Paper 2 Structured Questions

October/November 2021

MARK SCHEME

Maximum Mark: 90

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for teachers.

Cambridge international will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2021 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

This document consists of **24** printed pages.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

**Social Science-Specific Marking Principles
(for point-based marking)****1 Components using point-based marking:**

- Point marking is often used to reward knowledge, understanding and application of skills. We give credit where the candidate's answer shows relevant knowledge, understanding and application of skills in answering the question. We do not give credit where the answer shows confusion.

From this it follows that we:

- a** DO credit answers which are worded differently from the mark scheme if they clearly convey the same meaning (unless the mark scheme requires a specific term)
- b** DO credit alternative answers/examples which are not written in the mark scheme if they are correct
- c** DO credit answers where candidates give more than one correct answer in one prompt/numbered/scaffolded space where extended writing is required rather than list-type answers. For example, questions that require *n* reasons (e.g. State two reasons ...).
- d** DO NOT credit answers simply for using a 'key term' unless that is all that is required. (Check for evidence it is understood and not used wrongly.)
- e** DO NOT credit answers which are obviously self-contradicting or trying to cover all possibilities
- f** DO NOT give further credit for what is effectively repetition of a correct point already credited unless the language itself is being tested. This applies equally to 'mirror statements' (i.e. polluted/not polluted).
- g** DO NOT require spellings to be correct, unless this is part of the test. However spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. Corrasion/Corrosion)

2 Presentation of mark scheme:

- Slashes (/) or the word 'or' separate alternative ways of making the same point.
- Semi colons (;) bullet points (•) or figures in brackets (1) separate different points.
- Content in the answer column in brackets is for examiner information/context to clarify the marking but is not required to earn the mark (except Accounting syllabuses where they indicate negative numbers).

3 Calculation questions:

- The mark scheme will show the steps in the most likely correct method(s), the mark for each step, the correct answer(s) and the mark for each answer
- If working/explanation is considered essential for full credit, this will be indicated in the question paper and in the mark scheme. In all other instances, the correct answer to a calculation should be given full credit, even if no supporting working is shown.
- Where the candidate uses a valid method which is not covered by the mark scheme, award equivalent marks for reaching equivalent stages.
- Where an answer makes use of a candidate's own incorrect figure from previous working, the 'own figure rule' applies: full marks will be given if a correct and complete method is used. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

4 Annotation:

- For point marking, ticks can be used to indicate correct answers and crosses can be used to indicate wrong answers. There is no direct relationship between ticks and marks. Ticks have no defined meaning for levels of response marking.
- For levels of response marking, the level awarded should be annotated on the script.
- Other annotations will be used by examiners as agreed during standardisation, and the meaning will be understood by all examiners who marked that paper.

Examiner annotations

| Question | Answer | Marks | Guidance |
|----------|---|----------|--|
| 1(a) | Calculate, in \$, Air India's loss in 2018. 0.7bn, 700m, 700 000 000. | 1 | 7 × 10 to the power 8. 7 × 10 ⁸ . |
| 1(b) | Identify <u>two</u> substitutes for air travel. Trains (1) ships (1). | 2 | For 'ships' accept water travel. |
| 1(c) | Explain <u>one</u> characteristic that suggests that Air India was a monopoly in 1994. Share of the market was 100% (1) only firm / share above 25% of the market / share above 40% / a complete/pure monopoly / no competition (1). Able to set price (1) a price-maker (1). | 2 | |
| 1(d) | Explain <u>two</u> reasons why a government may privatise an industry. Logical explanation which might include: Raise (tax) revenue (1) which could be spent on e.g. education, healthcare / increase government spending (1). Increase efficiency / may perform better in the private sector / higher productivity (1) introduce a profit motive / increase output/GDP / reduce costs of production (1). Increase competition (1) lower price / increase quality / increase choice (1). Industry may be loss making / costly to run (1) reduce need to use tax revenue to finance industry / tax revenue can be used for other purposes e.g. education / increase government spending / reduce national debt / tax rates might be cut (1). | 4 | One mark each for each of two reasons identified and one mark each for each of two explanations. |

| Question | Answer | Marks | Guidance |
|----------|---|-------|--|
| 1(e) | <p>Analyse how India's position on the current account of its balance of payments in 2017 compares with the other four countries.</p> <p>Coherent analysis which might include: Brazil, India and Kenya had a current account deficit (1) while China and Russia had a current account surplus (1). India's current account deficit is the largest in terms of \$s (1) but the second largest in % terms (1). China's current account had a larger impact on its economy in terms of \$s (1) and Kenya's in percentage terms (1). Russia's current account surplus is larger than China's in terms of % of GDP (1). China has the largest surplus in \$s (1).</p> | 4 | <p>Up to 2 marks maximum for idea of size of current account balance without reference to deficit or surplus e.g. China has the largest current account balance and India the lowest. So maximum of 2 marks without reference to deficit/s or surplus/es.</p> <p>No marks for writing about a budget balance.</p> |
| 1(f) | <p>Analyse how a successful airline industry can promote economic growth.</p> <p>Coherent analysis which might include; May increase number of tourists (1) raise revenue from tourism / increase the size of the tourist industry (1) may increase exports / imports / increase the ease of movement of people and goods into and out of the country (1). May attract more MNCs (1) these will increase the country's output/GDP (1) introduce new technology / new methods of production (1). May lower costs of production (1) raising firms' profits (1) providing the incentive/finance to expand (1) increase the country's output/GDP (1). May increase employment (1) raise incomes (1) increase total demand (1) increase tax revenue (1) more could be spent on e.g. education (1). May increase (geographical) mobility of labour (1) making it easier for expanding firms to recruit workers (1).</p> | 5 | |

| 4(b) | <p>Explain <u>two</u> reasons why households may save less even though their income has increased.</p> <p>Logical explanation which might include: Fall in the rate of interest (1) which would reduce the return from saving / spend/borrow rather than save (1). Inflation (1) spend more now before prices rise further / may reduce the real rate of interest (1). Increase in confidence about the future (1) less motive to save for hard times / less concerned will experience unemployment or fall in income (1). Fall in range, number or reliability of financial institutions (1) which would reduce the safe places to save (1). Greater consumption opportunities / spend more / higher living standards (1) with the introduction of new products / lower prices / may be able to afford private education / healthcare (1). Increase in taxes (1) reducing disposable income (1). Rise in family size (1) increasing household expenses (1). Rise in debt (1) may reduce ability of households to e.g. to put money into a savings account (1). Change in social attitudes (1) due to e.g. change in age of households (1).</p> | 4 | One mark each for each of two reasons identified and one mark each for each of two explanations. |

| 4(c) | <p>Analyse how a trade union may benefit its members.</p> <p>Coherent analysis which might include: A trade union may negotiate with employers (1) to raise wages (1) improve working conditions (1) example (1) increase fringe benefits (1) example (1) through collective bargaining (1) and sometimes industrial action / strikes (1). A trade union may settle disputes between the employer and the workers (1) e.g. over changes in working practices (1) protect workers' rights (1). A trade union may seek to protect the employment of its members (1) in some cases negotiate favourable redundancy terms (1). A trade union may negotiate / put pressure on the government (1) to e.g. raise a national minimum wage or reduce the retirement age (1). In some countries, trade unions provide benefits and services to members (1) e.g. training services (1).</p> | 6 | |

| 4(d) | <p>Discuss whether or not a fall in its foreign exchange rate will improve a country’s macroeconomic performance.</p> <p>In assessing each answer, use the table opposite.</p> <p>Why it might:</p> <ul style="list-style-type: none"> • export prices will fall and import prices will rise • demand for exports may rise and demand for imports may fall • domestic output will increase, economic growth may rise • more workers may be employed, reducing unemployment • a deficit on the current account of the balance of payments may be reduced or a surplus increased • may encourage foreign investment if it is thought assets can be bought more cheaply. <p>Why it might not:</p> <ul style="list-style-type: none"> • rise in price of imported capital goods and raw materials may increase costs of production, causing cost-push inflation • higher total (aggregate) demand may cause demand-pull inflation, especially if the economy is working close to full capacity • demand for exports and imports may be price inelastic, causing export revenue to fall and import expenditure to rise – in such a case may benefit more from a rise in the exchange rate • trade restrictions imposed by other countries may prevent the country from exporting more products • may discourage foreign investment due to a lack of confidence in the country’s future economic prospects. | 8 | <table border="1"> <thead> <tr> <th data-bbox="1283 209 1391 277">Level</th> <th data-bbox="1391 209 1944 277">Description</th> <th data-bbox="1944 209 2056 277">Marks</th> </tr> </thead> <tbody> <tr> <td data-bbox="1283 277 1391 852">3</td> <td data-bbox="1391 277 1944 852">A reasoned discussion which accurately examines both sides of the economic argument, making use of economic information and clear and logical analysis to evaluate economic issues and situations.
