Paper 2 (Core)

October/November 2011

1 hour 15 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** questions.

A copy of the Periodic Table is printed on page 24.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use

This document consists of **21** printed pages and **3** blank pages.

1 Coral reefs are found in shallow seawater. Limestone is a common type of rock found in Earth's crust. Both coral reefs and limestone are made mainly of the ionic compound calcium carbonate.

(a) A student used the apparatus shown in Fig. 1.1 to test a rock sample to discover whether or not it is limestone.

Fig. 1.1

The student observed that a gas was given off and that the limewater in the small test-tube became cloudy.

(i) Name the gas that was given off. [1]

(ii) State the chemical formula of hydrochloric acid.
..... [1]

(iii) After some time, the student observed that the gas stopped forming, but a small piece of the rock sample remained in the large side-arm tube.

Explain why gas stopped forming.

.....
.....
..... [2]

(iv) The student carried out a flame test on the solution that remained in the large side-arm tube. This test produced an orange-red colour.

Name the element that this observation suggests is contained in the rock sample.

..... [1]

(b) In recent years, the amount of carbon dioxide dissolving in seawater has increased.

During this period, many coral reefs have become weakened and damaged.

(i) State and explain briefly how an increase in carbon dioxide concentration will affect the pH of seawater.

.....
.....
..... [2]

(ii) Suggest a reason why an increase in carbon dioxide concentration might be responsible for damage to coral reefs.

.....
..... [1]

- 2 (a) Fig. 2.1 shows the horizontal forces acting on an aircraft moving along the runway. These forces are balanced.

Fig. 2.1

- (i) The arrow to the right represents the driving force produced by the engines.

On the diagram, name the other force.

[1]

- (ii) Explain what is meant by the phrase *forces are balanced*.

.....
 [1]

- (iii) Describe the movement of the aircraft when these forces are balanced.

.....
 [1]

- (b) In the air, the aircraft travels at 80 m/s for one hour.

Calculate the distance travelled.

State the formula that you use and show your working.

formula used

working

..... m [2]

(c) People who fly frequently have greater exposure to ionising radiation than those who do not fly.

(i) Explain why exposure to ionising radiation may be harmful.

.....
.....
..... [2]

(ii) This ionising radiation is cosmic radiation from outer space. This is one source of background radiation.

State **one** other natural source of background radiation.

..... [1]

(d) The aircraft is able to navigate using radar. This involves using microwaves. These are part of the electromagnetic spectrum.

Name **one** other wave which is part of the electromagnetic spectrum and give a use for this radiation.

name

use [2]

3 (a) Complete the word equation for aerobic respiration.

oxygen + → + [2]

(b) Describe how oxygen is transported from the lungs to a cell in a human muscle.

.....
.....
..... [2]

(c) An athlete ran on a treadmill at a slow speed for 5 minutes. She then ran on the same treadmill at a faster speed for 5 minutes.

Fig. 3.1 shows the volume of oxygen she used per minute during both runs.

Fig. 3.1

(i) State the volume of oxygen used per minute by the athlete before she began to run.

..... dm³ [1]

(ii) Describe how the volume of oxygen used per minute during the fast run differs from the slow run.

.....
.....
..... [2]

(iii) Suggest an explanation for the differences you have described in (ii).

.....
.....
..... [2]

(d) Professional athletes do not smoke cigarettes because smoking can cause emphysema. This reduces the ability of oxygen to diffuse into the blood from the lungs.

Explain what is meant by *emphysema*.

.....
..... [1]

4 Fig. 4.1 shows an electric hairdryer.

Fig. 4.1

(a) Fig. 4.2 shows the circuit diagram for the hairdryer.

Fig. 4.2

(i) State which of the switches must be closed (on) for the heater in the hairdryer to work.

..... [1]

(ii) A student wanted to determine the resistance of the heater.

Fig. 4.3 shows the circuit he built to measure the current passing through the heater and the potential difference across the heater.

Fig. 4.3

His experiment did not work because his circuit was incorrect.

Draw the correct circuit in the space below.

[2]

(b) The electricity used in the hairdryer was generated at a power station.

(i) Name a fossil fuel that can be used in power stations.

..... [1]

(ii) Power is transmitted from the power station over large distances.

A high voltage is always used. Explain why.

.....

..... [1]

The high voltage is produced by a transformer.

Fig. 4.4 shows a simple transformer.

Fig. 4.4

(iii) Use the equation

$$V_p/V_s = N_p/N_s$$

to calculate the number of turns in the secondary coil.

Show your working.

number of turns = [1]

(iv) Transformers are also used between power lines and people's houses.

Explain why.

.....

.....

..... [2]

For
iner's

5 Fig. 5.1 shows a section through a flower.

Fig. 5.1

(a) (i) State the function of each of the following parts of the flower.

- petal
- anther [2]

(ii) Name the part of the flower that

- develops into a seed,
- develops into a fruit. [2]

(b) Flowers are involved in sexual reproduction.

Complete the table to show whether each statement is true for asexual reproduction, sexual reproduction, both or neither.

Use a tick (✓) for a correct statement and a cross (✗) for an incorrect statement. You must write either a tick or cross in each space in the table.

The first statement has been completed for you.

statement	asexual reproduction	sexual reproduction
gametes are involved	✗	✓
new individuals are produced		
a zygote is produced		
offspring are always genetically identical		

- 6 Nordic gold is an alloy of four metals used to make coins.

Table 6.1 shows information about the metals contained in Nordic gold.

Table 6.1

metal	% by mass in Nordic gold	compound from which the metal is extracted
aluminium	5	Al_2O_3
copper		CuFeS_2
tin	1	SnO_2
zinc	5	ZnS

- (a) (i) Complete Table 6.1 by stating the percentage of copper in Nordic gold. [1]

- (ii) Suggest how Nordic gold could be made.

.....
 [1]

- (iii) In the right hand column, the elements present in compounds can be identified by their symbols.

Name a metallic element present in one of the compounds in Table 6.1 which is **not** present in Nordic gold.

..... [1]

- (iv) Suggest **two** properties of Nordic gold, other than its appearance, that make it a suitable material from which to make coins.

1
 2 [2]

- (b) (i) Tin may be extracted from tin oxide by heating a mixture of tin oxide and carbon. The other product of this reaction is carbon monoxide.

Write a **word** chemical equation for this reaction.

..... [1]

(ii) State and explain which substance is **oxidised** when tin is extracted from tin
substance which is oxidised
explanation
..... [2]

(c) (i) Aluminium is extracted from the ionic compound aluminium oxide by electrolysis.
Explain the meanings of the following terms that are important in electrolysis.
cathode
electrolyte
..... [3]

(ii) State how the position of aluminium in the Periodic Table shows that aluminium
atoms have three electrons in their outer shell.
.....
..... [1]

7 (a) Fig. 7.1 shows a mother pushing her child in a baby buggy. She uses a force of 100 N.

Fig. 7.1

The baby buggy is pushed 2000 m.

Calculate how much work has been done.

State the formula that you use and show your working.

formula used

working

..... J [2]

(b) A child is playing on a swing. This is shown in Fig. 7.2.

At the top of the oscillation, the child and swing are momentarily at rest.

Fig. 7.2

(i) Write the correct energy type in the space to complete the box.

gravitational potential energy at the top of the oscillation	=	gravitational potential energy at the bottom of the oscillation	+ energy at the bottom of the oscillation	+	energy losses
---	---	--	---	--	---	---------------

[1]

(ii) Suggest a form of energy which is lost from the system.

..... [1]

(iii) Suggest where the lost energy goes.

..... [1]

(c) The child weighs 400 N.

The Earth's gravitational field strength is 10 N/kg.

(i) State the mass of the child.

..... kg [2]

17

(ii) The average density of the human body is 1020 kg/m^3 .

Calculate the volume of the child.

State the formula that you use and show your working.

formula used

working

..... m^3 [1]

8 Fig. 8.1 shows a tree frog that lives in a tropical rain forest.

Fig. 8.1

(a) Tree frogs feed on insects. Enzymes in their alimentary canal break down large molecules in the insects into small ones.

(i) State the correct biological term for this process. [1]

(ii) Explain why this process is necessary for the frog's survival.

.....
..... [1]

(iii) Use words from the list to complete the sentences about enzymes.

- | | | | |
|----------------------|---------------|------------------|------------------|
| carbohydrates | cells | denatured | dissolved |
| hydrogen | killed | oxygen | proteins |

Enzymes are that catalyse chemical reactions in living organisms. One example of an enzyme is catalase, which breaks down hydrogen peroxide to water and Enzymes are by high temperatures. [3]

(b) Tropical rain forests have a high species diversity.

(i) Explain what is meant by *species diversity*.

.....
..... [1]

(ii) Many species of tree frog have become extinct in the last ten years.

Suggest how the loss of tree frogs from the rain forest could damage the ecosystem.

.....

.....

.....

..... [2]

winner's

www.PapaCambridge.com

9 Hydrocarbons are compounds which contain only the elements hydrogen and carbon.

(a) The simplest hydrocarbon is methane, which is an important fuel.

(i) State **one** natural source of methane.

..... [1]

(ii) Complete the displayed (graphical) formula of a methane molecule.

[2]

(iii) Carbon dioxide and carbon monoxide are compounds released into the atmosphere when methane burns.

Describe **one** environmental disadvantage of each compound.

carbon dioxide

carbon monoxide

[3]

(b) Table 9.1 shows the molecular formulae and boiling points of four hydrocarbons.

Table 9.1

molecular formula	boiling point/°C
C_6H_{14}	69
$C_{10}H_{22}$	174
$C_{12}H_{26}$	216
C_5H_{12}	36

(i) Name a process which could be used to separate a mixture of the compounds in Table 9.1.

..... [1]

(ii) Use the information in Table 9.1 to describe how the boiling point of a hydrocarbon is affected by the mass of its molecules.

.....
.....
..... [2]
