Paper 2 Practical Test A

March 2021

MARK SCHEME

Maximum Mark: 80

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the March 2021 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

This document consists of **19** printed pages.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Laboratory Equipment

Here are some examples of equipment you will use in the physics and engineering laboratories as you do your experimental work. You will find more detailed instructions for using the equipment in the manuals that we have produced for each lab-work experiment. For each piece of equipment, interactive tutorials and activities are provided for you to check your understanding of their use.

Two spelling errors corrected	1 mark
-------------------------------	--------

Vernier Scales

Vernier scales are used in several types of measuring devices. You will use them in the laboratory for measuring the diameter of a wire, the thickness of a metal plate, the length of a small object, the depth of a cavity, the diameter of a cylinder, the diameter of a sphere, the diameter of a thin rod, the diameter of a thin wire, the diameter of a thin tube, the diameter of a thin rod, the diameter of a thin wire, the diameter of a thin tube, the diameter of a thin rod, the diameter of a thin wire, the diameter of a thin tube.

Section break inserted above Vernier Scales	1 mark

small angles for setting up e.g. an astronomical

On a measuring device with a Vernier scale, this latter lies next to the main scale. It is designed so that ten of its divisions equal nine of those on the main scale. A rough reading can be taken on the main scale and this can then be refined by measuring a more precise value on the Vernier scale.

Vernier scales may provide readouts on a mechanical scale, using an analogue dial or with a digital display. The analogue display calliper provides the final readout on a dial, while the digital ones replace the dial with an electronic display.

Micrometers

These are used to make precise measurements of small objects. They also have a main (coarse) scale and a fine scale to refine the measurement. The micrometer will be equipped with a friction screw to tighten the jaws onto the object to be measured. The friction screw ensures the jaws do not overtighten on the object and possibly damage it. A locking lever locks the jaws in place once fixed on the object to be measured. The first reading is taken on the coarse scale and the second reading is taken on the fine scale by turning the "thimble". The fine reading is taken by moving the jaws by 0.5mm for each rotation.

Vernier Scale Callipers

These may be used to measure the:

external diameter of an object

internal diameter

depth of a cavity

Candidate details

Tawara University Science

**Digital Multimeters**

These can be used to measure various properties of electrical circuits. These properties include voltage, current and resistance. To measure the current, you would use the multimeter as an ammeter. You will also use one to measure voltage, or resistance using

in general, if you are unsure about the range of measurements you are taking, it is better to start with a high setting and work towards a lower one.

voltage on the vertical axis (Y-axis) plotted against time on the horizontal axis (X-axis). The display will scan repeatedly from left to right across the screen to make a trace or “waveform”.

These are just some of the items of equipment you will use in your experiments in the first year of lab work. You should familiarise yourself with them and their functions through the interactive tutorials and activities linked to this introduction.

Function Generator

Also known as a signal generator, this device can produce various patterns of voltage at different frequencies and amplitude. You can use it to test the response of a circuit to known signal inputs. Using a signal generator, you can produce sine, square or triangular waveforms. You can view these by connecting to an oscilloscope. See the interactive tutorials to check your understanding before connecting and using the signal generator in your lab sessions.

Laboratory Notebook Skills

You will also need to keep notes of your experiments in your lab report notebook. Conventions for keeping and presenting lab reports can be found in the tutorial, *[insert link to tutorial here]* but you should also consult your lab supervisor.

Correct text and brackets bold and italics 1 mark

Oscilloscope

As already mentioned, this piece of equipment will be used to display the output, for example, from a signal generator in visual form. A digital display will represent in two dimensions one or more potential differences. This will usually be

Why Do We Need Lab Books?

To keep a record of what you found, how you did it and what you think. An essential part of experimental science is a well-maintained lab book which records all your work. It is a place for you to record your data and the procedure you undertook. It is the place to write down all your ideas and your findings, even if, at the time, you think they are unimportant. In essence it contains all the evidence for your findings and

Candidate details

Tawara University Science

your logical deductions. The lab book is evidence of good laboratory practice.

A good lab book ensures that your colleagues can clearly follow your procedures and understand your logic.

- The lab book is evidence
- The lab book is a resource
- The lab book is NOT a copy of the experimental script
- The lab book is a bound A4 notebook.

You may alternatively keep a digital copy of your lab book using software we recommend.
