Paper 2

May/June 2015

1 hour 45 minutes

Candidates answer on the Question Paper.

Additional Materials: Insert

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **both** questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

The Insert is **not** required by the Examiner.

This document consists of **15** printed pages, **1** blank page and **1** Insert.

4

- (c) Two rivers flow into the Aral Sea. Both have been dammed and the water is mainly used to irrigate crops of cotton, rice and wheat. The percentage of the water taken from the rivers from 1960 to 2000 is shown in the table.

year	percentage of water taken
1960	45
1980	95
2000	90

- (i) Complete a bar graph on the grid below to show the data in the table. Label the axes.

[4]

- (ii) In the year 2000, the total amount of water flowing down the two rivers was 120 km^3 . Calculate how much of this water reached the Aral Sea.

..... km^3 [1]

(e) Look at Photograph A (Insert) of soil erosion on a hillside.

(i) Most of the natural vegetation has been cleared for grazing. What was the natural vegetation?

.....[1]

(ii) Describe what has happened to the hillside shown in the photograph since the natural vegetation was cleared.

.....
.....
.....
.....[2]

(iii) Explain **two** ways in which farmers can reduce soil erosion.

.....
.....
.....
.....
.....
.....
.....
.....
.....
.....[4]

(iv) Explain why soil erosion is a serious problem.

.....
.....
.....
.....
.....
.....
.....[3]

2 (a) Read the four definitions of ecosystem terms.

- W** A community of organisms, where each is eaten in turn by another.
- X** Organism that forms the base of a food chain by taking energy from the environment to create carbohydrates.
- Y** The place where a population (e.g. human, animal, plant, microorganism) lives and its surroundings, both living and non-living.
- Z** Total number of individual organisms of the same species living within a defined area.

Match the following terms to their definitions, labelled **W, X, Y, Z**:

term	letter
food chain
habitat
population
producer

[3]

(b) The graph shows climate data for a savanna region in southern Africa.

(i) Use the figures in the table to complete the climate graph.

month	Sep	Oct	Nov	Dec
average temperature / °C	23	27	26	24

[2]

(ii) Calculate the range of temperature.

.....°C [1]

(iii) Calculate how much rain falls in the driest three months.

.....mm [1]

(iv) State the season when the rainfall is lowest.

.....[1]

(d) In some parts of Africa, elephants cause problems for farmers and villagers. They eat the crops and animal fodder and destroy fences used to keep animals secure. Their numbers have grown in recent years as they are protected and trade in ivory (from their tusks) has been banned for many years. Some villagers think that the number of elephants need to be reduced.

Explain why the WWF (World Wide Fund for Nature) would oppose reducing the number of elephants.

.....

.....

.....

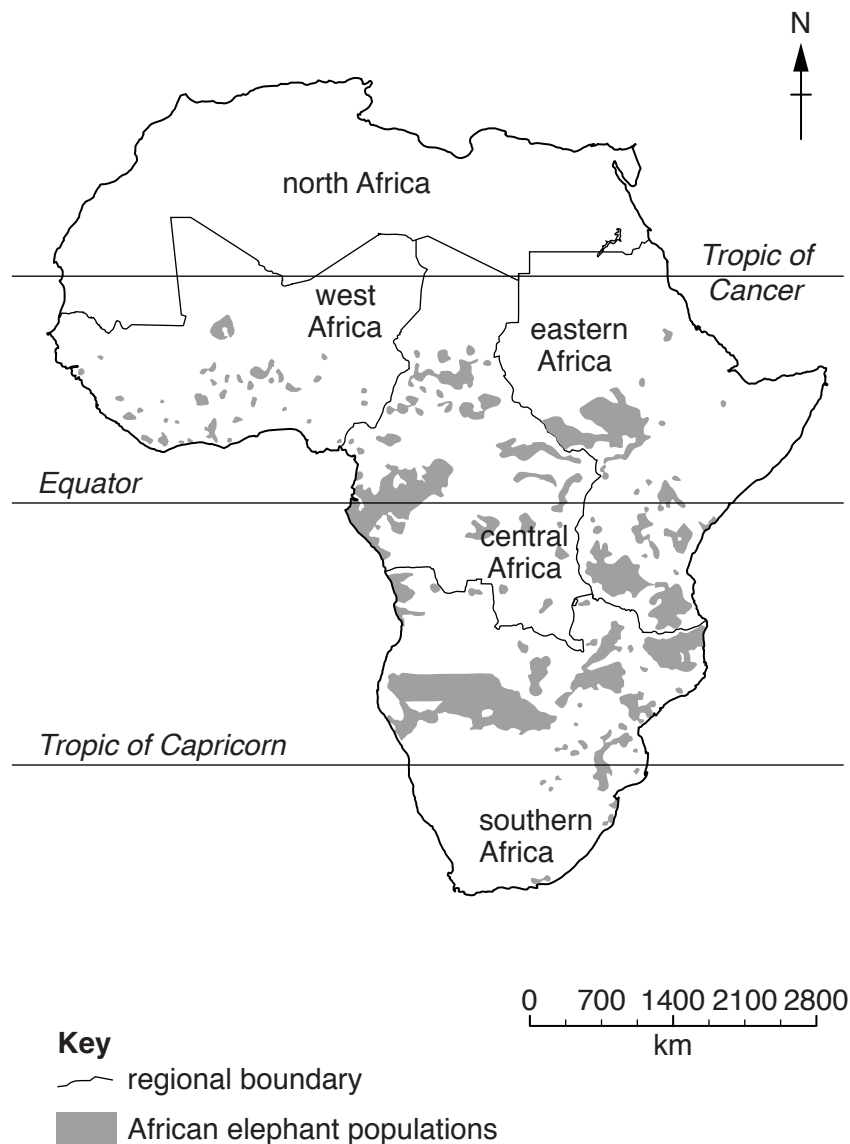

.....[2]

(e) Read the fact sheet about African elephant populations.

African elephants used to live in most of Africa. It is thought there may have been as many as 3-5 million African elephants 80 years ago. Elephants were hunted for trophies and their tusks. In the 1980s, an estimated 100 000 elephants were killed each year and up to 80% of herds were lost in some regions. In Kenya, the population fell by 85% between 1973 and 1989. Hunting is now banned in most African countries, but elephants are still being killed illegally for their tusks for ivory. Today, there are fewer than 700 000 left.

The map shows where African elephants are found today. In general, the elephant population is only increasing in the southern parts of Africa.

(i) How many African elephants are thought to be alive today?

.....[1]

(ii) Describe the distribution of the elephant population in Africa.

.....
.....
.....
.....
.....
.....[3]

(iii) Suggest why elephant numbers are increasing in southern parts of Africa, but decreasing in other parts of Africa.

.....
.....
.....
.....
.....
.....[3]

(f) Look at the graph which shows world human population by world region from 1950 to 2050.

(i) State the world population in billions in 1950.

..... billion [1]

(ii) State the predicted world population in billions in 2050.

..... billion [1]

(iii) Identify the world region which has had the largest population since 1950.

.....[1]

(iv) Estimate how many years it took for the world population to increase from three billion to four billion.

..... years [1]

(v) Explain the rapid increase in world population since 1950.

.....
.....
.....
.....
.....
.....
.....[3]

(vi) Explain environmental problems that are caused by an increasing human population.

.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....[6]
