Alternative to Coursework

May/June 2013

1 hour 30 minutes

Candidates answer on the Question Paper.

Additional Materials:

Ruler

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

Electronic calculators may be used.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Study the appropriate Source materials before you start to write your answers.

Credit will be given for appropriate selection and use of data in your answers and for relevant interpretation of these data. Suggestions for data sources are given in some questions.

You may use the source data to draw diagrams and graphs or to do calculations to illustrate your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use

Area of Argentina: 2800000sqkm

Population: 43 million Children per woman: 2.3 Life expectancy: 77 years

Currency: Argentine pesos (4.0 = 1US\$)

Language: Spanish

Climate: temperate, becomes drier towards the northwest and south east

Terrain: vast grassy plains of the Pampas in the northern half, dry plateau of Patagonia in the south,

Andes Mountains in the west

Main exports: soybeans, maize, wheat, beef, manufactured goods and fuels (mainly gas).

Argentina is a country rich in natural resources, with a long history of exporting the agricultural products of the Pampas and a wide industrial base. Approximately 14 million people live in the capital city, Buenos Aires. Argentina has suffered from several economic crises in the last hundred years but the economy has performed well since the world recession of 2009. The rate of inflation remains high.

(c)	soyl with	5 st of the soybean grown in Argentina is GM (genetically modified). The second have been genetically modified so a weedkiller 'round up' can be spread to the damaging the soybean crop. The weedkiller allows large areas of land to be sted with one crop (monoculture). Explain one advantage to the farmer of using GM soybeans.	bridge
	(i)	Explain one advantage to the farmer of using GM soybeans.	COM
		[1]	
	(ii)	Suggest two possible problems of having large areas of monoculture.	
		[2]	
	(iii)	Some people think growing GM crops is a risk to the environment. Why do they think this?	

[Turn over © UCLES 2013

(d) The photograph shows part of a soybean plant.

Soybean plants grow rapidly. A scientist planted soybean seeds in two separate containers using soil that had never been used to grow soybeans. One container had urea added, a fertiliser releasing nitrogen. He took sample plants from each container every 15 days. He found the dry mass of each sample. The results are shown below.

	Dry mass of soybean growth $/ g m^{-2}$			
days from planting	soil without added urea	soil with added urea		
15	1.0	1.0		
30	2.0	2.0		
45	4.2	4.4		
60	10.8	10.6		
75	12.5	12.4		

(i)	State two factors that the scientist needed to keep the same for both containers.
	[2]

(ii) Plot a graph of the data in the table on page 6.

4]	

(iii)	Did the fertiliser make a difference to the growth of soybeans in the two soils? Using information from the graph and table explain your answer.
	[2]

[Turn over © UCLES 2013

(e) The scientist then went to three fields where soybeans were going to be plant measured the concentration in the soil of a different nutrient, phosphate. He repet the measurements after the first harvest in each field. The results are shown below.

field	phosphate concentration before planting / ppm	phosphate concentration after first harvest / ppm
1	1.0	0.8
2	0.9	0.7
3	0.9	0.7

(i)	Suggest an explanation for what happened to the phosphate concentration during the growing season.
	[1]

TURN OVER FOR QUESTION 1(e)(ii)

© UCLES 2013 [Turn over

mainta eans. And environmentareas that had m as shown in (ii) Farmers often grow soybeans year after year due to high demand. To mainta crop yields fertilisers are added after the first year of planting soybeans. And scientist was worried that repeated additions of fertiliser could cause environment damage to streams and rivers. The scientist looked at a map of areas that had been planted with soybeans for several years and the drainage system as shown in the diagram below.

Look at the map.

WWW. Papa Cambridge. Com She studied the map to look at the drainage system. She tried to predict while stream, A, B, C or D, would have the highest and lowest phosphate concentration where soybeans had been planted and fields fertilised. Suggest what she would have predicted.

	stream with highest phosphate concentration	
	stream with lowest phosphate concentration	[1]
(iii)	Describe the changes to life in the streams that can be caused by high phospha concentrations.	ate
		· • • • •
		.[5]

(f) A farmer grew GM soybeans in the same field year after year, adding enough fertiliser to replace the nutrients used by the crop each year. The table shows part of the farm records for this field over a period of 6 years.

year	crop	yield / tonnes per hectare
1	soybean	3.8
2	soybean	3.5
3	soybean	3.3
4	soybean	3.3
5	soybean	2.8
6	soybean	2.5

(i) Calculate drop in yield between year one and year six as a percentage of the yield in year one.

Space for working.

 [1]
