UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education

## WANN, PapaCambridge.com MARK SCHEME for the October/November 2011 question paper

## for the guidance of teachers

## **0648 FOOD AND NUTRITION**

0648/01

Paper 1 (Theory), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

Cambridge will not enter into discussions or correspondence in connection with these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2011 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

## (b) Care and choice of saucepans

choice of saucepans must suit cooking stove – thick base for electric cooker – retain heat – well balanced – to prevent tipping over – insulated handles and knobs – to prevent burning – well-fitting lids – to prevent loss of heat and steam – base should cover hotplate – prevents waste of heat – more economical – non-stick coating – easier to clean – enamel outside – to match kitchen decor – buy the best that can afford – less need to replace frequently – copper bases – good conductor of heat – more efficient – glass – can see what is cooking – stainless steel – hard wearing / easier to clean – iron – cheaper – stains – aluminium – lightweight – dents when dropped – not balanced on stove – choose a variety of sizes – to suit uses / size of family –

|                        | IGCSE – October/November 2011                     | 0648   | No.             |
| (b) The ans            | wer may include the following knowledge and under | standing.  | Cannot.         |
| (i) <u>Nuti</u><br>HB\ | rients in red meat and their functions            | hormones –   | 1950            |

- HBV protein growth / repair / maintenance / energy / hormones –
  Fat saturated energy / protection / insulation –
  Vit. A / retinol prevents night blindness / mucous membranes / visual purple –
  Vit. D / cholecalciferol absorb calcium / bones and teeth / prevents rickets –
  Thiamin / Vit. B1 release of energy from carbohydrate / nerve function –
  Riboflavin / Vit. B2 release of oxygen from fat / protein –
  Iron haemoglobin / transport oxygen / prevents anaemia –
  Phosphorus bones and teeth / release of energy –
  Water body fluids / lubrication of joints / maintains body temperature –
- (ii) <u>Reasons for toughness</u>

long muscle fibres – thick muscle fibres – meat from an old animal – muscles which have had most movement – e.g. neck / leg – muscles well developed – contains a large amount of collagen / connective tissue – and gristle – incorrect cooking method used – e.g. dry method for tough cut – frozen meat not defrosted thoroughly before cooking –

<u>Methods of tenderising meat before cooking</u> mince – cut into small pieces – score – to shorten muscle fibres – beat – with hammer / rolling pin – to separate fibres – slice against grain – hang – marinade / soak – in wine / acid / lemon juice / vinegar – use of enzymes / papain (from papaya) / bromelin (from pineapple) / ficin (from figs) –

(iii) <u>Changes during moist method of cooking</u> collagen – insoluble – converted to gelatine – soluble – moisture penetrates between muscle fibres – e.g. stewing / braising – elastin softens slightly – protein coagulates – at 40 °C to 60 °C – meat becomes firmer – fibres fall apart – meat becomes tender – easier to chew – muscle fibres shrink – extractives squeezed out – fat melts – colour changes from red to brown –

|        | IGCSE – October/November 2011  | 0648           | 120                  |
| Band   | Descriptor   |                | annb.                |
| High   | - Can identify at least 4 nutrients in meat, some reasor   | ns for toughne | ss                   |
|        | and many changes during cooking  |                | (22–30 poin          |
|        | - Can describe changes logically   |                |                      |
|        | - Discusses points in detail   |                |                      |
|        | - Uses scientific terms correctly  |                |                      |
|        | - Understands the effect of moist heat on meat   |                |                      |
|        | - Onderstands the functions of nutrients mentioned   |                |                      |
|        | - Can give some explanations on tenderising  |                |                      |
|        | - Sound knowledge of the topic is apparent   |                |                      |
|        | - All areas of the guestion addressed  |                |                      |
|        | - Details given in all parts of the question   |                |                      |
| Middle | - Can identify 2 or 3 nutrients in meat, a few reasons for   | or toughness   | 6–10                 |
|        | and some changes during cooking  |                | (12–20 points)       |
|        | <ul> <li>Some of changes logically described</li> </ul>  |                |                      |
|        | - Knows some functions of nutrients  |                |                      |
|        | - Detail in some areas but not all   |                |                      |
|        | - Answers lack precision   |                |                      |
|        | - Not all terms used accurately  |                |                      |
|        | - Some scientific information given  | of dotail      |                      |
|        | - Not all parts of question addressed in same amount of  |                |                      |
|        | - Knows a few ways to tenderise meat   |                |                      |
