Paper 2 (Core)

May/June 2008

1 hour 15 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

A copy of the Periodic Table is printed on page 20.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

ole are not the norm	

[1]

1 The Periodic Table shows all of the chemical elements arranged into groups and pen

Fig. 1.1 shows part of the Periodic Table. The letters in this table are **not** the norm chemical symbols of the elements.

	Ι	II						Ш	IV	٧	VI	VII	0
1													Α
2	F												Е
3	С							Н					
4	G				В							D	

Fig. 1.1

(a)	Complete the	statements	below	using	letters,	chosen	from	A to	Η,	which	refer	to
	elements in Fig	g. 1.1. Letter	s may l	be used	d once,	more tha	an once	e or r	not a	at all.		

	•	The element shown as letter	is an alkali metal in period 3.	
	•	The element shown as letter	is the noble gas with the lowest density	
	•	The three elements shown as letters	and	
		have very similar chemical properties	to each other.	
	•	The element shown as letter	is sometimes used as a catalyst.	[4]
(b)		e elements sodium and sulphur are bot lium oxide and sulphur dioxide respective Explain the meaning of the term oxidis	•	ıce
	(1)	Laplain the meaning of the term oxidis		

[1]

(ii)	Sodium oxide	e reacts with water to form solution P .	•
	Sulphur dioxi	de reacts with water to form solution Q .	2
	Predict and e	xplain the colour of Universal Indicator solution when added to P and	
	colour in P		
	explanation		
	colour in Q		
	explanation

3	A man	drives a golf ball with his club and it flies through the air for nearly 200 metres.	For
	(a) (i)	State the form of energy given to the ball by the club when the ball is hit.	78Hidis mer
			[1]
	(ii)	State the type of energy gained by the ball as it rises into the air after being hit	

(b) As the golfer moves around the course in a golf cart, his movement is measured. The measurements are plotted on the graph in Fig. 3.1.

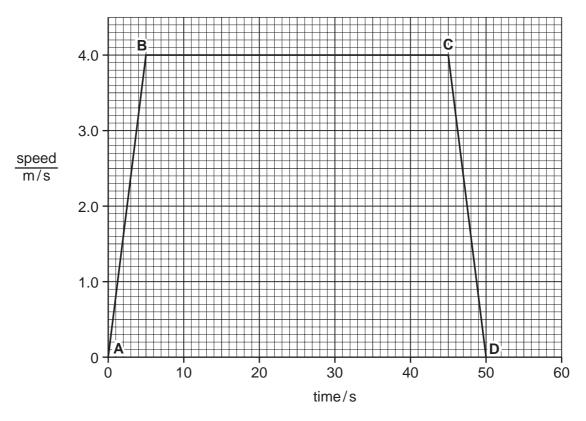

Fig. 3.1

A – B	
B-C	
C - D	
	[3]
What is the speed of the cart after 3 seconds?	

(ii)

(i) Describe what is happening between

_____m/s [1]

				Can
(c)	The	e golfer hits the ball along the ground. It travels 6 m in 3 s.	`	1
	Cal	culate the average speed of the ball.		`
	Sta	te the formula that you use and show your working.		
		formula		
		working		
			m/s	[2]
(d)	The	golfer's bag of clubs has a mass of 6kg.		
	(i)	Calculate the weight of the bag of clubs.		
		Assume that the gravitational field strength on Earth is 10 N/kg.		
			N	[1]
	(ii)	Calculate the work done by the golfer when the bag is lifted 0.5 m.		
	(,	State the formula that you use and show your working.		
		formula		
		working		
			J	[2]

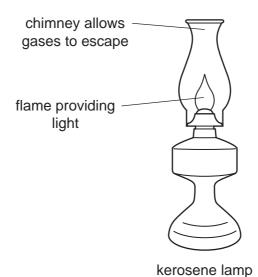

Kerosene is a mixture of hydrocarbons used as a fuel for aircraft and for lighting cooking.

(a) Kerosene is obtained from petroleum (crude oil) and is a liquid which boils in the range $150\,^{\circ}\text{C} - 200\,^{\circ}\text{C}$.

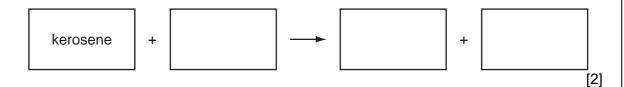

(i)	Name the process used to separate kerosene from petroleum.
	[1]
(ii)	State the important difference between the various compounds in petroleum which enables them to be separated by the process you have named in (i).
	[1]

(b) The light from a kerosene lamp is provided by the flame produced when kerosene burns in air.

The lamp must be carefully designed and operated to ensure that most of the kerosene undergoes complete combustion.

(i) Complete the **word** chemical equation for the complete combustion of kerosene.

(ii)	Describe one observation which shows that the reaction occurring in the keros lamp is exothermic.	My
		[1]

(c) The full chemical symbol for carbon is shown below.

¹²₆ C

Draw a diagram of a carbon atom. Label the nucleus and show the full electron configuration.

[2]

5 Fig. 5.1 shows the quantity of carbon dioxide that was emitted to the atmosphere by industrial company, between 2000 and 2005.

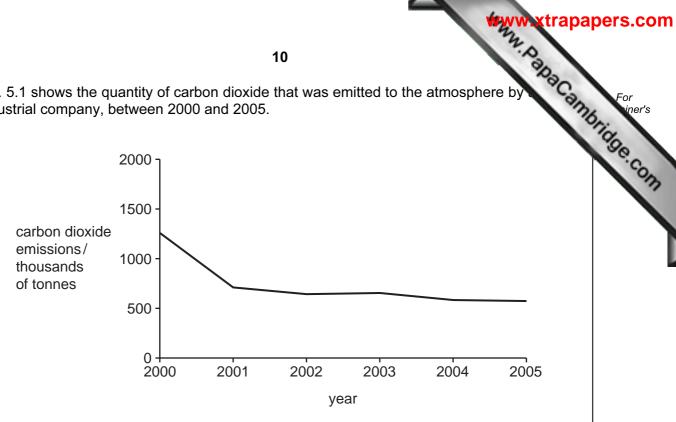

Fig. 5.1

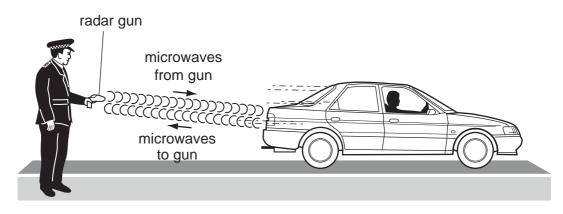

(a)	Describe how the company's carbon dioxide emissions changed between 2000 and 2005.
	[2]
(b)	The company stated that these carbon dioxide emissions included those relating to the electricity that it used.
	Explain how using electricity can be responsible for emissions of carbon dioxide.
	[2]
(c)	Apart from using less electricity, suggest one other way that the company could reduce its carbon dioxide emissions.
	[1]

(d)	In 1997, at a meeting in the city of Kyoto in Japan, many countries in the world an agreement to reduce their emissions of carbon dioxide. The agreement came force in 2005.
	Explain why we need to reduce emissions of carbon dioxide.
	[2]
(e)	Tropical rainforests can help to combat rising levels of carbon dioxide, because they take it from the air and use it in photosynthesis.
	Describe one other reason why we should try to conserve tropical rainforests.
	[2]

6 (a) A policeman is using a radar gun to measure the speed of a car.

The radar gun emits microwaves which hit the moving car and bounce back to receiver in the radar gun.

A computer in the radar gun calculates the speed of the car.

(i) What type of waves are microwaves?

(ii)

	[1]
The waves bounce off the car back towards the radar gun. What is th called?	is process

[1]

- **(b)** A car has two headlamps and two rear lamps. All four lamps are connected in parallel with each other across a 12 V battery.
 - (i) Complete the circuit diagram below to show how the four lamps are connected to the battery. Include one switch in your circuit which will control all four lamps.

[2]

____cm

	(ii)	If the filament in one lamp breaks, the other three stay lit. Explain whappens.
(c)		. 6.1 shows a spring. The spring is 10 cm long. A metal nut is hung on the spring the length is now 13 cm.
		10 cm
		Fig. 6.1
	Cal	culate the length of the spring if 3 more identical nuts are hung on the spring.
	Sho	ow your working.

ons. For

(a)	 A student wrote down some properties of alpha, beta and gamma radiations. Draw a line from each property to the correct radiation. 		
	Dra	w a line from each property to the corre	ect radiation.
		stopped by paper	alpha
		contains negatively charged particles	
þ	asse	es through several centimetres of lead	beta
	р	asses through paper but stopped by a few millimetres of aluminium	
		has no mass	gamma
			[3]
(b)	(i)	Gamma radiation can be used to ste gamma radiation makes it suitable for	erilise surgical instruments. What property of this purpose?
			[1]
	(ii) State one other use for radiation from a radioactive source.		
			[1]
(c)	In an experiment a radiation detector was set up and used to measure background radiation. The background radiation in the laboratory was found to be 40 counts per minute.		
	(i)	What is background radiation?	
			[1]
	(ii)	State one source of background radia	tion.
			[1]
	(iii)	•	r the detector and a reading of 1200 counts ne count rate of the radioactive source?
			counts per minute [1]

9 Fig. 9.1 shows apparatus which can be used to reduce copper oxide to copper.

Copper oxide is a black powder and during the reaction metallic copper forms inside to reaction tube.

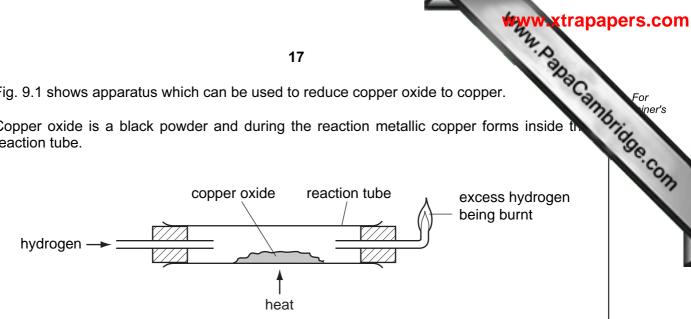

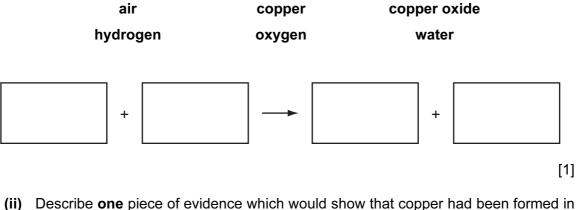

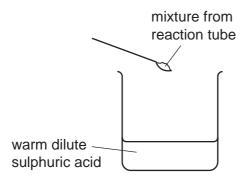

Fig. 9.1

(a) (i) Select from the list of substances below to complete the word equation for the reaction in Fig. 9.1.

(ii) Describe one piece of evidence which would show that copper had been formed in this reaction. [1] (b) When a student carried out the reaction in Fig. 9.1 she realised the material lend the reaction tube was a mixture of metallic copper and unreacted copper oxide.

WWW. Papa Cambridge.com In order to separate the metallic copper, she stirred the material from the reaction tube with warm dilute sulphuric acid for several minutes. She then filtered the mixture as shown in Fig. 9.2.

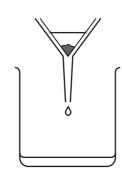

Fig. 9.2

	(i)	Name the copper compound formed when sulphuric acid reacts with copper oxide	е.
			[1]
	(ii)	The copper compound you have named in (i) is soluble.	
		Explain why the method shown in Fig. 9.2 is successful in separating metal copper from the original mixture of copper and copper oxide.	lic
			[2]
(c)	Cop	pper oxide is a compound of a metal and a non-metal.	
	(i)	Name the type of chemical bonding in copper oxide.	
			[1]
	(ii)	Explain why there is a strong force of attraction between the copper and oxic particles in copper oxide.	de
			••••
			[2]

(d) Metallic copper can also be obtained by electrolysis.

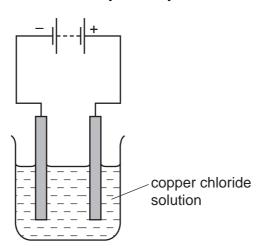

Fig. 9.3

Describe what would be seen at each of the electrodes when the electrolysis shown in Fig. 9.3 is carried out.

at the positive electrode	
at the negative electrode
