set halfway between those for Grades A and C.  
The threshold (minimum mark) for D is set halfway between those for Grades C and E.  
The threshold (minimum mark) for G is set as many marks below the F threshold as the E threshold is above it.

Grade A\* does not exist at the level of an individual component.
