

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams or graphs.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use

This document consists of 19 printed pages and 5 blank pages.

1 A student has found three automobile lamps at the scrap yard. The student finds some printing on the lamps, and copies this into Fig. 1.1.

lamp	what is printe	ed on the lamp
1	24 V	36 W
2	12 V	18 W
3	6 V	18 W

He wants to compare the resistances of the three lamps using the circuit shown in Fig. 1.2.

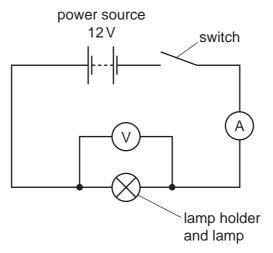

Fig. 1.2

- The student inserts lamp **1** into the lampholder.
- He closes the switch.
- He reads the voltmeter and ammeter and records the readings in Fig. 1.3.
- He repeats the experiment using lamp **2**.

lamp	voltmeter reading/V	ammeter reading/A	brightness of the lamp
1	11.9	0.72	dim
2			bright

Fig. 1.3

For iner's

For iner's 3 (a) The ammeter and voltmeter readings for lamp 2 are shown in Fig. 1.4. Record the readings in Fig. 1.3. 1.0 10 C 0 Fig. 1.4 (b) The student wants to use the equation V = IR to find the resistance of the lamps 1 and 2. (i) Rearrange the equation V = IR. R = _____ [1] (ii) Calculate the resistance of lamp 1 using the data from Fig. 1.3. resistance of lamp 1 = _____ ohms [1] (iii) Calculate the resistance of lamp 2 using the data from Fig. 1.3. resistance of lamp 2 = _____ ohms [1]

		2	
(c)	He	4 e student repeats the experiment with lamp 3 . fixes the lamp in the lampholder and closes the switch. The lamp glows bright, hort time and then the ammeter reading falls to 0.	For iner's
		e data from Fig. 1.1 and 1.3 to help you to explain what happened to lamp 3 when student used it in the circuit.	lidge.com
		[2]	
(d)	(i)	Use data from Fig. 1.1 and Fig. 1.3 to suggest a reason why lamp 1 gave only a dim light.	
		[1]	
	(ii)	Calculate the power in watts of lamp 2 , using data from Fig. 1.3.	

power of lamp 2 = _____watts [2]

Please turn over for Question 2.

WAN. Papacambridge.com 2 Potassium manganate(VII) (potassium permanganate) is a dark crystalline substant solution in water is dark purple. Potassium permanganate solution reacts with solution X. When the reaction is complete the purple colour disappears.

A student uses a dropping pipette and solution **X** to find out which one of three potassium permanganate solutions, A, B or C is the most concentrated. The apparatus is shown in Fig. 2.1.

potassium permanganate solutions

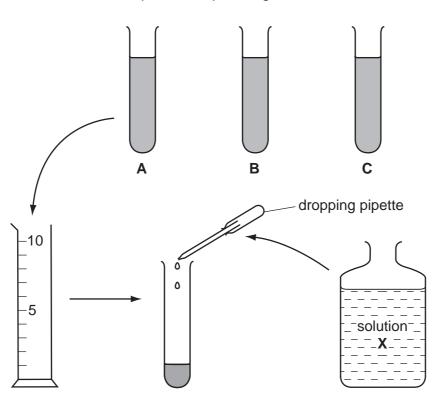

Fig. 2.1

Procedure

- She measures out some of solution **A** and pours it into a test-tube.
- She fills the dropping pipette with solution **X**. •
- She adds solution **X** drop by drop to solution **A**, counting the drops, until the reaction has finished.
- She records the number of drops added in Fig. 2.2.
- She repeats the experiment using solutions **B** and **C**.

solution	number of drops used
А	15
В	24
С	18

			apapers.com
(-)	(1)	7 What must the student do to make a fair comparison between the three so A, B and C?	
(a)	(1)	What must the student do to make a fair comparison between the three so A , B and C ?	For iner's [1] Uge Con
	(ii)	How will she make sure that all the reacting particles come into contact with eac other when the drops are added ?	ch Conn
			[1]
	(iii)	How will she know when to stop adding the drops of solution X ?	
	<i></i>		[1]
	(iv)	Which is the most concentrated of the solutions, A , B or C ?	
			[1]
(b)		ggest a way, using the apparatus in Fig. 2.1, of finding the accurate volume of or p of liquid from the teat pipette.	ne
			[2]

(c) The student carries out tests on solution X. She writes the results in Fig. 2.3.

Complete Fig. 2.3.

	test	observation		conclusion
(i)	To 2 cm ³ of solution X , add a few drops of dilute hydrochloric acid followed by aqueous barium chloride.		[1]	solution X contains sulfate ions
(ii)	To 2 cm ³ of solution X , add aqueous sodium hydroxide until no further change occurs.		[1]	solution X contains iron(II) ions

vith potential of the adds dilution is complete. ccurs. The student wants to discover the product of the reaction of solution X with poly permanganate. She places 2 cm³ of potassium permanganate solution in a test-tube. She adds dilu sulfuric acid. Then she carefully adds solution X drop by drop until the reaction is complete. To the mixture, she adds aqueous sodium hydroxide until no further change occurs. She observes a brown precipitate. (d) (i) Suggest the name of this brown precipitate. [1] (ii) What happens to the iron(II) ions when they react with potassium permanganate?

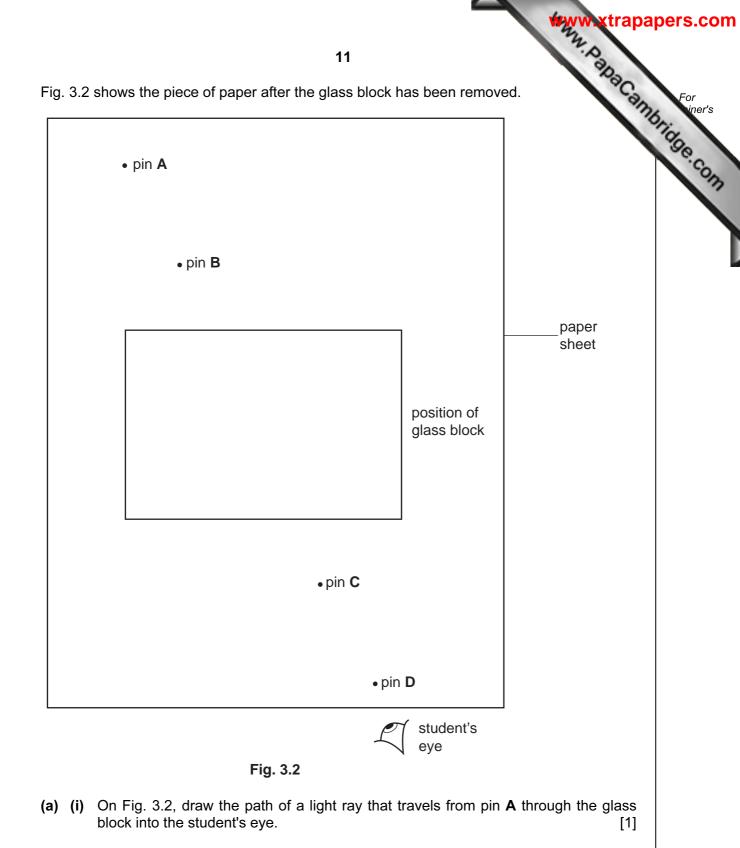

Please turn over for Question 3.

- He places the glass block on a sheet of paper on top of a flat piece of soft wood. •
- He draws a line on the paper all round the glass block. •

- He places two upright pins, **A** and **B**, in a line, at an angle to the side of the block. •
- Then he looks through the glass block at the two pins. •
- When he sees the two pins **A** and **B** in line, he places pins **C** and **D** on his side of the • block, in line with pins **A** and **B**.
- He removes the glass block and draws the path of a ray of light through the block.

- (ii) Draw the normal where the incident ray enters the glass block. See Fig. 3.1. [1]
- (iii) On Fig. 3.2, label i, the angle of incidence, and **r**, the angle of refraction. [1]
- (iv) On Fig. 3.2, measure i, the angle of incidence and r, the angle of refraction to the nearest degree. Record them in the first line of Fig. 3.3, on page 12. [2]

The student repeats the experiment, changing the angle of incidence each time, to give four more sets of readings. He records them in Fig. 3.3.

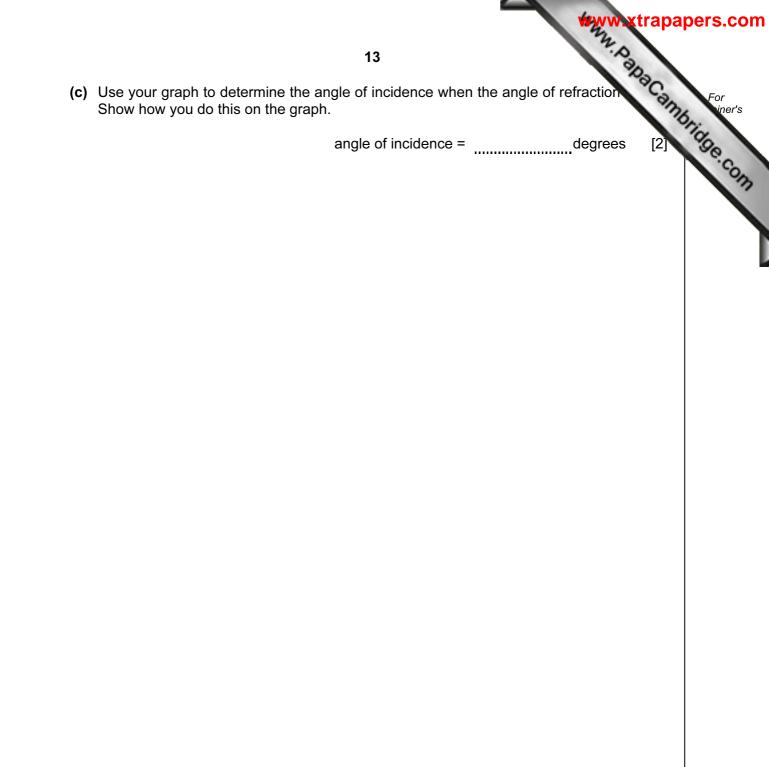

1	angle of refraction r/degrees
angle of incidence i/degrees	angle of refraction r /degrees
38	24
46	28
54	32
63	35

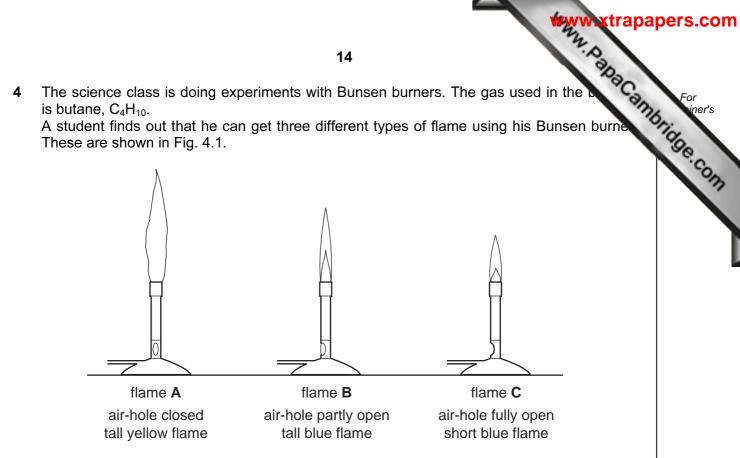

[3]

(b) On the graph grid provided, plot a graph of i (vertical axis) against r. Draw a smooth curve. Do not try to extend the line beyond the plotted points.

WANN, Papacambridge.com 5 Two students want to find out how high they can hit a ball. While student a hits a ball as high as he can into the air, student B uses a stopclock starts the clock when the ball is hit and stops it when the ball hits the ground t second later. Then student **B** hits the ball and student **A** uses the stopclock.

Fig. 5.1 shows how the ball moves through the air.

They record time t for each student's ball in Fig. 5.2.

The students decide that the ball takes $\frac{t}{2}$ seconds to fall from the maximum height, h, to the ground.
