CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education

## MARK SCHEME for the October/November 2012 series

# **0648 FOOD AND NUTRITION**

0648/12

Paper 1 (Theory), maximum raw mark 100

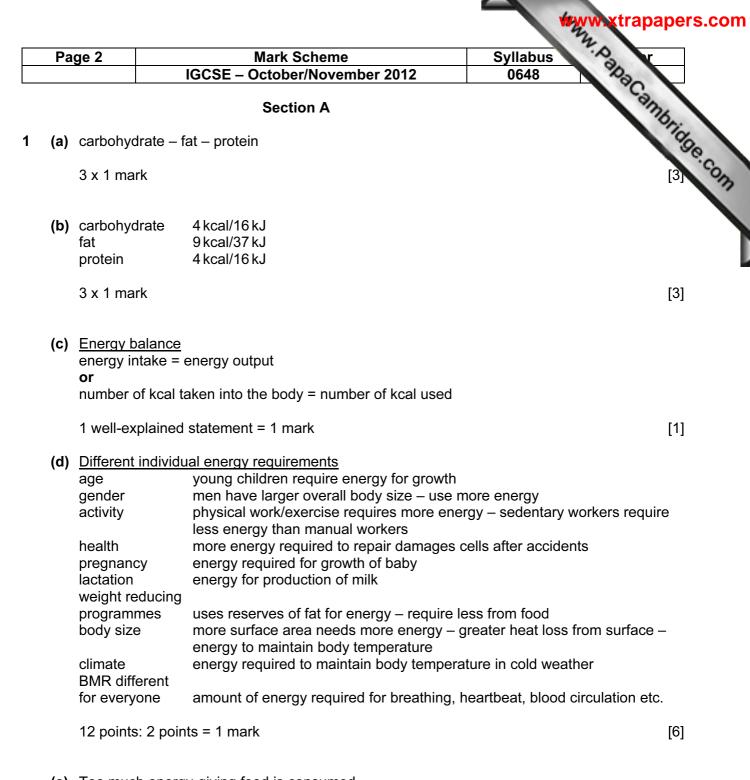

www.strapapers.com

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2012 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

(e) <u>Too much energy-giving food is consumed</u> excess converted to fat – stored under skin – adipose tissue – or around internal organs – leading to obesity – CHD – tendency towards diabetes – lethargy – breathlessness – high blood pressure – strokes – low self-esteem – problems during surgery etc.

8 points: 2 points = 1 mark

#### Section B

#### 5 (a) The use of a refrigerator

Cambridge.com keeps food longer - slows down rate of deterioration - reduces need for daily shopping and some foods can be served chilled - e.g. cold desserts, salads etc. but food will still spoil temperature 1-7 °C - ideally 4 °C - if lower than that, water will freeze - and spoil texture of food – if higher than that, will encourage bacterial growth cover - to prevent cross-contamination - and surface of food drying - and smell of food being absorbed by other foods - e.g. fish, cheese clean containers - so bacteria remaining in container do not pass to food cool food before refrigerating - or will raise temperature in refrigerator - and encourage growth of bacteria raw meat on bottom shelf - so juices do not drip onto cooked food - contain bacteria and will not be killed by heat if food is already cooked check 'use by' date - refrigerators only slow down food spoilage use food in rotation - oldest first so safest food kept till later do not overload/overfill/over-pack - allow cold air to circulate - and maintain a suitable temperature do not leave door open longer than necessary - cold air escapes - warmth encourages bacterial growth – more electricity needed to cool follow instructions on packages - to keep food in safest condition clean refrigerator regularly/wipe up spills - remove risk of bacterial growth defrost regularly unless automatic defrost - remove build up of ice - and make refrigerator work more efficiently etc.

10 points: 2 points = 1 mark

(b) Different uses of fats and oils

spreading on bread - butter, margarine frying - corn oil, sunflower seed oil - high flash point sauce-making - margarine, butter aeration - margarine traps air when creaming - cake-making and when rubbing in - in pastry-making – holds layers of pastry apart when rolling and folding – flaky pastry shortening - crumbly texture of shortcrust pastry, rock buns etc. for flavour - butter in rich cakes etc. for colour - in pastry, sauces etc. improve keeping quality - in rich cakes etc. sealing – melted butter/margarine on pate to retain moisture adds calories without adding bulk - fried food dressings – French dressing – adds moisture – and gloss forms an emulsion - mayonnaise basting - adds moisture to meat cooked by dry heat/grilled/roasted decorating - butter icing makes foods easier to eat/lubricates - butter on toast prevents sticking - oiled baking tins glazes - melted butter on new potatoes, carrots etc. storing/covering during storage to keep moist - olives etc. may add nutrients - fat, vitamins A/D

### Answers may include the following knowledge and understanding.

#### Reasons for choosing a vegetarian diet

religious beliefs - Hindus and Buddists are vegetarian etc.

follow traditions of family - brought up to follow vegetarian diet etc. - peer group pressure object to the slaughter of animals - think it is cruel - believe that animals have a right to life - object to the way animals are reared, kept in overcrowded conditions etc. expensive to rear animals - land could be used for crops - more people could be fed from the same area

dislike animal flesh - taste/texture etc.

meat is expensive to buy - difficult to store without refrigeration

belief that vegetarian diet is more healthy – animal fat has cholesterol – associated with CHD recent health scares - bird 'flu, BSE, Salmonella from eggs / chickens etc. / allergies green issues – methane from cows

#### Types of vegetarian diet

| vegan / strict vegetarian | consumes nothing of animal origin                    |
|---------------------------|--|
| lacto-vegetarian          | no animal flesh but consumes milk and its products   |
| ovo-vegetarian            | no animal flesh but eats eggs                        |
| lacto-ovo-vegetarian      | no animal flesh but consumes milk, eggs and products |

#### Ways to include HBV protein in vegetarian diets

lacto-vegetarians, ovo-vegetarians and lacto-ovo-vegetarians will get HBV - protein from milk, cheese and eggs

Quorn - mycoprotein - made to resemble meat - sausages / cutlets / mince

sliced meat substitutes for sandwiches etc. - not suitable for vegans - fibres stuck together with egg albumen

vegans - soya beans - contain all indispensable / essential amino-acids - only HBV from a plant source- soya products

flour - milk - tofu - tempeh etc. (not oil) - TVP

oil removed from beans - remainder is extruded into fibres - made to resemble meat - used in sausages / pies / curries etc.

combine LBV protein foods - in same meal - complementary protein

IAAs missing in one food can be supplied by the other

forms HBV\_protein – improves quality of protein in meal – e.g. nuts / pulses / cereals – beans on toast / lentil soup and bread etc.

Problems which could occur for those who follow a vegetarian diet

Cambridge.com shortage of vitamin A / retinol - add red/orange vegetables - green vegetables - marg fortified with vitamin A supplied as beta-carotene - converted to vitamin A in body shortage of vitamin B2 / riboflavin - include nuts / cereals / pulses / potatoes may lack vitamin B12 – deficiency causes pernicious anaemia supplied by yeast extract – added to breakfast cereals

vitamin D - to absorb calcium - fortified margarine - sunshine

calcium - fortified breakfast cereals - nuts / pulses / cereals

iron – fortified breakfast cereals / soya / green vegetables etc. – iron supplied as non-haem iron to vegans converted from ferric to ferrous form – by vitamin C – and stomach acid changes from non-haem iron to haem iron

vitamin C - to ensure absorption of iron -named fresh fruit and vegetables

may be low in energy – high in water content/fruit and vegetables

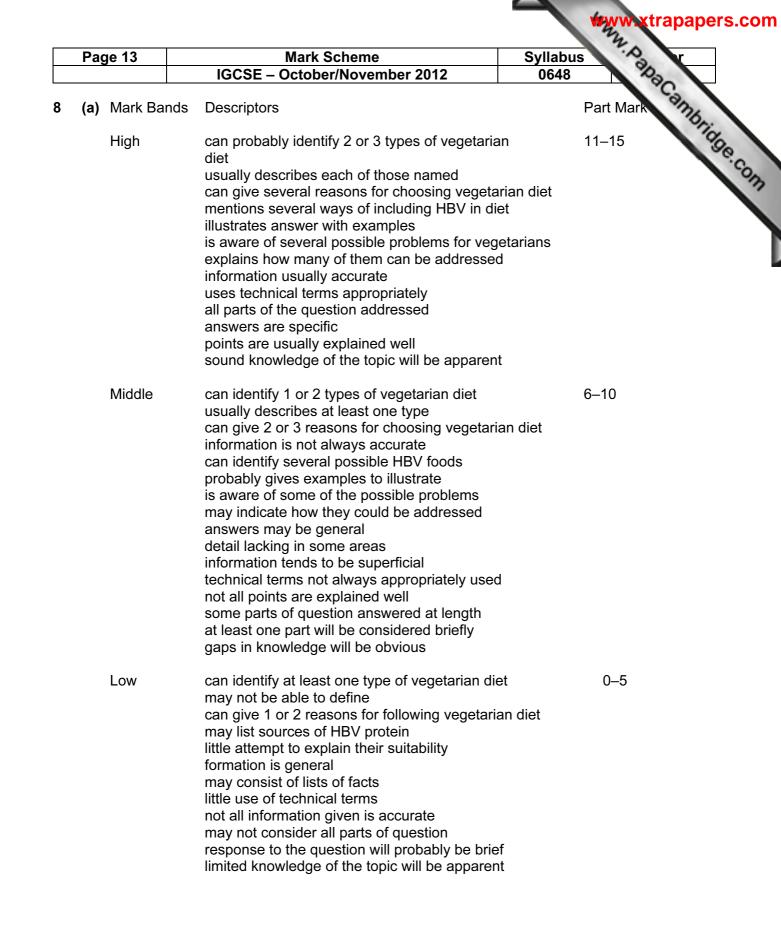

bulky due to cellulose - cannot eat enough to supply all nutrients - cook some fruit and vegetables to reduce bulk eat snacks - cereals / nuts / fruit / vegetables - energy dense

lack of variety – use herbs and spices – vary cooking methods

packaged / processed foods may contain 'animal' products

check ingredients list - know E numbers to avoid

may cause upset to digestive system - too much cellulose etc.
