UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

International General Certificate of Secondary Education

MARK SCHEME for the May/June 2006 question paper

0680 ENVIRONMENTAL MANAGEMENT

0680/02

Paper 2, maximum raw mark 80

Www.strapapers.com

These mark schemes are published as an aid to teachers and students, to indicate the requirements of the examination. They show the basis on which Examiners were initially instructed to award marks. They do not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published *Report on the Examination*.

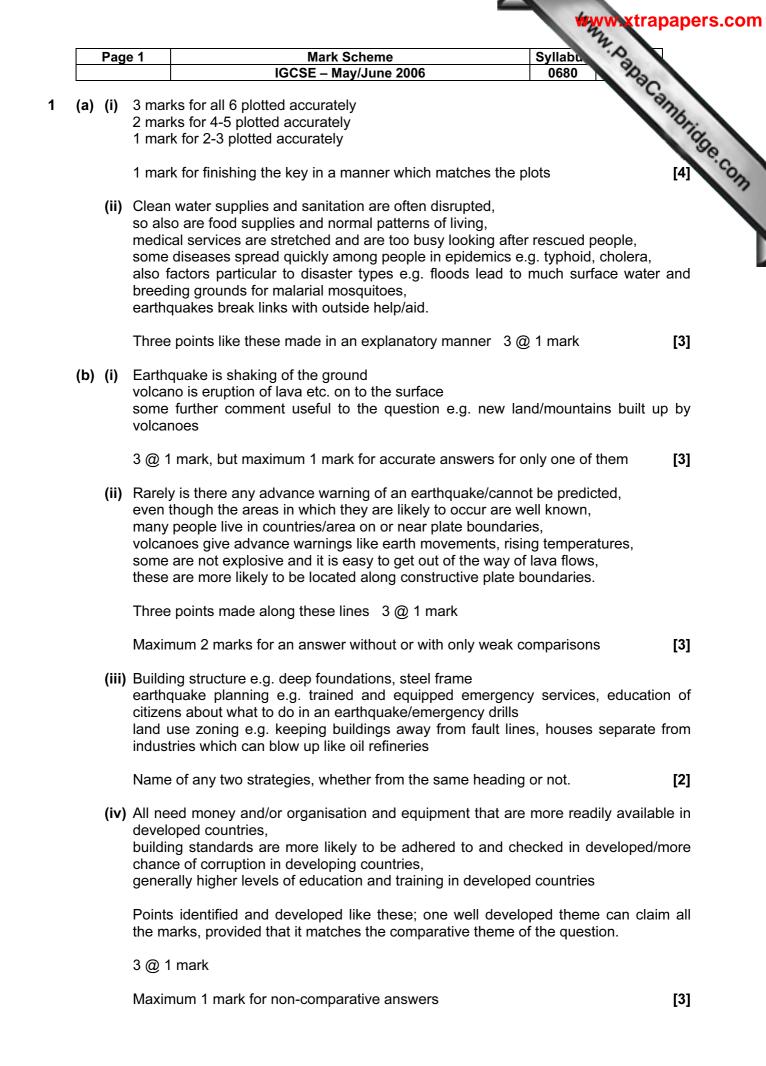

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the *Report on the Examination*.

The minimum marks in these components needed for various grades were previously published with these mark schemes, but are now instead included in the Report on the Examination for this session.

• CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2006 question papers for most IGCSE and GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

		IGCSE – May/June 2006 0680	"ac				
)	(i)	In the tropics over the sea/Atlantic Ocean (or similar)	ant				
	(ii)	Sea water temperatures are at their highest at end of summer,					
		ge 2 Mark Scheme Syllabu IGCSE – May/June 2006 0680 In the tropics over the sea/Atlantic Ocean (or similar) Sea water temperatures are at their highest at end of summer, above 25 °C, hot surface heats air and encourages it to rise through the atmosphere, rising air holds a great deal of moisture, this cools and condenses to form giant cumulo-nimbus/thunder clouds					
		rising air holds a great deal of moisture,					
		this cools and condenses to form giant cumulo-nimbus/thunder clouds, deep area of low pressure forms,					
		steep pressure gradient around it causes very strong winds					
		Points made along these lines 3 @ 1 mark	[3]				
	(iii)	Westwards and northwards/north-west	[1]				
	(iv)	Numbers noted on the correct islands	[1]				
	(v)	Deaths reduce the further/further north Hurricane Ivan travels (or simila	ır) [1]				
d)	(i)						
		hurricane shelters = the 4 actions to be placed around the branches diagram	s of the spidei [1]				
	(ii)	Best choice - evacuation of people = 1 mark for choice					
	(11)	 Best choice – evacuation of people = 1 mark for choice. Reason – people taken out of the way of the storm to areas where it will be less strong = second mark. 					
		Second best choice – move to shelters = no mark for choice, but up well stated reasons and showing knowledge/understanding of what c hurricane shelters.					
		Other two choices – likely 1 mark answers for explanation about how t the quality of the explanation would need to be exceptional for the sec given.	•				
		Grenada was the first place where Hurricane Ivan hit land, its track through the Caribbean was well known by the time it reached 0 by Cuba weather forecasters were able to predict more accurately, map shows that Cuba is a larger island than Grenada, there were places on Cuba to which people could be evacuated, whereas the whole island/90% of homes were devastated in Grenada.	Cuba,				
		Points such as these made in an explanatory manner 3 @ 1 mark	[3]				
	(iv)	From the report, 'no water, electricity, food' = the 1 mark answer, about the consequences from their lack = 1 or 2 marks.	[2]				
	(v)	The general answer is emergency aid, which may be illustrated by needed in relation to shortages noted in the previous answer = 1 mark					
		However, given the scale of the devastation, only aid from outside from and/or aid organisation and charities = converted into a 2 mark answer.

will tal new b	ng crops station was total 'wasteland of …damaged vegetation', ke time to clear land, re-work the soil, buy seeds and re ush and tree crops would take several years to produc 2 marks	

(vi) Farming crops

Tourism

ruined properties could be hotels, holiday homes/mountains no longer beautiful with vegetation,

reasons for tourists going there have disappeared/island has lost its attractions, stories of fear when the hurricane was blowing will not encourage others to go/reputation of the island has suffered badly.

Up to 2 marks

Overall comment/possibilities

It looks bad for Grenada for several years unless a massive amount of development aid from outside agencies manages to replace quickly the lost infrastructure.

Up to 2 marks

Summary of marking

- 1-2 marks Brief references to one or both income sources, but dependent on the source; any comment is general in nature and lacking support
- 3-4 marks Stronger content; perhaps without balance between the sources or a strong enough overall comment
- 5 marks Balanced coverage of the question, supported by meaningful comment about prospects and possibilities [5]

[Question total: 40 marks]

rapapers.com

- 2 (a) (i) No risk in developed countries.
 - (ii) More high risk countries in Africa than elsewhere, some high risk in South Asia/central parts of South America / named countries, low risk dominates in Central and South America, also in North Africa/interior Asia, medium risk mainly restricted to smaller areas/individual countries, either in Asia or sub-Saharan Africa.

Description made along these lines

Reserve 1 mark for reference to developed countries; otherwise 3 @ 1 [4]

(b) (i) Algeria, Egypt and Sudan from North Africa; any country which practises agriculture in the Middle East; Pakistan, India and Sri Lanka in South Asia; Spain, Greece and Cyprus from within Europe; from rest of world USA, Australia, China and Peru i.e. a named country or region with a dry climate known to use irrigation water. [1]

	e 4 Mark Scheme Syllabu IGCSE – May/June 2006 0680 Use of irrigation water in dry climates, over-use of irrigation water/not well targeted as in trickle irrigation, high temperatures evaporate water leaving residue of salts, salts drawn up from lower levels in soil to the surface by high rates of evaporation. General points like this or more scientific statements like residual sodium ions left as dominant in the soil solution after calcium and magnesium are precipitated as				
	General points like this or more scientific statements like residual sodium ions left as dominant in the soil solution after calcium and magnesium are precipitated as carbonates by evapotranspiration.				
		num 2 marks without something that ties the commers without an acceptable named area	ent to the named area or for [3]		
(iii)	Shorta	age of farmland.			
	For ar	ny other answer, the context would need to be made	e clear. [1]		
. ,	These often result from major climatic events/they are natural hazards, such as tropical storms/years without any rain falling, they can be much greater than average so that they are on too large a scale/too widespread for people to prevent.				
	Two c	omments made along these lines 2@1 mark	[2]		
(v)	Stater	nents which lead to two of the following relevant and	swers		
	over-c monoc use of other o	razing, sultivation, culture, ⁵ heavy machinery, examples of bad farming practices different from the ng more trees (remember the context of 'farmers' ca			
	2 @ 1	mark	[2]		
(vi)	CC	teep hillsides ontour ploughing and terraces are the most obvious oth reduce the movement of soil down slope during			
	W	at lowland areas with low rainfall ind breaks, dry land farming (including crop rotation p soil is less exposed to wind during dry weather –			
	Some will try to use other strategies, notably tree planting, which is not a good answer for either part because of the question focus on crop growing areas. It is unlikely to lead to acceptable answers unless it is stated in the context of planting crops between/under bushes and trees (which some candidates might call agro- forestry) or in the context of windbreaks.				

Typically 2 + 2 marks, but if merited allow 3 + 1 marks

Pag	e 5	Mark Scheme	Syllabu			
		IGCSE – May/June 2006	0680			
) (i)	Mark Scheme Syllabu IGCSE – May/June 2006 0680 Poverty will arise from unemployment/lack of economic growth in the flow gramigration of poor people from rural areas leads to cities full of poor people, if they do not have work they cannot afford housing so have to look after themselver city authorities do not have the money to build houses that the poor can afford. 1 mark for establishing a link between poverty and what is stated in the diagram 1 mark for linking two points in the flow diagram in an explanation					
	Third	mark for fuller explanation by linking diagram info	ormation in a causal manner			
(ii)	ii) Possible labels on sketch					
	sides/ but al cloth small house	neet roofs, /fronts of wood, so mixed materials like cardboard and cloth, cover extends on to street, windows/windows without glass, es closely packed together, ne at the front but less organised plan elsewhere.				
	4 @ 1 for labels to the relevant feature					
	lf all n	marks not claimed, credit 1 mark for a good quality	y sketch			
(iii)	iii) Possible strategies for improving shanty town environments					
	w A	mproving the environment by laying on public vater and sanitation; paved road access to th outhorities/ Governments/Housing Associations/N naking them official residential areas.	ne rest of the city – by C			

- Community participation including the above, but also provision of building materials to allow shared work on building 'proper' houses.
- Planning new areas of affordable housing, sometimes new towns (e.g. Cairo) often housing in a pre-planned area.

Maximum 3 marks for an answer without content that can be clearly linked to a named example

Mark on basis of amount of relevant information provided

(d) (i) Land under cultivation, number of crops grown per year and agricultural production all increased.

Any two of these

 (ii) Land under cultivation – 50 hectares, number of crops grown – increase of 1, 2 or 3, agricultural production – yield per hectare up by 3100.

2 @ 1 mark for choices used in part (i)

	IGCSE – May/June 2006	00	680 20	
There	supply/water availability increased to all the year fore could grow crops all year/2-3 crops per year i ed increase in the area of land cultivated, y increased output per hectare.		0-1,	bridge.con
One c	of these for the second mark		ſ	[2]

(iv) The main reason would seem to be the great increase in household incomes, some comment about the significance of this, using values such as migration rate down by 73% or period of migration reduced by 8 months

Up to 2 marks for this

Evidence that quality of life has improved, with all year supplies of drinking water/more food to eat, values to support these, other likely benefits e.g. less disease/less infant mortality

Up to 2 marks for these

Maximum 3 marks without answers that include at least one difference in value used as part of a point worthy of credit [3]

- (v) All the evidence points to the answer 'yes', that it is a good strategy; this is easier to justify with arguments such as
 - people are happy to stay in rural areas if income levels and services are as good ٠ as in the cities; there is less to push them out of rural areas.
 - many problems in urban areas are caused by the continuous flow of poor people out of the rural areas (see earlier in the question); cities will be given a breathing space to improve housing and services.
 - in other words, it can be better to stop a problem from arising than trying to solve • a problem that is already big.

An answer 'no' is more difficult to justify and it will be less easy to claim all the marks. One line of argument could be the strength of pull factors in urban areas irrespective of what happens in the countryside. Also it does not bury the need to solve the urban problems that still exist, which need their own solutions.

1 mark for answers which include something worthwhile without meeting all the auestion needs

2 marks for understanding question need and giving a little supporting comment

3 marks for good understanding generating an answer well focused on question need [3]
