14 The head teacher of a school has employed Pierre, a systems analyst, to create a new database system to keep details of all students. Each student will be allocated a unique ten digit reference number.

For Examiner's Use

Pierre has written out some of the questions that the head teacher might ask. He can then analyse these in order to design a database which may answer these questions. Some are:

Which year is Johann Schmidt in? (the school has students in years 7 to 13) Does Anita Nash have a sibling (brother or sister) in the school?

(a) Complete the data dictionary table below giving the field names which would be used in the database and identifying a validation check for each field.

Field name	Validation check
Reference_number	
Year	
First_name	
	None

[6]

b)	Explain the differences between verification and validation giving reasons why both are needed when data is entered into a database.
