Candidates answer on the Question Paper

Additional Materials: Ruler

## **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen. You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid. DO **NOT** WRITE IN ANY BARCODES.

Answer **all** questions.

Study the appropriate Source materials before you start to write your answers.

Credit will be given for appropriate selection and use of data in your answers and for relevant interpretation of these data. Suggestions for data sources are given in some questions.

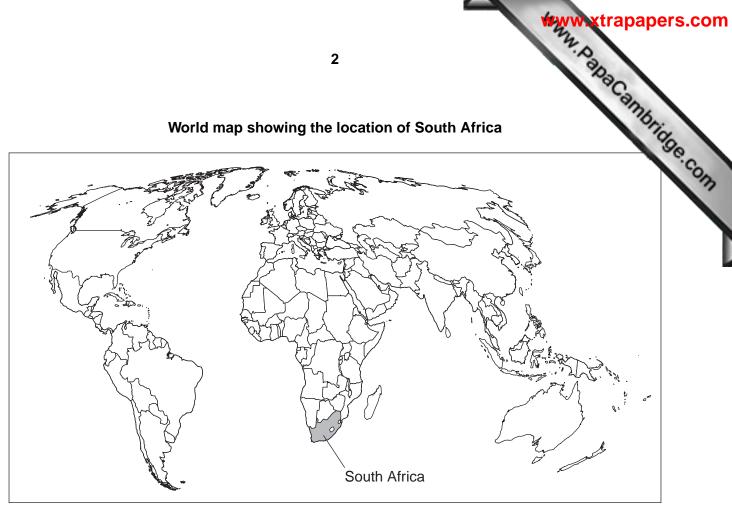

You may use the source data to draw diagrams and graphs or to do calculations to illustrate your answers.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [] at the end of each question or part question.

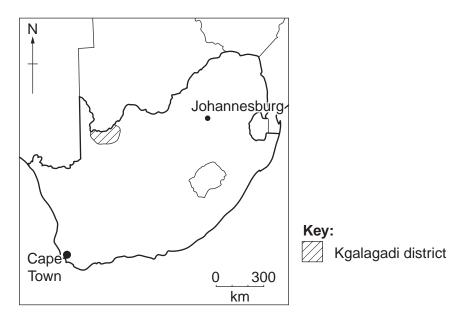

F	For Examiner's Use

This document consists of **15** printed pages and **1** blank page.

Map of South Africa

2

Www.xtrapapers.com Area of South Africa: 1219912 sg km Population: 50000000 Children per woman: 2.43 Life expectancy at birth: 48 years Currency: rand (8 rand = 1 US dollar) Languages: Isizulu, Isixhosa, Afrikaans, Sepedi, English, others Climate: mostly semi-arid; subtropical along the east coast; sunny days, cool nights on the plateau Terrain: vast interior plateau surrounded by hills, narrow coastal plains Main exports: gold, diamonds, platinum, other metals, machinery

South Africa is rich in natural resources with well developed financial, legal, communications, energy and transport sectors. A good infrastructure supports the efficient distribution of goods to urban centres. However there is still high unemployment and poverty. Recently immigration of mostly unskilled labour has placed heavy demands on the social welfare system. Agricultural products that are not exported include rice, beans, potatoes, beef and timber. Industry includes food processing, construction materials, fertilisers and plastic products.

3

Www.papacambridge.com (a) In Kgalagadi district up to fifty percent of the people are unemployed. The district 1 semi-arid but has one reliable water supply, the Kuruman Eye. This delivers 20 m litres every day and the water is piped for many kilometres to irrigate crops and supp homes.

Some unemployed people in a small village wanted to start a project breeding chickens for their food and to sell in the local market. They asked an animal scientist to help them make a plan they could carry out themselves.

Suggest why the people wanted to carry out the plan themselves. (i)

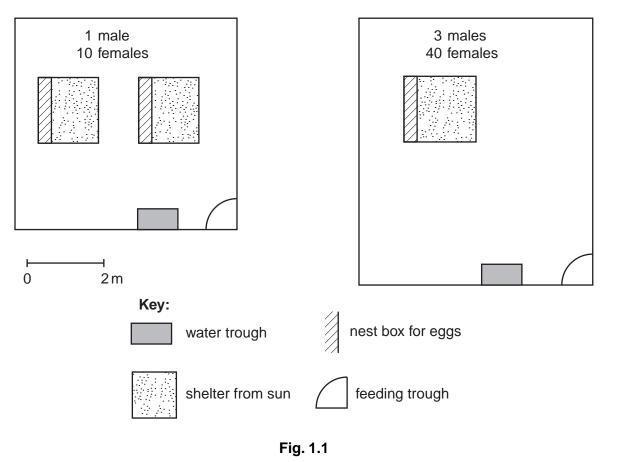

.....[2]

(ii) The animal scientist said there were two chicken breeds often kept on farms in South Africa, the Ovambo and the Koekoek. A small scale trial was carried out on both breeds.

## Trial chicken enclosures

Ovambo enclosure

Koekoek enclosure

4

5
Suggest three ways the trial shown in Fig. 1.1 could be improved to mak
comparison of the two breeds.
[3]
(iii) Why did the people want to leave a gap between the two enclosures?
[1]

(iv) After one year they had a record of both enclosures as shown in Table 1.1.

## Table 1.1

	Ovambo	Koekoek
number of eggs per chicken	130	198
average weight of chicken after sixteen weeks (kg)	2.25	2.62
average live weight of chicken eaten in the village (kg)	2.55	2.97
average live weight of chicken sold at market (kg)	2.95	3.20

Calculate the average growth rate of each breed in the first sixteen weeks.

Ovambo ......[2]

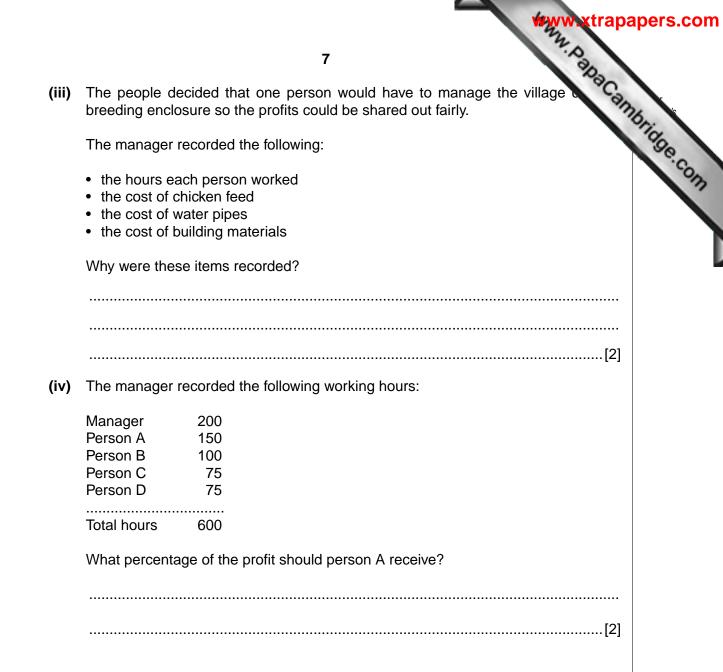

(v) Give three reasons why the people decided to farm the Koekoek breed, rather than the Ovambo breed, the following year.

[3]

[4]

(ii) The Koekoek breed produces meat with a low fat content. Suggest why the people's health improved when they could eat eggs as well as chicken meat.

 	[1]

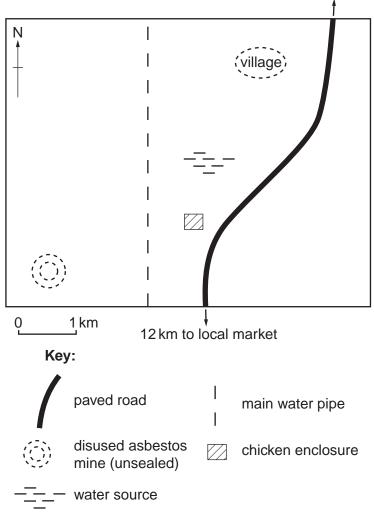

Www.PapaCambridge.com 8 (c) The manager thought that the larger enclosure would create a larger quantity of The manager decided to build a small manure digester to release enough methane to cook all the workers' meals. to cooking stove chicken manure methane gas soil manure digester Fig. 1.2 Suggest why the digester is mainly underground. (i) .....[1] Give two advantages of using the methane burning stove. (ii) ..... .....[2] Developing a large chicken enclosure and building a digester needs an investment (iii) of 4000 rand (500 USD). Suggest a possible source of money for this development. .....[1] Explain why the chicken enclosure and the manure digester are good examples of (iv) sustainable development. .....[2]

Many people in the district grow vegetables for sale in the towns. Each year about 20 2 seedlings are planted.

Some women in the village decided to set up a plant nursery after they noticed that plan seedlings sold very quickly in local markets.

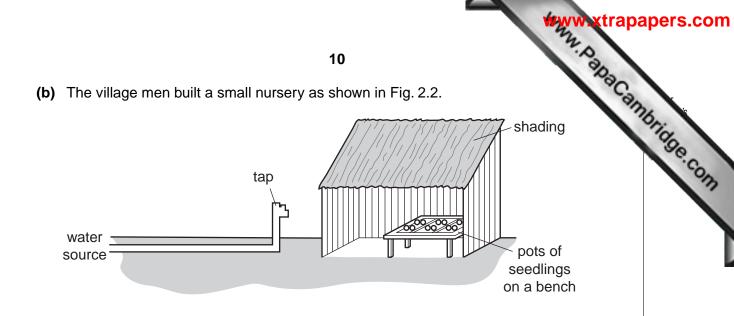

Www.papacambridge.com When setting up the nursery they needed to take water from the local water source and build a simple gravel track. The available land contained a disused asbestos mine.

8 km to local market

(a) Draw an X on the plan to show where you would locate the nursery. Give three reasons for your chosen location. first reason ..... ..... second reason ..... ..... third reason ..... .....[4]

Some temperature and humidity readings were taken from different places inside the nursery. The readings were taken at the edge and the centre of the shading.

	edge of	shading	centre of shading				
time of day	temp °C	relative humidity %	temp °C	relative humidity %			
08:00	20	60	24	73			
12:00	33	31	30	48			
16:00	27	45	32	52			

Table 2.1

(i) How should the temperature and humidity be measured accurately?

(ii) Explain, using information from Table 2.1, why the women were able to grow seedlings very successfully.

	<b>T</b> 1.	
)		11 e women quickly made 800 rand profit selling 500 seedlings. w much profit was made on each seedling? [1] e women wanted to invest the profit in different ways:
)	The	e women wanted to invest the profit in different ways:
	Α	First woman
		we should start by making more pots and extra seed benches
	_	
	В	Second woman
		we should start by making the shaded area bigger
	с	Third woman
		we should buy a donkey and cart first so we do not need to carry seedlings to market
		e women need to decide which of these investments to make first.
	Usi	
	Usi	e women need to decide which of these investments to make first. Ing the letters <b>A</b> , <b>B</b> and <b>C</b> write down the order you would choose starting with ar first investment.

(a) Many of the men travel south from their villages to work in the gold mines. They 3 several months and then return to their village.

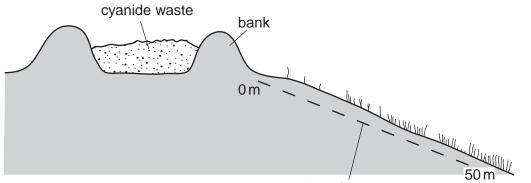

Look at Fig. 3.1.

Www.papaCambridge.com (c) Many mine spoil heaps still contain small quantities of gold. When gold has a high price the spoil is crushed and poisonous cyanide added. A chemical reaction exit some extra gold from the spoil. Mining companies claim this process does not harm the environment.

Some students carried out a survey as shown in Fig. 3.2.

line of survey

	distance from bank (m)									
	0	10	20	30	40	50				
number of plant species	2	3	4	6	9	9				
number of plants in 1 m <sup>2</sup>	10	13	17	21	36	34				

To prevent livestock being poisoned the mining company agreed to build a fence around the cyanide waste.

(i) How many metres from the cyanide waste should the fence be built? Give reasons for your answer.

distance (m) ..... reasons ..... [3] (ii) Suggest two ways in which the students could have improved their survey. ..... ..... .....[2]
