Paper 5 Practical Test

May/June 2017

1 hour 15 minutes

Candidates answer on the Question Paper.

Additional Materials: As listed in the Confidential Instructions.

## **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name in the spaces at the top of the page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** questions.

You are advised to spend about 20 minutes on each of questions 1 to 3, and 15 minutes on question 4. Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

The syllabus is approved for use in England, Wales and Northern Ireland as a Cambridge International Level 1/Level 2 Certificate.

This document consists of 12 printed pages.

1 In this experiment, you will investigate the resistance of two resistance wires. The circuit has been set up for you.

Carry out the following instructions, referring to Fig. 1.1.

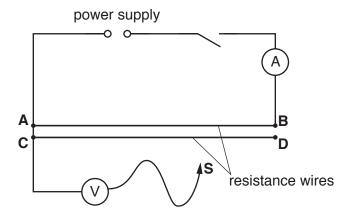

Fig. 1.1

- (a) (i) Switch on. Place the sliding contact **S** on the resistance wire **AB** at a distance  $l = 0.200 \, \text{m}$  from point **A**.
  - Measure and record in Table 1.1 the current I in the circuit and the potential difference (p.d.) V across the length  $l = 0.200 \,\mathrm{m}$  of resistance wire AB.
  - Calculate the resistance R of the length  $l = 0.200 \,\mathrm{m}$  of resistance wire **AB**, using the equation  $R = \frac{V}{I}$ . Record R in the table.
  - Repeat the procedure using the distance  $l = 0.400 \,\mathrm{m}$ . Switch off.
  - Complete the column headings in the table.

Table 1.1

1/	V/	I/	R/
0.200			
0.400			

[4]

(ii) Calculate the difference between the two values for R.

difference = ......[1]

(b)	(i)	•	Switch on. Place the sliding contact <b>S</b> on the resistance wire <b>AB</b> at a distance $l = 0.500 \text{m}$ from point <b>A</b> .			
		•	Measure and record the current $I_1$ in the circuit and the potential difference $V_1$ .			
			$I_{\uparrow} = \dots$			
			<i>V</i> <sub>1</sub> =			
		•	Calculate the resistance $R_1$ of the length $l=0.500\mathrm{m}$ of resistance wire <b>AB</b> , using the equation $R_1=\frac{V_1}{I_1}$ .			
			R <sub>1</sub> =[1]			
	(ii)	Use	the short connecting lead provided to connect points <b>B</b> and <b>D</b> .			
		•	Switch on. Place the sliding contact <b>S</b> on the resistance wire <b>AB</b> at a distance $l = 0.500\mathrm{m}$ from point <b>A</b> .			
		•	Measure and record the current $I_2$ in the circuit and the potential difference $V_2$ .			
			<i>I</i> <sub>2</sub> =			
			<i>V</i> <sub>2</sub> =			
			Calculate the combined resistance $R_2$ of resistance wires <b>AB</b> and <b>CD</b> , using the equation $R_2 = \frac{V_2}{I_2}$ .			
			R <sub>2</sub> =[2]			
(c)			results in <b>(b)(i)</b> and <b>(b)(ii)</b> to compare the resistance $R_1$ of wire <b>AB</b> with the resistance res <b>AB</b> and <b>CD</b> connected together.			
	Tick	one	box next to the description that most closely matches your results.			
			$R_1 = R_2$			
			$R_1 = 2R_2$			
			$2R_1 = R_2$			
			There is no simple relationship between $R_1$ and $R_2$ . [1]			

(d)	Suggest <b>two</b> reasons why different students all carrying out this experiment carefully, with the same apparatus, may not obtain identical results.
	1
	2
	[2]
	[Total: 11]

2 In this experiment, you will investigate the principle of moments.

Carry out the following instructions, referring to Fig. 2.1.

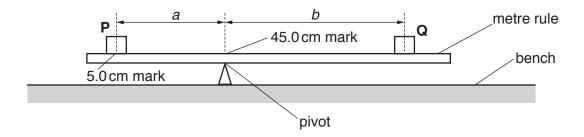

Fig. 2.1

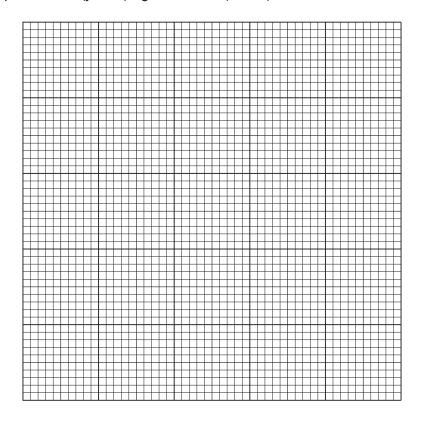

- (a) Place the load **P** on the metre rule at the 5.0 cm mark. Place the metre rule on the pivot at the 45.0 cm mark. Place load **Q** on the rule and adjust its position so that the metre rule is as near as possible to being balanced.
  - Record, in Table 2.1, the distance *a* between the centre of load **P** and the pivot.
  - Measure and record in the table the distance b from the centre of load Q to the pivot.
  - Repeat the steps above, placing the load **P** at the 10.0 cm mark, 15.0 cm mark, 20.0 cm mark and 25.0 cm mark. Keep the pivot at the 45.0 cm mark each time. Record all the readings in the table.

Table 2.1

a/cm	b/cm

[2]

**(b)** Plot a graph of b/cm (y-axis) against a/cm (x-axis). Start both axes at the origin (0,0).

[4]

**(c)** A student suggests that *a* is directly proportional to *b*.

State whether your readings graph line.	support this suggestion	Justify your answer by r	eference to the
			[1]

(d) (i) • Use the balance provided to measure the mass m, in grams, of the metre rule.

$$m = \dots g$$

• Calculate the value of mX, where  $X = 0.05 \,\mathrm{N\,cm/g}$ .

$$mX = \dots$$
 Ncm [1]

	(ii)	•	Use the value of $a$ in the first row of Table 2.1 to calculate $Pa$ , where $P = 1.00 \text{N}$ . $P$ is the weight of load $\textbf{P}$ . Include the unit.
		•	$Pa = \dots$ Use the value of $b$ in the first row of Table 2.1 to calculate $Qb$ , where $Q = 0.80\mathrm{N}$ . $Q$ is the weight of load $\mathbf{Q}$ . Include the unit.
(e)	A st	tuder	$Qb = \qquad $
		k ca lised	refully at Fig. 2.1 and your answers to (d) and suggest what the student has not

3 In this experiment, you will investigate the refraction of light passing through a transparent block.

Carry out the following instructions, using the separate ray-trace sheet provided. You may refer to Fig. 3.1 for guidance.

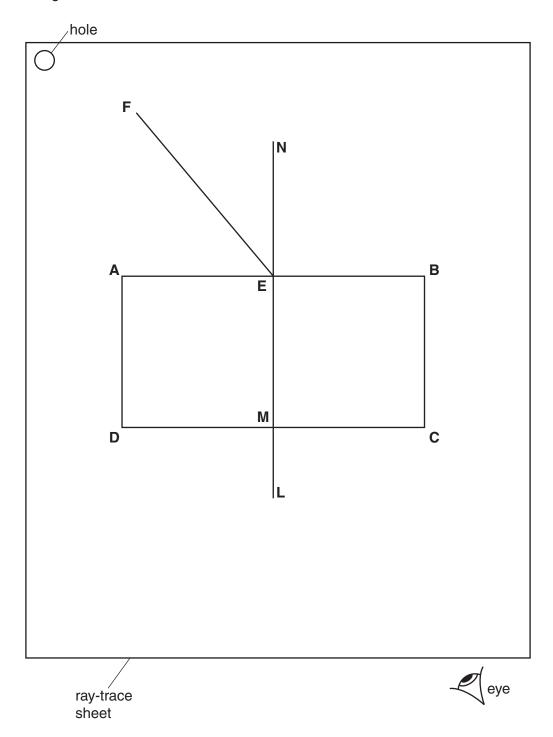

Fig. 3.1

- Place the transparent block, largest face down, on the ray-trace sheet supplied. The block should be approximately in the middle of the paper. Draw the outline of the block **ABCD**.
- Remove the block and draw a normal NL at the centre of side AB. Label the point E where
  the normal crosses AB. Label the point M where the normal crosses CD.

[2]

		3
(a)	•	Draw a line <b>FE</b> to the left of the normal, and at an angle of incidence $i = 40^{\circ}$ to the normal, as shown in Fig. 3.1.
	•	Place two pins $P_1$ and $P_2$ on the line <b>FE</b> , placing one pin close to <b>E</b> . Label the positions of $P_1$ and $P_2$ .
	•	Replace the block and observe the images of $P_1$ and $P_2$ through side <b>CD</b> of the block so that the images of $P_1$ and $P_2$ appear one behind the other. Place two pins $P_3$ and $P_4$ between your eye and the block so that $P_3$ and $P_4$ , and the images of $P_1$ and $P_2$ seen through the block, appear one behind the other. Label the positions of $P_3$ and $P_4$ . Remove the block.
		[2]
(b)	•	Draw a line joining the positions of $P_3$ and $P_4$ . Continue the line until it meets the normal <b>NL</b> . Label the point <b>K</b> where this line crosses <b>CD</b> .
	•	Measure and record the angle $\alpha$ between the line joining the positions of $P_3$ and $P_4$ and the normal $\textbf{NL}.$
		α =
	•	Measure and record the length $x$ between points $\mathbf{M}$ and $\mathbf{K}$ .
		X =
		[3]
(c)	•	Repeat the steps in (a) but with the line FE to the right of the normal.
	•	Draw a line joining the new positions of $P_3$ and $P_4$ . Continue the line until it meets the normal <b>NL</b> . Label the point <b>Q</b> where this line crosses <b>CD</b> .
	•	Measure and record the angle $\beta$ between the line joining the new positions of P <sub>3</sub> and P <sub>4</sub> and the normal <b>NL</b> .
		$\beta$ =
	•	Measure and record the length $y$ between points $\mathbf{M}$ and $\mathbf{Q}$ .
		y =[3]
(d)	$\beta$ a	student suggests that the results for $\alpha$ and $x$ should be the same as the results for nd $y$ . State whether your results support this suggestion. Justify your answer by reference he results.
	stat	ement

(e)	Suggest <b>one</b> precaution that you should take with this experiment to obtain reliable results.
	[1]
	Tie your ray-trace sheet into this Question Paper between pages 8 and 9.
	[Total: 11]

4 A student is investigating the effect of draughts (moving air) on the rate of cooling of hot water.

The following apparatus is available:

electric fan with four speed settings supply of hot water thermometer 250 cm<sup>3</sup> beaker 250 cm<sup>3</sup> measuring cylinder stopwatch clamp, boss and stand.

Plan an experiment to investigate the effect of draughts on the rate of cooling of hot water. You are **not** required to carry out this investigation.

## You should:

- explain briefly how you would carry out the investigation
- state the key variables that you would control
- draw a table, or tables, with column headings, to show how you would display your readings (you are **not** required to enter any readings in the table)
- explain how you would use your readings to reach a conclusion.

You may draw a diagram if it helps your explanation.
