Www.PapaCambridge.com 3 (iii) State one observation which would show that the reaction between metal water is exothermic. (b) Fig. 1.2 shows the apparatus and some of the substances needed to make an electrical cell. sodium chloride strips of metals **Q** and **S**, salt beaker and connecting wires Fig. 1.2 (i) State the other substance needed to make the cell. [1] (ii) In the space below, draw a diagram showing how the apparatus and substances should be used to make an electrical cell whose voltage is being measured. [2] (iii) Explain why metal R, shown in Fig. 1.1, would be unsuitable for use as an electrode in this electrical cell. [1]

- 2 Sheep, like most mammals, have skin covered by hair. The covering of hair on a s called a fleece. The fibres which make up the fleece are called wool. Wool fibres are en which means that they can stretch and then return to their original length.
 - (a) Fig. 2.1 shows how the length of wool fibres changes as different forces are applied to them.

[1]

4

- Www.papacambridge.com 5 (b) Wool helps sheep to maintain their body temperature in cold conditions. With re to methods of heat transfer, suggest how wool reduces heat loss from a sheep's to the air. _____ [2] (c) Merino sheep are kept for their excellent wool. The finer the wool, the better the price that a farmer can get for it. One farmer kept a flock of sheep on a farm in a part of Australia where the climate is hot and dry. A second farmer kept sheep in a wetter, cooler area. The fleeces of the sheep belonging to the first farmer had fewer, thicker fibres than the fleeces of the sheep belonging to the second farmer. Suggest **two** different factors which might account for this variation between the two flocks of sheep. [2] (d) Having hair on the skin is a characteristic of mammals. What type of skin covering would you find on an animal from each of the following groups?
 - (i) reptiles
 [1]

 (ii) amphibians

(d) Bees may be eaten by birds called bee-eaters.	
(i) Use the information in this question to construct a food chain including bee-eate	rs.
	[2]
(ii) Which organisms in your food chain are consumers?	
	[1]

- 6 Electricity is a useful form of energy.
 - (a) Use the information given to answer the questions below.

Wind power

Wind can be used as an energy source to produce electrical energy. One wind turbine is able to generate 2 megawatts (MW) of power.

Nuclear power

A nuclear power station uses enriched uranium as a fuel. Radioactive waste materials are produced. A typical nuclear power station can generate 1500 MW.

Electricity demand

Typical demand for electric power in an industrial country is about 50 000 MW.

(i) State one advantage and one disadvantage (apart from cost) of using each energy source to generate electricity in an industrial country.

	using wind power	using nuclear power
advantage		
disadvantage		

- [4]
- (ii) Why are scientists trying to find alternatives to fossil fuels for generating electricity?

[1]

(b) (i) Name the device which increases the voltage of the electricity generated at power stations before transmission.

.....[1]

(ii) Explain why it is advantageous to increase the voltage of the electricity before transmission.

[1]

7 (a) The boxes below list foods each containing a particular type of nutrient, and the that nutrient in the body.

Draw a line from each nutrient to a good food source and to a use of it in the body.

The first one has been done for you.

(i) Name the organ in which excess protein is converted to urea.

[1]

(ii) How is the urea excreted from the body?

..... [2]
