Paper 2 (Core)

May/June 2011

2 hours

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

A copy of the Periodic Table is printed on page 28.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 27 printed pages and 1 blank page.

1 Fig. 1.1 shows layers of sedimentary rocks lying under the sea bed near a coal diagram is not drawn to scale.

Some of these rock layers are permeable and contain fossil fuels trapped inside them.

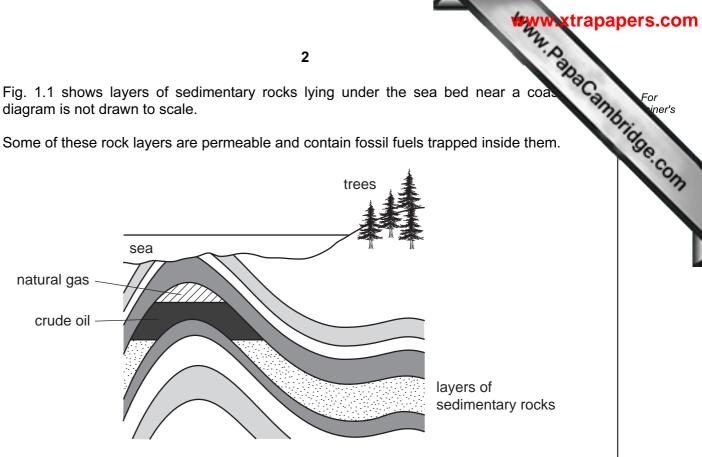

Fig. 1.1

(a) (i) Wood obtained from trees and compounds obtained from crude oil and natural gas can be used as fuels.

State two reasons why crude oil and natural gas are examples of fossil fuels but wood is not.

1
2
[2]
Fossil fuels contain mainly hydrocarbons. Wood contains cellulose which is a carbohydrate.
Name an element which is combined in carbohydrate molecules but not in

(ii)

hydrocarbons.

е	xplanation					

(c) In a car engine, the combustion of hydrocarbons produces a mixture of very how (exhaust) gases.

These gases are released from the car into the atmosphere, and some of them cause pollution because they are poisonous.

Some of the gases in a car's exhaust are listed in Table 1.1.

Table 1.1

substance in exhaust gases
carbon dioxide
carbon monoxide
nitrogen
nitrogen dioxide
oxygen
water vapour

(i)	Write the names of gases chosen from Table 1.1 which match the follow descriptions.	ing
	unreactive element which makes up most of the atmosphere	
	condenses when cooled to form a colourless liquid compound	
		[2]

(ii)	Suggest how a sample of the exhaust gases from a car could be tested to the presence of carbon dioxide.	an
		••••
		[2]
(iii)	Two of the gases in Table 1.1 are hazardous air pollutants because even sm amounts can have harmful effects on humans who inhale them.	all
	Name these hazardous air pollutants.

BLANK PAGE

Please turn over for Question 4.

(a) Fig. 4.1 shows a skier being pulled up a mountain slope by a cable (lift).

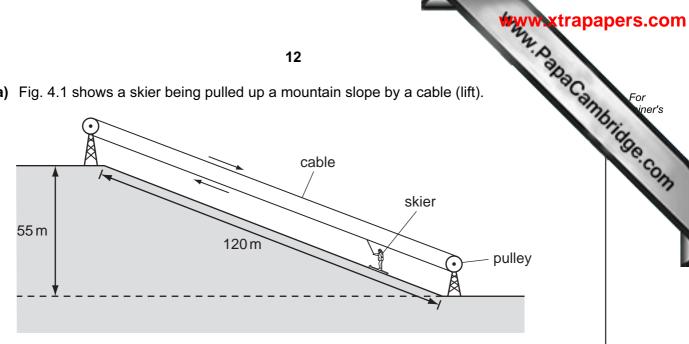

Fig. 4.1

The skier weighs 700 N. She travels 120 m along the slope and rises by a vertical height of 55 m.

Calculate the work done lifting the skier from the bottom to the top of the slope. You should ignore the work done against friction.

State the formula that you use and show your working.

formula used

working

J	[2]

(b) Fig. 4.2 shows the speed-time graph for a skier competing in a race.

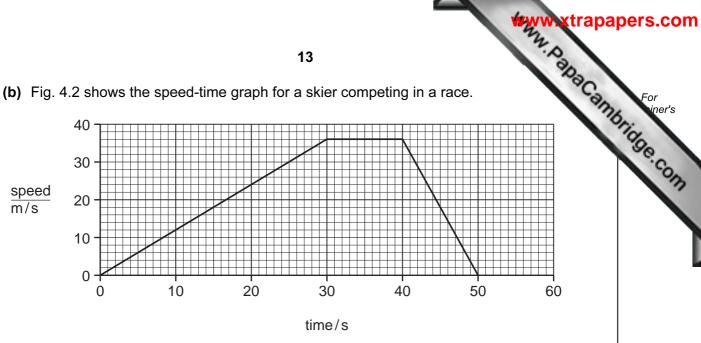

Fig. 4.2

(i)	State the length of time the skier was moving.

		[1]
(ii)	Describe the motion of the skier between 30 and 40 seconds.	
		[2]

(c) Skiers use a ski pole in each hand to help control their motion. The ski poles wo when they only go into the snow for a few centimetres.

Fig. 4.3 shows a skier using ski poles.

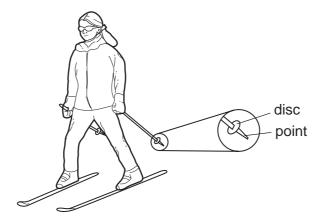

Fig 4.3

	Explain, in terms of pressure, force and area, why the ski pole has a pointed end ar large disc a few centimetres above this.	ıd a
		[2]
(d)	Explain why a skier keeps the lower surface of her skis smooth and well polished.	
		 [1]

5 Guanacos are relatives of camels and live in the Andes mountains in South America feed on grasses and other plants. They are hunted by pumas, and young guanacos may killed by foxes.

Fig. 5.1 shows a guanaco.

Fig. 5.1

(a)	(')	State one readure, visible on rig. 5.1, that indicates that guariacos are mammais.	
		[1]
	(ii)	State one feature, visible on Fig. 5.1, that could help guanacos to avoid being killed by pumas.	j
		[1]
(b)		anacos can live at very high altitudes, above 4000 metres, where there is less gen in the air than at sea level.	3
	(i)	Describe how oxygen from the air enters the blood of a mammal, such as a guanaco.	3
			7]

(ii)	The blood of a guanaco contains four times as many red blood cells per cm
	blood of a human.

16	apapers.com
The blood of a guanaco contains four times as many red blood cells per cm blood of a human.	For iner's
This helps the guanaco to adapt to its environment. Suggest an explanation f this.	or die com
	[2]

(c) Guanacos are an endangered species. Their numbers have fallen because of loss of suitable habitat and because of hunting by humans. Several countries in South America have conservation programmes to try to increase the numbers of guanacos.

In one conservation programme, five male and five female guanacos were introduced into a suitable habitat of about 25 km². They were protected from humans.

Fig. 5.2 shows what happened to the guanaco population over the next few years.

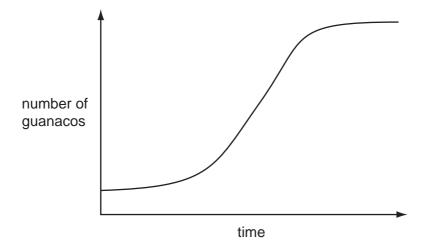

Fig. 5.2

(i)	Explain why the guanaco population eventually stopped increasing.
	[2]
(ii)	Suggest two reasons why it is important to conserve guanacos.
	1
	2
	[2]

Lithiur	n and its compounds have many important uses.
(a) (i	
	group number
	period number [1]
(ii) Fig. 6.1 shows how pieces of lithium metal are stored.
	hydrocarbon oil Li pieces of lithium
	Fig. 6.1
	State and explain why it is necessary to store lithium in this way.
	[2]
(iii	Fig. 6.2 shows a student's attempt to draw the arrangement of all the electrons in a lithium atom.
	Fig. 6.2
	State two mistakes that the student has made.
	1
	2

[2]

(b)	Lith	thium is extracted from the salt lithium chloride by electrolysis.			
	Lith	_ithium chloride is first made by reacting lithium carbonate with an acid A .			
	(i)	Suggest the name of acid A .			
		[1]			
	(ii)	When acid A reacts with lithium carbonate a gas is given off.			
		Name this gas.			
		[1]			
		[1]			
((iii)	Complete the word equation below which describes the electrolysis of lithium chloride.			
		lithium chloride \rightarrow lithium +			
(c)	Lith	ium carbonate is widely used as a drug to treat some types of mental illness.			
	(i)	State the general meaning of the term <i>drug</i> .			
		[41]			
		[1]			
	(ii)	It is very important that compounds for use as drugs are made to high standards of purity.			
		State one important reason for this requirement.			
		[1]			

7 (a) Optical fibres are used to see inside the human body. Light is sent along some fibres to enable doctors to see what is there.

Fig. 7.1 shows an optical fibre with a ray of light travelling down part of it.

Draw the path of the ray of light as it travels down the fibre.

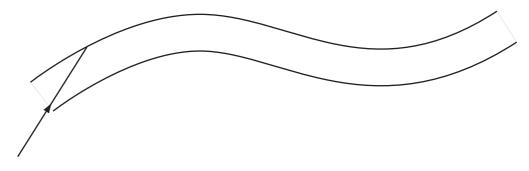

Fig. 7.1

(b) A doctor wants to use a small torch to look down a patient's throat.

The torch does not work.

Fig. 7.2 shows the circuit diagram for the torch.

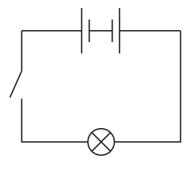

Fig. 7.2

Draw the correct circuit diagram to make the torch work.

[2]

**www.xtrapapers.com

For iner's (c) Human eyes are able to detect the three primary colours. (i) Name these colours. 1 _____ 2 3 _____ [1] (ii) These three colours of light are electromagnetic waves. Apart from their colour, state one other way in which they differ from each other.

[1]

21

****	w.xtrapapers.com
22	Par
Many plants can reproduce sexually. The parts of a plant that carry out sexual reprare the flowers.	For iner's
(a) Name the part of a flower that carries out each of the following functions.	For iner's
(i) attracts insects to the flower	[1]
(ii) makes pollen	[1]
(iii) contains the female gametes	[1]
(b) Explain the differences between <i>pollination</i> and <i>fertilisation</i> .	
	[2]
(c) The cells of a sunflower plant contain 34 chromosomes.	
(i) How many chromosomes will there be in a male gamete of a sunflower?	
	[1]
(ii) State the part of a cell in which chromosomes are found.	
	[1]
(iii) Name the chemical that stores coded instructions in chromosomes.	
	[1]

		www.xt	rapapers.com
		23	
(d)		e cells in the petals of most flowers do not contain chlorophyll and otosynthesise.	For iner's
	(i)	Suggest how the cells in flowers obtain sugars and other nutrients.	Tage con
			[2]
	(ii)	Suggest one reason why cells in flowers need sugars.	[4]

9 A student investigated the reactivity of four metals **A**, **B**, **C** and **D**, by comparing the which these metals reacted in dilute acid.

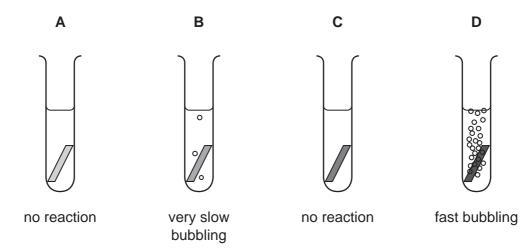

Fig. 9.1

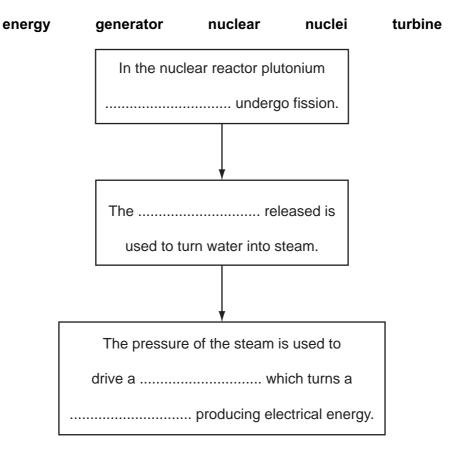

(a) (i) State three variables (experimental conditions) that the student must keep the same if her assessment of the relative reactivity of the four metals is to be reliable.
1
2
3 [3]
(ii) Predict and explain what would be observed if a lighted splint is held in the mouth of the test-tube in which metal D is reacting.
[2]
(iii) Explain briefly why the student's observations did not allow her to place all four metals into order based on their reactivity.
[1]

[2]

	25				
The student was asked to use some larger pieces of metals A and C as electronal cell.					
In addition to the electrodes and connecting wires, the student was given a voltmeter, a beaker and a bottle containing potassium nitrate solution (an electrolyte).					
(i)	Draw a diagram to show how the student should set up the apparatus and materials to produce an electrochemical cell.				
	ro				
	[3]			
(ii)	The student successfully set up the electrochemical cell using metals A and C as electrodes. She measured the voltage of this cell.	S			
	She then replaced the electrode made of metal A by one made of metal B .				
	State and explain the effect, if any, that this had on the electrochemical cell.				
	an e In a bea	The student was asked to use some larger pieces of metals A and C as electron an electrochemical cell. She then replaced the electrode made of metal A by one made of metal B .			

10	(a)	Nuc	clear reactors in power stations released energy through nuclear fission.	For in out
		(i)	Plutonium is a fuel used in nuclear reactors. Another element used as nuclear fundas the symbol U.	Morida
			Name this element.	[1]

(ii) Using words from the list below, complete the flow chart to show the stages of generating electrical energy in a nuclear power station.

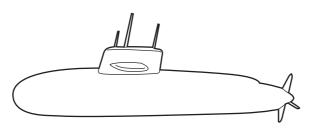

[3]

**www.xtrapapers.com

For iner's

(b) A nuclear reactor can also be used to power a submarine.

Radiation is released during nuclear fission. The reactor has to be shielded to protect the crew from this radiation.

	the crew from this radiation.				
	(i)	Suggest one material which could shield a nuclear reactor to stop radiati escaping.	on		
			[1]		
	(ii)	Describe how exposure to ionising radiation can affect the human body.			
			[2]		
(c)	Wa	ste from a nuclear reactor contains radioactive material with a half-life of 100 year	S.		
	A sample of this material gives a count rate of 3200 counts per minute.				
	(i)	What instrument could be used to measure the count rate?			
			[1]		
	(ii)	Calculate the time taken for the count rate to drop to 400 counts per minute.			
		Show your working.
