

CAMBRIDGE INTERNATIONAL EXAMINATIONS
International General Certificate of Secondary Education

MARK SCHEME for the May/June 2014 series

0648 FOOD AND NUTRITION

0648/01

Paper 1 (Theory), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2014 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

| Page 2 | Mark Scheme | Syllabus | |
| | IGCSE – May/June 2014 | 0648 | |

Mark schemes will use these abbreviations

- ; separates marking points
- / alternatives
- **AVP** alternative valid point
- **ORA** or reverse argument
- underline actual word given must be used by candidate
- () the word / phrase in brackets is not required but sets the context
- max indicates the maximum number of marks
- *italics* used to denote words or phrases from the question

| | Answer | Marks | Guidance Examiners |
|---------|--|------------|---|
| 1 (a) | <i>minerals</i> iodine; phosphorous; sodium | max [2] | |
| | <i>vitamins</i> vit D /cholecalciferol; vit B; vit A /retinol; vit B ₂ / riboflavin; vit B ₁₂ /cobalamin; vit B ₉ /folate | max [2] | |
| (b) | osteoporosis; rickets; osteomalacia / adult rickets; tetany | max [2] | |
| (c) | rickets: soft bones; bent legs; pigeon chest; bow legs; bone deformities; fragile skull osteomalacia: weak bones; easily fractured; painful joints osteoporosis: brittle bones; easily fractured; decreasing height; porous bones tetany: muscle cramps / spasms | max [2] | no mark for renaming disease refer to one disease only |
| (d) (i) | vit D /cholecalciferol | [1] | |
| (ii) | <u>oily</u> fish / salmon / sardines / cod liver oil; eggs; liver; milk / cheese / yogurt / dairy products; margarine / butter; fortified breakfast cereals / named breakfast cereal; powdered milk / Marvel | max [2] | |
| (e) | green <u>leafy</u> vegetables / broccoli / cabbage / brassica vegetables; okra; soya beans / tofu; soya drinks with added calcium; seeds / nuts / brazil nuts / almonds / pecans / walnuts / cashews / pistachios; pulses; bread | max [2] | |
| (f) (i) | coating sauce is thicker than pouring sauce; coating sauce uses less milk / liquid; coating sauce clings to foods / coats foods / named example, e.g. cauliflower cheese; ORA | max [2] | |
| (ii) | 50 g <i>plain flour</i> ; 500 ml milk / water / stock | [1] [1] | |

| | | |
|---------------|------------------------------|-----------------|
| Page 4 | Mark Scheme | Syllabus |
| | IGCSE – May/June 2014 | 0648 |

| | | | |
|----------------|---|----------------|--|
| (iii) | melt fat; add flour and stir; heat gently for 1 min; starch granules soften; roux formed; remove from heat; gradually add milk; to form smooth paste; return to heat; stir constantly; bring to boil; starch granules burst; gelatinise; cook for 2 min; remove from heat; add in grated cheese immediately; do not return to heat | [5] | 2 points = 1 mark workable roux method required for full marks |
| (g) (i) | physical breakdown; teeth tear food into small pieces; small enough to swallow; tongue pushes food down throat; saliva moistens food for swallowing; no chemical breakdown of fat; no chemical breakdown of protein | max [1] | 2 points = 1 mark |
| (ii) | no physical breakdown; glands produce intestinal juice; protein digestion is completed; erepsin; converts peptones; to amino acids; fat further broken down; by lipase; into glycerol; and fatty acids; lactase; breaks down lactose; into glucose and galactose | max [3] | 2 points = 1 mark |
| 2 (a) | more expensive than fresh foods; contain additives; small portion size; high in fat; high in sugar; consumers become deskilled; excessive packaging; nutrients may be lost and not replaced; lack NSP | max [2] | 2 points = 1 mark |
| (b) | sugar absorbed into plaque on teeth; sugar broken down by microorganisms; sugar turned into acid; pH of plaque falls below 5.5; tooth enamel dissolves; weak area is left; cavity develops; whole tooth damaged/irreplaceable | max [4] | |
| (c) | diabetes: high blood sugar glucose; lack of insulin obesity: sugar high in calories; excess adipose tissue forms; under skin and around internal organs coronary heart disease; high blood sugar level leads to diabetes; more than doubles risk of developing CHD; lining of blood vessels becomes thicker; restricts blood flow; heart works harder | [3] | refer to 1 disease only 1 mark for naming disease; 2 marks for linked explanation |

| | | |
|--------|-----------------------|----------|
| Page 5 | Mark Scheme | Syllabus |
| | IGCSE – May/June 2014 | 0648 |

| | | | |
|---------|--|---------|--|
| (d) | buttered syrup; cane juice crystals; caramel; carob syrup; corn syrup; dextran; fruit juice concentrate; glucose; golden syrup; mannitol; maltodextrin; molasses; refiner's syrup; sorbitol; sorghum syrup; sucrose; fructose; maltose; honey; lactose; maple syrup | max [2] | |
| (e) | carbon, hydrogen, oxygen | [1] | all 3 elements required in any order |
| (f) | dry heat on starch; breaks down starch to dextrin; dextrans are yellow and brown; named example/apple pie; non-enzymic browning | max [2] | |
| 3 (a) | heat energy can be transferred from one point to another; heat flows from a high temperature to a lower one; until a constant temperature is achieved; heat transferred quickly through movement of liquid molecules/liquids; and gas molecules/gas; hot liquid expands and rises; cooler liquid takes its place; cooler liquid heats up; this expands and rises; convection current established; liquid becomes less dense; boiling/steaming/baking | max [6] | up to 2 marks available for a suitable diagram |
| (b) | blood pressure is abnormally high; causes the heart to work harder; exerts pressure on blood vessels; may damage arteries; fat deposits in arteries; narrows space for blood flow; salt causes tissues to retain water; contributes to increased blood pressure; may develop heart disease; have a stroke | max [5] | |
| (c) | a method of food preservation; using heat treatment; destroys (pathogenic/souring) bacteria found in milk/fruit juice/vegetable juice/beer; heated to 72°C; for 15 s; Holder method; heated to 63°C for 30 min; cooled quickly; to below 10°C; to prevent loss of nutrients; appearance/taste unaltered | max [5] | |
| (4) (a) | <p><i>cake sunk in middle.</i> too much sugar; too much raising agent; under cooked; oven door opened whilst cooking</p> <p><i>cake risen unevenly.</i> oven shelf not level; cake near oven's heat source</p> <p><i>cake risen to a peak.</i> cooked too quickly because oven too hot; too much mixture in tin; cake on high shelf; too much raising agent</p> <p><i>cake has hard, sugary crust.</i> too much sugar; didn't use caster sugar</p> | max [4] | all 4 causes required for full marks |

| | | |
|--------|-----------------------|----------|

| | | | |
|---------|---|------------|-------------------|
| (b) | shaping; proving | [1] [1] | |
| (c) | to mix the ingredients; to add strength to the final product; to form gliadin and glutenin proteins; proteins expand and form strands of gluten; kneading aids gluten production; kneading warms and stretches gluten strands; gluten gives bread its texture / creates a springy and elastic dough; if not kneaded enough will not be able to hold pockets of CO ₂ / will collapse / result in heavy / dense loaf | max [3] | |
| (d) | <i>carbohydrate</i> 4 kcal / 16 kJ; <i>fat</i> 9 kcal / 37 kJ; | [1] [1] | |
| 5 (a) | <i>Safe storage of food</i> <i>flour</i> (dry) container; cool; sealed; <i>cheese</i> wrapped in refrigerator / 1–5°C; <i>potatoes</i> (dry) dark cupboard; cool; <i>frozen fish</i> wrapped in freezer; –18°C | [4] | |
| (b) | diarrhoea; vomiting; fever; abdominal pain; nausea; double vision; headache | max [3] | |
| (c) | contains listeria / bacteria / not pasteurised woman may experience 'flu like symptoms / still birth / miscarriage / pneumonia / meningitis / blood poisoning; AVP | [1] [1] | |
| (d) | wear a hair net; beard net; wash hands thoroughly; dry with paper towel; remove jewellery; cover cuts with blue plaster; cut nails short; clean nails; no nail varnish; clean overall / apron; do not lick fingers; wash hands after blowing nose; wash hands after using toilet; do not pick scabs / spots; do not go to work if ill / suffering from diarrhoea / coughing; AVP | max [3] | 2 points = 1 mark |
| (e) (i) | stainless steel; marble; food grade plastic; granite; ceramic | max [1] | |
| (ii) | smooth; washable; non-toxic; non-porous; attractive; AVP | max [2] | |
| (f) | switch off / isolate appliance; do not touch the person until the appliance has been switched off; push appliance away from the person with dry wood / broom handle; check person is breathing / airway; resuscitate if needed; call for emergency assistance | max [3] | |

| | | |
