UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education

## WANN, PapaCambridge, com MARK SCHEME for the October/November 2011 question paper

## for the guidance of teachers

## 0413 PHYSICAL EDUCATION

0413/11

Paper 1, maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

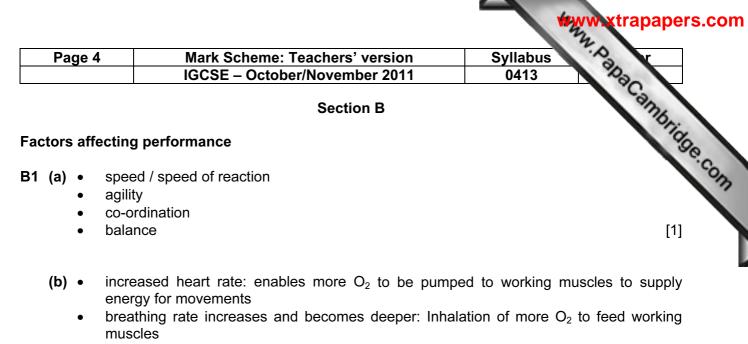

Mark schemes must be read in conjunction with the question papers and the report on the examination.

Cambridge will not enter into discussions or correspondence in connection with these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2011 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

ligaments:		Syllabus 0413	an
-	bones together (bone to bone)		10%
	e joints		19
	joints are kept in place		
<ul> <li>elastic</li> </ul>	to allow range of movement		
tendons:			
	t the local muscle to the bone		
	for flexibility and stretch		
<ul> <li>elastic</li> </ul>			[0]
• store a	nd release energy		[2]
• flovibili	ty: the range of movement around a joint		
	les must be referred to a particular sport and c	lescribe movement that e	nhances
perforr	· · · ·		
	must refer to a particular example:		
	ing to reach higher to catch a ball in netball		
	sed stride length when sprinting		
3. reducir	ng the risk of injury acceptable, however preventing	injury is not accepted	[2]
• extra c	urricular activities		
	issistance of specialist coaches		
	se facilities (use of school / use of local clubs)		
• teams			
<ul> <li>visiting</li> </ul>	sporting stars / celebrities / former pupils		
	rea co-operation / shared schemes		
• create	links with local clubs		[3]
	,		
	t payments / sponsorship		
	rships to athletes / family / coach		
	/ment related pility and access to training / facilities		
	nds / grants / "Sports-Aid"		[3]
			[0]

- perspiration / sweating: In order to cool body / prevent overheating
- (c) transport: transports essential elements around the body in the bloodstream such as  $O_2$ , nutrients, water and waste
  - **temperature control**: moves blood towards the skin surface thereby assisting in cooling
  - protection: transportation of antibodies in order to fight disease. Blood clotting for example, seals cuts [3]
- (d) bone width and density is increased
  - cartilage protects the ends of bone
  - cartilage thickens improving shock absorption in the joints
  - muscles, tendons and ligaments are strengthened around the joints
  - muscles adjust to greater workload
  - increased range of movement at joints / increased flexibility
  - muscles increase in size (hypertrophy)
  - increase in fast / slow twitch fibres (depending on type of training)
  - muscles can work harder for longer
- (e) red blood cells are taken out of the body / blood frozen
  - body compensates for this loss
  - blood cells injected back into body meaning O<sub>2</sub> capacity is unfairly increased
  - increased capacity to transport O<sub>2</sub>
  - simulate high altitude training without expense or effort
  - unfair advantage
  - side effects include allergies / virus / kidney damage

1 mark awarded for the danger

- (f) (i) intrinsic / self motivation: comes from own inner drives. playing for fun or enjoyment, satisfaction of playing well, pride in winning and enjoyment playing with others
  - extrinsic motivation comes from rewards and external pressures and influences. Playing to win games, trophies, medals. Pleasing others with our performance. [2]

- (e) strain (pulled) muscles / tendon where tissue is torn caused by sudden overstretching. Pulled hamstrings are common in football when suddenly extending the leg to reach a ball
  - sprain where the ligament has been stretched or torn because of violent twisting such as turning quickly in hockey and the players studs lodge and prevent turning movement
  - dislocation when a bone is pulled out of its normal position for example the humerus pulled from the shoulder joint, occurs in contact / collision sports such as rugby [2]
- (f) (i) carbohydrate 55%
  - fats 30%
  - proteins 15%

- [1]
- (ii) carbohydrate: bread / rice / pasta / sugars. Provide energy to sustain performance
  - **fats**: animal products / fish / oils. In addition to stored energy insulates and protects the body
  - proteins: meat / fish / eggs / poultry. Helps the body to grow and repair during times of injury
     [3]

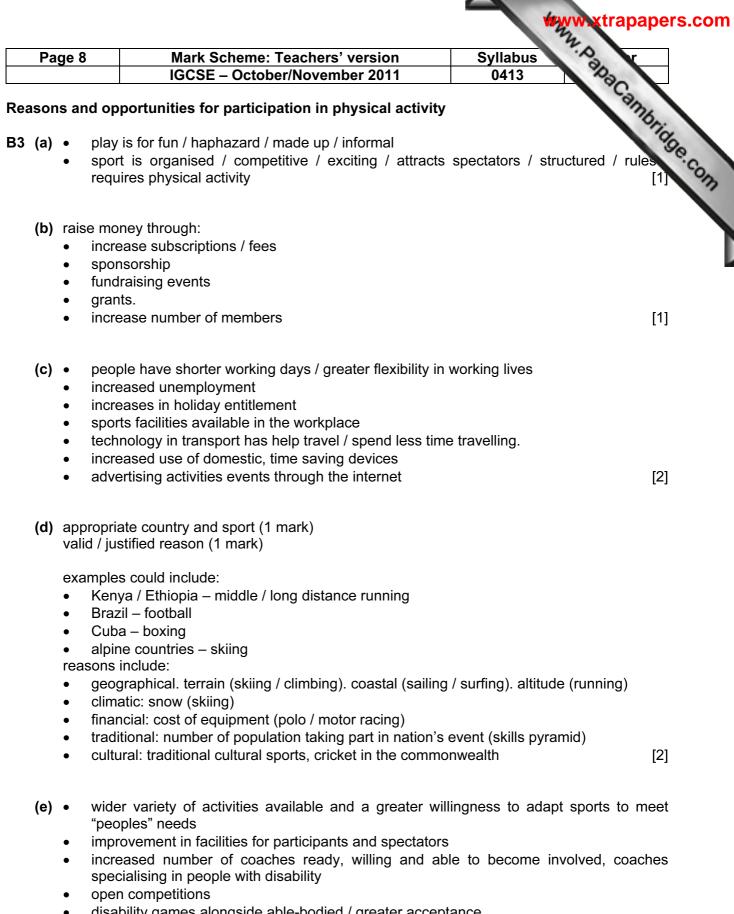

Page 7	Mark Scheme: Teachers' version	Syllabus	·	r
	IGCSE – October/November 2011	0413	10	

- (g) **cardiovascular endurance**: the ability of the heart and lungs to cope with acthology period of time, stamina for endurance or prolonged events such as mara "extra-time" in football. We can improve by taking part in regular exercise working heart between 60% to 80% of its maximum rate for a minimum of 12 minutes increase the time as we become fitter
  - **muscular endurance**: the ability to use our voluntary muscles many times without tiring. We can improve muscular endurance by training with light weights (40%–60% maximum) at speed with a high number of repetitions (20–30)
  - **speed**: the ability of our body or part of the body to move quickly for example in a sprint race or a smash in tennis. We can improve by increasing strength through programme of weight training; stronger muscles give more power and therefore speed. Improving reaction time and sprint starts. Agility training, improving skill to become more efficient.
  - **strength**: the amount of force a muscle can exert against a resistance for example weight lifting. We can improve by training with heavy weights (80%–100% maximum) using a low number of repetitions.
  - flexibility: the range of movement possible at a joint, also known as mobility or suppleness (acceptable) for example the ability of a gymnast to perform the splits. We can improve flexibility by repeatedly stretching our muscles and tendons and extending ligaments and supporting tissues beyond their normal range of movement for 10–20 seconds and repeating after a short rest.

Credit can also be given if candidates use components of skill related fitness with appropriate examples [6]

[Total: 20]

apers.com

- disability games alongside able-bodied / greater acceptance
- increase number of role models
- increased media coverage / sponsorship

[2]

	IGCSE – October/November 2011	0413	No.
	al: ts: transport / accommodation / equipment / e olarships	vent and entry fee	es / cite high
• pay	rs to be able to train and compete full time motes development for up and coming stars / raise	s confidence / motiva	ates
• spo	nsor		

- (f) individual:
  - costs: transport / accommodation / equipment / event and entry fees / clu scholarships
  - pays to be able to train and compete full time
  - promotes development for up and coming stars / raises confidence / motivates
  - sponsor
  - "free" advertising
  - image, especially when associated with winners
  - scholarships, university reaps the benefit of successful student performer
  - tax and hospitality: sponsors do not usually have to pay tax on money spent on sponsorship. free tickets to events to impress associates
  - corporate image

[3]

rapapers.com

- (g) sport accounts for a large percentage of viewing time allocation
  - event and match analysis allows the viewer to see events in fine detail, slow motion, replays, coaching points
  - television allows viewers to watch major events and competitions / reduces attendance / encourages participation
  - tv companies contribute financially
  - tv companies can dictate owing to scheduling / financial power which and when sports are shown
  - rules, clothing, timing of events can be changed
  - positive, more coverage and negative poor / no coverage of minority sports
  - pressure on athletes / teams with large audiences
