

CAMBRIDGE INTERNATIONAL EXAMINATIONS
International General Certificate of Secondary Education

MARK SCHEME for the October/November 2013 series

**0417 INFORMATION AND
COMMUNICATION TECHNOLOGY**

0417/02

Paper 2 (Practical Test A), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2013 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

Need for security

Have you been the victim of crime in the last 12 months? Do it Yourself or 'plug and play' CCTV (Closed-Circuit Television) lets users take control of home and business security. It gives a simple and affordable way for you to protect your family and assets.

DIY replaced by
 Do it Yourself X 2 1 mark

Traditionally you have needed to call on security companies to install and monitor systems for your home or business. For a fraction of the cost of professional surveillance, Do it Yourself CCTV security puts you in control with ease of use and convenience.

Body text 14 point serif, fully justified, single linespace 2 marks
 Two columns with 1 cm gap 1 mark

What could I use CCTV security solutions for?

The most common uses of CCTV are to:

- safeguard your family and monitor your property
- protect valuable property and prevent professional monitoring
- deter thieves, graffiti and unwanted behaviour
- create a 'smart home', integrating cameras with your TV and PC.

Which solution is right for me?

- Do you want to monitor your home, office, family, retail store, warehouse or building site?
- Do you need day filming or night vision or both?
- Do you want sound, high-resolution images, mono or colour, wired or wireless from your PC or mobile phone?
- Do you want to view via a TV, monitor or handheld viewer?
- Do you need to record through a digital video recorder (DVR) or VCR?

Nine subheads identified + formatted,
 to match subtitle 1 mark

How do I connect a camera to my TV/monitor?

Wireless cameras
 Wireless camera receiver (with power supply and video) cable that plugs into the video connectors on a TV or monitor. This is often referred to as phono plug. Wireless cameras can be connected to game consoles and DVD players. Plugging the receiver directly into a TV will allow you to view the images, but you

Name and candidate number

Centre Number

Wired cameras

Wired cameras use phono or BNC plugs to connect to the AV 'in' sockets. You simply connect this to your TV to start monitoring.

Image placed correctly in document 1 mark
Fills column with text wrapped 1 mark

How do I record video from cameras?

New digital video recording (DVR) technology enables you to monitor and record numerous cameras at the same time with motion detection triggers. You save the video on to a hard drive and then can play it back on the DVR or transfer it to alternative media.

How can I monitor remotely?

Many DVRs now include software and an Ethernet port to enable viewing on remote PCs with broadband internet connections. Video is sent to the host PC via the DVR, PCI

Today's Date

card or USB; the remote PC, with the appropriate software, is then able to access video streamed over the internet or network connection. More sophisticated systems email and SMS alerts in the event of the cameras detecting motion.

Can other devices interfere with wireless CCTV?

Yes, some common causes of interference are Wireless LAN equipment, cordless 2.4GHz telephones and microwave ovens (whilst they are actually cooking). Using a camera that has four switchable channels will allow you to change to a channel that is further away from the interference source. This will minimise the potential for interference.

Commonly used CCTV security terms

CCD

Charge Coupled Device. A high quality image sensor commonly found in portable camcorders and similar video equipment.

CMOS

Complementary quality image sensor used in digital cameras and many low-powered image devices such as USB webcams.

Text file inserted in correct place and formatted to match body text 1 mark
Three items of text bold and underscored 1 mark

Infrared (IR)

Infrared night vision allows cameras to 'see in the dark', or in low-light conditions, using IR LEDs (Infrared Light Emitting Diodes) as illumination for a camera.
