Paper 5 Practical Test

October/November 2012

1 hour 30 minutes

Candidates answer on the Question Paper.

Additional Materials:

As listed in Instructions to Supervisors

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

Chemistry practical notes for this paper are printed on page 12.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use

Total		

This document consists of 8 printed pages and 4 blank pages.

2

BLANK PAGE

1 (a) In this experiment you will be investigating the effect of a force acting at angles.

Set up two smooth rods or pulleys 20 cm apart and at the same horizontal level at least 30 cm above the bench.

Attach 50 g masses to both ends of a piece of thread so that when the thread is placed over the two smooth rods or pulleys, the masses are clear of the bench. See Fig. 1.1.

Fig. 1.1

- (i) Hang a 10 g mass, *m*, from a point **halfway** between the smooth rods or pulleys, ensuring that the thread moves smoothly over the rods.
 - Allow the mass to drop freely; do not pull it down.
 - Hold the protractor sheet behind the apparatus and adjust the position of the sheet so that the angle, θ , as shown in Fig. 1.2, is the same on both sides.
 - Measure angle, θ , and enter the value in column 2 of Table 1.1 on page 4. [1]

Fig. 1.2

Table 1.1

mass, m/g	angle θ/°	sine θ
0	0	0.00
10		
20		
40		
60		
80		

- (ii) Remove the 10 g mass, m.
 - Repeat (a)(i) for mass, m, equal to 20 g, 40 g, 60 g, and 80 g.
 - Measure and record the values of angle, θ , in column 2 of Table 1.1. [5]

Note that the value for θ when no mass is hung from the middle of the thread has been entered in Table 1.1 for you.

(iii) Using the values in Table 1.2, or by using a calculator, find the sine of the angle, θ , for each mass used and enter the values in column 3 of Table 1.1. [1]

Table 1.2

angle θ/°	sine θ	angle θ/°	sine θ	angle θ/°	sine θ
0	0.00	35	0.57	70	0.94
5	0.09	40	0.64	75	0.97
10	0.17	45	0.71	80	0.98
15	0.26	50	0.77	85	1.00
20	0.34	55	0.82	90	1.00
25	0.42	60	0.87		
30	0.50	65	0.91		

(ii) Extend the line you have drawn so that it reaches a sine θ value of 1.0.

Read the value of mass, m, which corresponds with the sine θ value of 1.0.

[5]

(iii) In theory the value of the mass, m, in (b)(ii) should equal the sum of the two masses on the ends of the thread (100g).

In practice it is rarely equal to the sum of the two masses.

Suggest another force which could cause the difference.

of dilute hydrochloric acid. Keep your finger on the mouth of the test-tube for one minute. Test any gas produced with a lighted splint. Record your observations. [2] (ii) Name the gas produced in this reaction. name of gas is		www.xtrap

CHEMISTRY PRACTICAL NOTES

Test for anions

Test for anions	12 CHEMISTRY PRACTICAL NO	TES test result
anion	test	test result
carbonate (CO ₃ ²⁻)	add dilute acid	effervescence, carbon dioxide produced
chloride (C <i>l</i> ⁻) [in solution]	acidify with dilute nitric acid, then add aqueous silver nitrate	white ppt.
nitrate (NO ₃ -) [in solution]	add aqueous sodium hydroxide then aluminium foil; warm carefully	ammonia produced
sulfate (SO ₄ ²⁻) [in solution]	acidify then add aqueous barium chloride <i>or</i> aqueous barium nitrate	white ppt.

Test for aqueous cations

cation	effect of aqueous sodium hydroxide	effect of aqueous ammonia
ammonium (NH ₄ ⁺)	ammonia produced on warming	-
copper(II) (Cu ²⁺)	light blue ppt., insoluble in excess	light blue ppt., soluble in excess giving a dark blue solution
iron(II) (Fe ²⁺)	green ppt., insoluble in excess	green ppt., insoluble in excess
iron(III) (Fe ³⁺)	red-brown ppt., insoluble in excess	red-brown ppt., insoluble in excess
zinc (Zn ²⁺)	white ppt., soluble in excess giving a colourless solution	white ppt., soluble in excess giving a colourless solution

Test for gases

gas	test and test results
ammonia (NH ₃)	turns damp red litmus paper blue
carbon dioxide (CO ₂)	turns limewater milky
chlorine (Cl ₂)	bleaches damp litmus paper
hydrogen (H ₂)	"pops" with a lighted splint
oxygen (O ₂)	relights a glowing splint
