CAMBRIDGE INTERNATIONAL EXAMINATIONS Cambridge International General Certificate of Secondary Education

Www.PapaCambridge.com MARK SCHEME for the October/November 2014 series

0443 PHYSICS (US)

0443/23

Paper 2 (Core Theory), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2014 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

® IGCSE is the registered trademark of Cambridge International Examinations.

	NOTES ABOUT MARK SCHEME SYMBOLS AND OTHER	MATTERS AND
B marks	B marks are independent marks, which do not depend on other be scored, the point to which it refers must be seen specifically answer.	
M marks	M marks are method marks upon which accuracy marks (A mar M mark to be scored, the point to which it refers must be seen i If a candidate fails to score a particular M mark, then none of the can be scored.	n a candidate's answer.
C marks	C marks are compensatory marks in general applicable to nume can be scored even if the point to which they refer are not writte provided subsequent working gives evidence that they mus example, if an equation carries a C mark and the candidate doe actual equation but does correct substitution or working which s equation, then the C mark is scored. A C mark is not awarded if points which contradict each other. Points which are wrong but	n down by the candidat st have known it. For s not write down the hows he knew the a candidate makes two
A marks	A marks are accuracy or answer marks which either depend on one of the ways which allow a C mark to be scored. A marks are final answers to numerical questions. If a final numerical answe correct, with the correct unit and an acceptable number of signif marks for that question are normally awarded. It is very occasio a correct answer by an entirely wrong approach. In these rare c award the A mark, but award C marks on their merits. An A mar a dependent mark.	e commonly awarded for r, eligible for A marks, is ficant figures, all the nally possible to arrive a ircumstances, do not
Brackets ()	Brackets around words or units in the mark scheme are intende	d to indicate wording

- Brackets () Brackets around words or units in the mark scheme are intended to indicate wording used to clarify the mark scheme, but the marks do not depend on seeing the words or units in brackets, e.g. 10 (J) means that the mark is scored for 10, regardless of the unit given.
- <u>Underlining</u> Underlining indicates that this **must** be seen in the answer offered, or something very similar.
- OR / or This indicates alternative answers, any one of which is satisfactory for scoring the marks.
- e.e.o.o. This means "each error or omission".
- o.w.t.t.e. This means "or words to that effect".
- Ignore This indicates that something which is not correct or irrelevant is to be disregarded and does not cause a right plus wrong penalty.
- Spelling Be generous about spelling and use of English. If an answer can be understood to mean what we want, give credit. However, do not allow ambiguities, e.g. spelling which suggests confusion between reflection / refraction / diffraction or thermistor / transformer.
- Not / NOT This indicates that an incorrect answer is not to be disregarded, but cancels another otherwise correct alternative offered by the candidate, i.e. right plus wrong penalty applies.

PA CAMBRIDGE

Page 3	Mark Scheme	Sy. Oe
	Cambridge IGCSE – October/November 2014	044 20

- ecf meaning "error carried forward" is mainly applicable to numerical questions, bu particular circumstances be applied in non-numerical questions. This indicates the candidate has made an earlier mistake and has carried an incorrect value forward to subsequent stages of working, marks indicated by ecf may be awarded, provided the subsequent working is correct, bearing in mind the earlier mistake. This prevents a candidate from being penalised more than once for a particular mistake, but **only** applies to marks annotated ecf.
- Sig. figs. Answers are normally acceptable to any number of significant figures \geq 2. Any exceptions to this general rule will be specified in the mark scheme.

Arithmetic errors

Deduct one mark if the **only** error in arriving at a final answer is clearly an arithmetic one. Regard a power-of-ten error as an arithmetic error.

Transcription errors

Deduct one mark if the only error in arriving at a final answer is because previously calculated data has clearly been misread but used correctly.

Fractions Allow fractions only where specified in the mark scheme.
