

### **Cambridge Assessment International Education**

Cambridge International General Certificate of Secondary Education

COMBINED SCIENCE 0653/13

Paper 1 Multiple Choice (Core) May/June 2019

45 minutes

Additional Materials: Multiple Choice Answer Sheet

Soft clean eraser

Soft pencil (type B or HB is recommended)

#### **READ THESE INSTRUCTIONS FIRST**

Write in soft pencil.

Do not use staples, paper clips, glue or correction fluid.

Write your name, centre number and candidate number on the Answer Sheet in the spaces provided unless this has been done for you.

DO NOT WRITE IN ANY BARCODES.

There are **forty** questions on this paper. Answer **all** questions. For each question there are four possible answers **A**, **B**, **C** and **D**.

Choose the **one** you consider correct and record your choice in **soft pencil** on the separate Answer Sheet.

### Read the instructions on the Answer Sheet very carefully.

Each correct answer will score one mark. A mark will not be deducted for a wrong answer.

Any rough working should be done in this booklet.

A copy of the Periodic Table is printed on page 16.

Electronic calculators may be used.

1 Which diagram correctly represents a plant cell?

- 2 Which substance moves through a partially permeable membrane by osmosis?
  - **A** hormones
  - **B** oxygen
  - **C** sugar
  - **D** water
- 3 Which substances are used and produced during photosynthesis?

|   | substances used            | substances produced        |
|---|----------------------------|----------------------------|
| Α | carbon dioxide and glucose | oxygen and water           |
| В | carbon dioxide and water   | glucose and oxygen         |
| С | glucose and oxygen         | carbon dioxide and water   |
| D | oxygen and water           | carbon dioxide and glucose |

- **4** What is a function of the small intestine?
  - A It cuts food into small pieces.
  - **B** It provides a large surface area for absorption.
  - **C** It provides space for the storage of faeces.
  - **D** It stores food.
- **5** The diagram shows a section through the heart.

Which labels show the two ventricles in the heart?

- **A** 1 and 2
- **B** 2 and 3
- **C** 3 and 4
- **D** 4 and 1
- 6 Physical activity affects our rate and depth of breathing.

What happens during **increased** physical activity?

|   | rate of breathing | depth of breathing |
|---|-------------------|--------------------|
| Α | decreases         | decreases          |
| В | decreases         | increases          |
| С | increases         | decreases          |
| D | increases         | increases          |

7 How does adrenaline affect blood glucose concentration and pulse rate?

|   | blood glucose<br>concentration | pulse rate |
|---|--------------------------------|------------|
| Α | decreases                      | decreases  |
| В | decreases                      | increases  |
| С | increases                      | decreases  |
| D | increases                      | increases  |

8 Diagram 1 shows a growing seedling after the first few days' growth.

The seedling was then rotated, held in the position shown in diagram 2 and placed in the dark for three days.

What is the shape of the seedling three days later?

9 What are the features of sexual reproduction?

|   | fusion<br>of nuclei | nature of offspring    |
|---|---------------------|------------------------|
| Α | no                  | genetically dissimilar |
| В | yes                 | genetically identical  |
| С | no                  | genetically identical  |
| D | yes                 | genetically dissimilar |

- 10 Which process is the transfer of pollen grains from the anther to the stigma?
  - **A** fertilisation
  - **B** germination
  - **C** pollination
  - **D** transpiration
- 11 During sexual intercourse the penis transfers sperm cells to the vagina.

What is the pathway for sperm cells from their site of production to the vagina?

- A sperm ducts → testes → urethra → vagina
- **B** testes → sperm ducts → urethra → vagina
- **C** testes  $\rightarrow$  urethra  $\rightarrow$  sperm ducts  $\rightarrow$  vagina
- **D** urethra  $\rightarrow$  testes  $\rightarrow$  sperm ducts  $\rightarrow$  vagina
- **12** What is the source of energy input in food chains and food webs?
  - A carbohydrates
  - B nutrients in the soil
  - **C** oxygen
  - **D** the Sun

13 Which graph shows the relationship between the increase in deforestation and the carbon dioxide concentrations in the atmosphere?

**14** The diagram shows apparatus used for filtration.

Why can sugar and salt **not** be separated by using this apparatus?

- **A** They are both compounds.
- **B** They are both white.
- **C** They both dissolve in water.
- **D** They both have the same size particles.

15 Which description of the named substance is correct?

|   | substance         | element or mixture |
|---|-------------------|--------------------|
| Α | air               | mixture            |
| В | brass             | element            |
| С | carbon dioxide    | element            |
| D | hydrogen chloride | mixture            |

16 The equation for the reaction between magnesium and dilute hydrochloric acid is shown.

$$Mg + xHCl \rightarrow MgCl_2 + yH_2$$

What are the values of *x* and *y*?

|   | X | У |
|---|---|---|
| Α | 1 | 1 |
| В | 1 | 2 |
| С | 2 | 1 |
| D | 2 | 2 |

17 Concentrated aqueous sodium chloride is electrolysed using the apparatus shown.

A piece of damp blue litmus paper is held above each electrode.

Which row shows what happens to the colour of the litmus paper during the electrolysis?

|   | positive electrode  | negative electrode  |  |
|---|---------------------|---------------------|--|
| Α | litmus is unchanged | litmus is unchanged |  |
| В | litmus is unchanged | litmus turns white  |  |
| С | litmus turns white  | litmus is unchanged |  |
| D | litmus turns white  | litmus turns white  |  |

**18** The temperatures at the start and at the end of four chemical reactions are shown.

Which reaction is the most exothermic?

|   | temperature at start of reaction/°C | temperature at end of reaction/°C |
|---|-------------------------------------|-----------------------------------|
| Α | 10                                  | 30                                |
| В | 15                                  | 14                                |
| С | 18                                  | 35                                |
| D | 20                                  | 18                                |

**19** Zinc reacts with excess dilute sulfuric acid to form hydrogen gas.

Copper sulfate can act as a catalyst for this reaction.

Which statement is **not** correct?

- If more concentrated sulfuric acid is used the rate of the reaction increases.
- В If the temperature is increased it takes less time for the zinc to react completely.
- Larger pieces of zinc produce more hydrogen every ten seconds than the same mass of powdered zinc.
- When copper sulfate is added to the mixture more hydrogen is formed every second.
- **20** When hydrogen gas is passed over heated lead oxide, lead and water are produced.

Which substance is reduced during the reaction?

- hydrogen
- В lead
- C lead oxide
- D water
- 21 Which aqueous ion gives a white precipitate with aqueous sodium hydroxide and with aqueous ammonia?
  - A Cu<sup>2+</sup>
- **B** Fe<sup>2+</sup> **C** Fe<sup>3+</sup>
- **D** Zn<sup>2+</sup>
- 22 Which row describes the physical state of the Group VII elements at room temperature?

|   | chlorine | bromine | iodine |  |
|---|----------|---------|--------|--|
| Α | gas      | gas     | liquid |  |
| В | gas      | liquid  | solid  |  |
| С | liquid   | liquid  | gas    |  |
| D | liquid   | solid   | solid  |  |

- 23 Which two elements do **not** form an alloy?
  - A carbon and sulfur
  - В carbon and iron
  - C copper and zinc
  - silver and gold D

| 24 | Wh  | hich process is used to extract copper from copper oxide?           |           |        |                   |                |                    |         |              |
|----|-----|---|-----------|--------|-------------------|----------------|--------------------|---------|--------------|
|    | A   | heating   | copper    | oxid   | e with carbon     |                |                    |         |              |
|    | В   | heating copper oxide with carbon dioxide                            |           |        |                   |                |                    |         |              |
|    | С   | heating copper oxide with hydrochloric acid                         |           |        |                   |                |                    |         |              |
|    | D   | heating   | copper    | oxid   | e with steam      |                |                    |         |              |
| 25 | Wh  | ny is chlorine added to water during its purification for drinking? |           |        |                   |                |                    |         |              |
|    | Α   | to disso  | lve solid | l imp  | ourities          |                |                    |         |              |

|    |     |   |           |        |                   |                |                    |         |              |

| 30 | Which | property o | f an object | cannot be | changed | by a t | force? |
|----|-------|------------|-------------|-----------|---------|--------|--------|
|----|-------|------------|-------------|-----------|---------|--------|--------|

- A mass
- **B** motion
- C shape
- **D** size

# **31** The temperature of a gas rises.

What happens to the molecules of the gas?

- **A** Their average speed decreases.
- **B** Their average speed increases.
- C They contract.
- **D** They expand.

# **32** Benzene and glycerine are two substances.

The table gives the melting point and the boiling point of benzene and of glycerine.

|           | melting point/°C | boiling point/°C |  |
|-----------|------------------|------------------|--|
| benzene   | 5.4              | 80               |  |
| glycerine | 18               | 290              |  |

At which temperature are both benzene and glycerine liquid?

- **A** 0°C
- **B** 50 °C
- **C** 90 °C
- **D** 300 °C

**33** The diagram shows a vacuum flask containing a hot liquid in a cold room.

X and Y are points on the inside surfaces of the walls of the flask.

How is thermal energy transferred through the vacuum between X and Y?

- A by conduction and convection
- **B** by conduction only
- **C** by radiation and convection
- **D** by radiation only
- **34** The diagram represents a wave at one moment.

Which labelled arrows represent the amplitude and the wavelength of the wave?

|   | amplitude | wavelength |
|---|-----------|------------|
| Α | Р         | R          |
| В | Р         | S          |
| С | Q         | R          |
| D | Q         | S          |

**35** The diagram shows light incident on a plane mirror.

The angle between the ray and the mirror is 35°.

What is the angle of reflection?

- **A** 35°
- **B** 55°
- **C** 70°
- **D** 110°

36 Which electromagnetic radiation has the lowest frequency?

- A gamma
- **B** infrared
- C radio
- **D** ultraviolet

37 Three loudspeakers vibrate at different frequencies of 5 hertz, 15 kilohertz and 50 kilohertz.

Which row shows whether the vibrations from each loudspeaker can be heard by a healthy human ear?

|   | 5 hertz | 15 kilohertz | 50 kilohertz |
|---|---------|--------------|--------------|
| Α | no      | no           | no           |
| В | no      | yes          | no           |
| С | yes     | no           | yes          |
| D | yes     | yes          | yes          |

- **38** What is the unit for electromotive force (e.m.f.)?
  - **A** J **B** N **C** V **D** W
- 39 In which circuit is there a current of 2.0 A?

40 A mains circuit can safely supply a current of up to 40 A.

The current in a hairdryer is 2A when it is operating normally. The hairdryer is connected to the mains by a lead which can safely carry up to 5A.

What is the correct fuse to protect the hairdryer?

- A 1A fuse
- B 3A fuse
- C 10 A fuse
- **D** 50 A fuse
