Paper 2 Structured Questions

**October/November 2020**

MARK SCHEME

Maximum Mark: 90

---

**Published**

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2020 series for most Cambridge IGCSE™, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

---

This document consists of **23** printed pages.

**PUBLISHED****Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

**GENERIC MARKING PRINCIPLE 1:**

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

**GENERIC MARKING PRINCIPLE 2:**

Marks awarded are always **whole marks** (not half marks, or other fractions).

**GENERIC MARKING PRINCIPLE 3:**

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

**GENERIC MARKING PRINCIPLE 4:**

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

**GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

**GENERIC MARKING PRINCIPLE 6:**

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks	Guidance
1(a)	<p><b>Calculate the percentage of total world output of palm oil produced by Indonesia in 2017.</b></p> <p>60% (1).</p>	1	Accept 60.
1(b)	<p><b>Identify <u>two</u> variable costs of producing palm oil.</b></p> <ul style="list-style-type: none"> <li>• fertilisers</li> <li>• palm oil seeds</li> <li>• casual labour</li> </ul>	2	If more than two are given, consider the first two only. Accept 'labour', 'workers' or 'wages' for 'casual labour'.
1(c)	<p><b>Explain <u>one</u> opportunity cost of conserving forests in Indonesia.</b></p> <p>Logical explanation which might include: Palm oil not produced / rice not produced / tourism lost as a result of building fewer hotels / lost opportunity to Norwegian government to spend on e.g. education (1) (next) best alternative forgone (1).</p>	2	
1(d)	<p><b>Explain <u>two</u> external costs of the destruction of forests in Indonesia.</b></p> <p>Logical explanation which might include: Loss of wildlife habitats (1) extinction of species / harmful effect on animals not involved in the economic decision (1). Harmful gases/air pollution/pollution (1) unpleasant atmosphere for local residents / illnesses / global warming (1).</p>	4	One mark for each of two costs identified and one mark for each of two explanations.

Question	Answer	Marks	Guidance
1(e)	<p><b>Draw a demand and supply diagram to show the effect of a ban on burning stubble on the market for rice.</b></p> <p>Axes correctly labelled – price and quantity or p and q (1).                      Demand and supply curves correctly labelled (1).                      Supply curve shifted to the left (1).                      Equilibriums – shown by lines <math>P_1</math> and <math>Q_1</math> and <math>P_2</math> and <math>Q_2</math>, or by labelling equilibrium points as <math>E_1</math> and <math>E_2</math> (1).</p>	4	 <p>For quantity label accept Q, quantity demanded, quantity supplied.                      Do not reward a completely macro diagram.</p>

Question	Answer	Marks	Guidance
1(f)	<p><b>Analyse the relationship between countries' GDP per head ranking and HDI ranking.</b></p> <p>Coherent analysis which might include:</p> <p>Expected relationship: Generally, the higher the GDP per head ranking, the higher the HDI ranking / positive relationship / direct relationship (1).</p> <p>Supporting evidence: The top country, the top two or top three countries with the highest GDP per head ranking have the highest HDI ranking (1) the country, two countries with the lowest GDP per head ranking have the lowest HDI ranking (1).</p> <p>Exception: Cuba or Indonesia (1) <i>supportive data</i> – Cuba has a lower GDP per head ranking than Indonesia but a higher HDI ranking than Indonesia (1).</p> <p>Analysis: It is the expected relationship (1). GDP is a component of HDI / HDI ranking influenced by additional factors – education and/or life expectancy / higher GDP per head enables more to be spent on education and healthcare (1).</p>	5	<p>HDI now includes years of schooling but accept an idea that it includes education - adult literacy rate was included in the old measure.</p> <p>Responses do not have to be in the format suggested but they should address the expected/normal relationship, offer supporting evidence of that, highlight any exceptions to that, and analyse the overall data.</p>

Question	Answer	Marks	Guidance
1(h)	<p><b>Discuss whether or not the Indonesian tourism industry will increase in the future.</b></p> <p>Up to 4 marks for why it might:</p> <ul style="list-style-type: none"> <li>• it is currently price competitive (1)</li> <li>• if the exchange rate continues to fall (1), price of tourism for foreign visitors will fall (1)</li> <li>• it has natural tourist attractions (1) may preserve forests (1)</li> <li>• global economy is growing (1), incomes are rising (1) enabling foreigners to afford more holidays (1)</li> <li>• people coming from abroad to work in high paid jobs may be skilled / highly motivated (1) raise quality of tourism (1).</li> <li>• Indonesian government may subsidise the tourism industry (1) lowering costs of production (1).</li> <li>• the industry may be promoted /advertised (1)</li> <li>• air travel is falling in price (1) air travel is a complement to holidays (1)</li> <li>• foreign investment may be attracted into the industry (1)</li> </ul> <p>Up to 4 marks for why it might not:</p> <ul style="list-style-type: none"> <li>• pollution may discourage visitors (1) worried about health (1)</li> <li>• there are substitutes (1) Indonesia has competition from neighbouring countries (1)</li> <li>• natural areas of beauty may be destroyed (1) by e.g. new palm oil plantations / natural disasters (1)</li> <li>• net emigration (1) may mean there are not enough workers (1).</li> <li>• Covid-19 may continue to reduce tourism (1).</li> </ul>	<b>6</b>	

**PUBLISHED**

Question	Answer	Marks	Guidance
2(a)	<p><b>Define <i>trade in goods balance</i>.</b></p> <p>Value of exports of goods / revenue earned from exports minus value of imports of goods / expenditure on imports of goods (2).            Exports minus imports (1) of goods / visible items (1).</p>	<b>2</b>	Accept exports (of goods) = imports of (goods) for 1 mark
2(b)	<p><b>Explain <u>two</u> benefits producers may gain from free trade.</b></p> <p>Logical explanation which might include:            Availability of larger/global market (1) may increase revenue/profit (1).            Ability to produce on a larger scale / higher output (1) take advantage of economies of scale (1) specialise (1).            Access to cheaper / better quality raw materials / raw materials without tariffs imposed on them (1) lowering costs of production/raising quality of products produced/lowering price (1).            Access to advanced technology/ideas from abroad (1) resulting in improved methods of production/new products (1).            Increased competitive pressure (1) which may raise efficiency (1).</p>	<b>4</b>	One mark for each of two benefits identified and one mark for each of two explanations.

Question	Answer	Marks	Guidance
2(c)	<p><b>Analyse, using a production possibility curve (PPC) diagram, the effect of an increase in unemployment on an economy.</b></p> <p>Up to 4 marks for the diagram:                      Axes correctly labelled (1).                      Curve drawn as a curve or downward sloping line to the axes (1).                      Two production points shown – one on or to left of PPC and the other further to the left of the PPC (1).                      Movement of the production point inwards indicated by arrow or lettering (1).</p> <p>Up to 2 marks for coherent analysis which might include:                      Unemployment means resources are not used (1) there is inefficiency (1) reduces output/GDP / causes a recession (1).</p>	6	 <p>For analysis, only accept a PPC shifted inwards if logical justification is given i.e. an increase in unemployment may cause some workers to leave the labour force – ‘unemployment causing unemployment’.</p>

Question	Answer	Marks	Guidance
2(d)	<p>Example of L3 answer:</p> <p><i>Due to an increase in the rate of income tax, inflation may fall as disposable income will fall. People will have less money to spend so they may spend less and total demand will fall. A fall in demand will cause prices to fall as producers will not be able to sell as many goods and services. They will want to keep their market share. Demand-pull inflation will decrease.</i></p> <p><i>However, an increase in income tax may not cause inflation to fall. Workers may force up the wage rate. Firms' labour cost and costs of production will increase so firms may push up prices to maintain profits. This can cause cost-push inflation and a wage price spiral. Plus, government revenue from high taxes will rise and government spending may rise. This may offset the fall in consumer expenditure and inflation may not fall.</i></p> <p>Principal Examiner comment: Strong on both sides.</p> <p>Example of L1 answer:</p> <p><i>Inflation refers to the fall in the purchasing power of money. Income tax is a payment to the government. The increase in direct tax will definitely help the government. This may help the government solve the problem of inflation and will increase the purchasing power of money.</i></p> <p>Principal Examiner comment: Definitions given but the answer does not explain why inflation may, or may not, be reduced.</p>

Question	Answer	Marks	Guidance
3(a)	<p><b>Define <i>demerit good</i>.</b></p> <p>A product which is more harmful to consumers than they realise / the government considers is more harmful (2).            It is over-consumed / overproduced (1) it creates external costs (1).            A product that is harmful (1).</p>	<b>2</b>	
3(b)	<p><b>Explain the difference between an extension in demand and an increase in demand.</b></p> <p>Logical explanation which might include:            An extension in demand is caused by a change in the price of the product (1) rise in quantity demanded (1) it is shown by a movement along the demand curve (1).            An increase in demand is caused by a change in an influence on demand other than a change in the price of the product / means more is demanded at each and every price (1) example of a cause of an increase in demand e.g. rise in incomes (1) it is shown by a shift in the demand curve (1).</p>	<b>4</b>	<p>Up to 2 marks for diagram(s) showing the difference.</p> <p>Maximum of 2 marks for extension in demand and a maximum of 2 marks for an increase in demand.</p>

**PUBLISHED**

Question	Answer	Marks	Guidance
3(c)	<p><b>Analyse the effects on income distribution and tax revenue of an increase in indirect taxes.</b></p> <p>Coherent analysis which might include:            Income is likely to become less evenly distributed (1)            indirect taxes are usually regressive (1) taking a larger percentage of income of the poor (1).            Tax revenue likely to rise (1) will rise more on goods with inelastic demand (1) e.g. food (1) may fall if demand falls significantly (1).            If any extra tax revenue is spent on lower income groups (1) e.g. welfare benefits (1) the effect on income distribution is less certain / income may be more evenly distributed (1).            Tax evasion and avoidance is less common in the case of indirect taxes (1) though there may be informal markets (1).</p>	6

4(c)	<p><b>Analyse the possible causes of a rise in the wages of bank workers.</b></p> <p>Coherent analysis which might include:            Demand for bank workers may increase (1) due to higher demand for banking / this may result from more people opening bank accounts/using the services of banks (1) may also result from a rise in the productivity of workers (1) more banks competing for the services of bank workers / more competition for workers (1) higher wages paid to retain bank workers (1).            Supply of bank workers may fall (1) qualifications may have been increased (1) skills may have increased / may need to be more skilled as working with more advanced technology (1).            Bank workers may use trade union power (1) collective bargaining and/or industrial action (1).            Banks may have earned large profits (1) may have rewarded workers with bonuses (1) bonuses / high pay may be used to motivate workers (1).            A higher national minimum wage (1) forcing banks to pay some of their staff more (1).            Bank workers may work longer hours / may work overtime (1).            Bank workers may be more experienced (1) more productive / more skilled (1).            Inflation / higher income tax (1) purchasing power will fall unless wages increased (1).</p>	6

Question	Answer	Marks	Guidance
4(d)	<p>Example of an L2 answer:</p> <p><i>Demand for cars may become more price-elastic. People may be more willing to switch to substitutes. If bus transportation reduced market prices, people may use buses rather than buying cars when prices of cars rise. On the other hand, cars may be price-inelastic in the future. They may become more of a necessity if people find buses and trains inconvenient. Cars also show a better standard of living and many jobs require a car which makes having a car a necessity therefore it becomes price-inelastic.</i></p> <p>Principal Examiner comment: Reasonable on both sides.</p>		<p>Reward answers that give an argument from the opposite perspective but do not double award.</p>

5(a)	<p><b>Define wages.</b></p> <p>A payment/reward (1) to labour/workers (1).</p>	2	
5(b)	<p><b>Explain <u>two</u> reasons, other than methods of protection, why a country's exports may fall.</b></p> <p>Logical explanation which might include:            Lower incomes abroad (1) reduce the ability of foreigners to buy the country's exports / lower demand (1).            Rise in the foreign exchange rate (1) will make exports more expensive (1).            Quality may fall (1) e.g. educational standards may have declined (1).            Price may rise (1) due to inflation/higher costs of production/lower productivity/making exports less competitive (1).            Domestic demand may rise (1) products may be switched from the export to the home market (1).            Lower output (1) reduce the ability of firms to export as many goods and services / result of fewer resources (1).</p>	4	One mark for each of two reasons identified and one mark for each of two explanations.

Question	Answer	Marks	Guidance
5(d)	<p>Example of L3 answer:</p> <p><i>A floating exchange rate changes with changes in demand and supply. A country should switch from a fixed foreign exchange rate system to a floating exchange rate system as there will be no need to keep foreign reserves so it can spend foreign reserves on something else. A country can easily change monetary policy changing interest rate without being worried. It can concentrate on other aims and not the exchange rate. Floating exchange rate automatically adjust current account of the balance of payments as increase in demand for exports will increase exchange rate reducing demand on exports.</i></p> <p><i>A country should not switch from fixed foreign exchange rate system to floating exchange rate as speculation could say that the value of local currency will decrease so people will sell it causing value to decrease as it will have lower demand. The uncertainty about export and import prices may discourage MNCs.</i></p> <p>Principal Examiner comment: Strong on one side and reasonable on the other.</p>
