Paper 3 Theory (Core)

**May/June 2019**

**2 hours**

Candidates answer on the Question Paper.

No Additional Materials are required.

**READ THESE INSTRUCTIONS FIRST**

Write your centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

**DO NOT WRITE IN ANY BARCODES.**

Answer **all** questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

A copy of the Periodic Table is printed on page 36.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

This document consists of **30** printed pages and **6** blank pages.

1 (a) Fig. 1.1 is a diagram of an animal cell.

Fig. 1.1

Table 1.1 shows the parts labelled in Fig. 1.1.

Use Fig. 1.1 to complete Table 1.1.

Table 1.1

| name of part | letter in Fig. 1.1 | function                                 |
|--------------|--------------------|--|
|              |                    | controls what enters and leaves the cell |
|              | <b>B</b>           |  |
|              |                    | contains genetic material                |

[3]

(b) Animal cells **cannot** photosynthesise.

Describe the function of photosynthesis, **and** state why animal cells are unable to photosynthesise.

.....

.....

..... [2]

(c) Respiration occurs in living cells. Water is a product of respiration.

(i) Name **one other** product of respiration.

..... [1]

(ii) Describe how water moves out of animal cells.

Include the name of the process in your answer.

.....  
.....  
.....  
..... [3]

[Total: 9]

2 Fig. 2.1 shows the chemical symbols of five elements in Period 4 of the Periodic Table.

A copy of the whole Periodic Table is on page 36.

|    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |
|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|
| 19 | 20 | 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | 29 | 30 | 31 | 32 | 33 | 34 | 35 | 36 |
| K  |    |    |    |    |    | Mn |    | Co |    |    |    |    |    |    |    | Br | Kr |

Fig. 2.1

(a) (i) Explain what the numbers 19 to 36 represent for the elements in Period 4 from K to Kr.

.....  
 ..... [1]

(ii) Using only the symbols shown in Fig. 2.1, identify:

- a metallic element .....
- a non-metallic element .....
- a transition metal .....
- a halogen .....
- the least reactive element in the period .....
- an element that reacts violently with water. ....

[3]

(b) An atom of phosphorus contains 15 electrons.

Complete Fig. 2.2 to show the number of electrons in each shell of a phosphorus atom.

One electron in each shell has been drawn for you.

Fig. 2.2

[2]

(c) The elements hydrogen and oxygen combine to form water,  $\text{H}_2\text{O}$ .

Fig. 2.3 shows molecules in a mixture of hydrogen and oxygen.

Fig. 2.4 shows molecules in water vapour.

Fig. 2.3

Fig. 2.4

(i) State the formula of an oxygen molecule.

.....

[1]

(ii) Use Fig. 2.3 and Fig. 2.4 to describe **one** difference between a mixture of two elements and a compound of two elements.

.....  
 .....  
 .....

..... [2]

[Total: 9]

3 (a) Fig. 3.1 shows four different parts of a cyclist's journey.

1. eating food      2. riding along a flat road      3. riding up a hill      4. riding down a hill

**Fig. 3.1**

Complete the sentences about **useful** energy transformations using words or phrases from the list. You may use each word or phrase once, more than once or not at all.

**chemical potential      gravitational potential      kinetic      sound      thermal**

The cyclist starts his day by eating food. This provides a store of ..... energy within the cyclist's body.

This energy in the cyclist's body is transferred to ..... energy as the cyclist rides along the flat road.

The cyclist rides up a hill and some of the energy is transferred to ..... energy.

When the cyclist rides down a hill he does not need to pedal. The cyclist gains speed as the ..... energy is transferred to kinetic energy.

[3]

(b) The cyclist rides the bicycle for a total of 0.5 hours and then stops. The journey was 12 km.

Calculate the average speed of the cyclist.

Show your working.

average speed = ..... km/h [2]

(c) Fig. 3.2 shows the speed-time graph for part of the cyclist's journey.

**Fig. 3.2**

- (i) Label with an **X** a point where the cyclist is at rest. [1]
- (ii) Label with a **Y** a point where the cyclist is moving with changing speed. [1]
- (iii) Label with a **Z** a point where the cyclist is moving with constant speed. [1]

(d) The cyclist uses a bicycle light.

The bicycle light circuit contains a cell, a switch and a lamp.

- (i) Draw a circuit diagram for the bicycle light.

[2]

8

(ii) The potential difference across the lamp is 1.5V.

The current flowing in the circuit is 0.75A.

Calculate the resistance of the lamp.

Show your working.

resistance = .....  $\Omega$  [2]

[Total: 12]

- 4 (a) Table 4.1 shows the types and number of teeth in an adult human.

**Table 4.1**

| type of tooth | number of tooth type in adults |
|---------------|--------------------------------|
| canine        | 4                              |
| incisor       | 8                              |
| molar         | 12                             |
| pre-molar     | 8                              |

- (i) Calculate the total number of teeth in this adult human.

..... [1]

- (ii) Use your answer in (a)(i) to calculate the percentage of human teeth which are **incisors**.  
Show your working.

..... % [1]

- (iii) Suggest why herbivores such as sheep have a larger percentage of molars than humans.  
Explain your answer.

.....  
 .....  
 ..... [2]

- (b) There are two types of digestion.

State the type of digestion that involves teeth.

..... [1]

- (c) Describe **two** ways to take proper care of teeth.

1 .....

.....

2 .....

.....

[2]

[Total: 7]

5 (a) The substances calcium, calcium carbonate and calcium oxide react separately with dilute hydrochloric acid.

(i) The same salt is produced when the three substances named above react with dilute hydrochloric acid.

Name this salt.

..... [1]

(ii) Name the gases made when each of the three substances react separately with dilute hydrochloric acid. If no gas is made, write 'no gas'.

calcium .....

calcium carbonate .....

calcium oxide .....

[2]

(b) Calcium oxide is an ionic compound.

Calcium atoms lose electrons to become calcium ions.

State whether a calcium ion has a positive or a negative electrical charge.

Explain your answer.

charge .....

explanation .....

.....

.....

[2]

(c) Fig. 5.1 shows a lime kiln.

In a lime kiln, calcium oxide,  $\text{CaO}$ , is obtained by heating calcium carbonate (limestone),  $\text{CaCO}_3$ . The reaction also produces carbon dioxide.

Fig. 5.1

(i) The conversion of calcium carbonate to calcium oxide involves an endothermic chemical reaction.

State the meaning of the term *endothermic*.

.....  
 ..... [1]

(ii) Calcium oxide and carbon dioxide are simpler substances than calcium carbonate.

State the type of chemical reaction that converts calcium carbonate to calcium oxide in the lime kiln.

..... [1]

(iii) Construct the word equation for the reaction.

(iv) Suggest why the mixture of waste gases leaving the lime kiln contains a large amount of nitrogen.

.....  
 ..... [1]

(d) Some industrial waste products are treated with limestone.

Explain why this is done.

.....  
.....  
..... [2]

[Total: 11]

**BLANK PAGE**

- 6 (a) Fig. 6.1 shows a presenter talking into a microphone at a radio station, and a man listening to the radio show on a radio at home.

Fig. 6.1

- (i) Write **radio waves** in the correct location in the incomplete electromagnetic spectrum in Fig. 6.2.

[1]

Fig. 6.2

- (ii) Fig. 6.3 shows soundwaves travelling in compressions (C) and rarefactions (R) from the loudspeaker to the ear of the man.

On Fig. 6.3 use a double headed arrow ( $\longleftrightarrow$ ) to show one wavelength.

Fig. 6.3

[1]

- (iii) The distance from the radio station to the man is 500 km.

Suggest why the radio signal arrives at the man's radio almost instantly.

..... [1]

(b) The radio presenter is talking about photography.

(i) Complete the ray diagram in Fig. 6.4 to show how light rays from an object travel through a converging lens and are focused on the image sensor.

[2]

Fig. 6.4

(ii) State the name of the distance **L** shown in Fig. 6.4.

..... [1]

(c) The man investigates the properties of water.

(i) State the melting point of water.

temperature = ..... °C [1]

(ii) The man boils the water in a kettle to produce steam.

Fig. 6.5 shows different arrangements of molecules in solids, liquids and gases.

Label each of the diagrams using the words **ice**, **steam** and **water** to show the correct arrangement of molecules for each.

.....

[2]

Fig. 6.5

[Total: 9]

7 (a) Complete the definition of the term *transpiration* using words or phrases from the list.

You may use each word or phrase once, more than once or not at all.

- |                     |                    |                  |                    |
|---------------------|--------------------|------------------|--------------------|
| <b>condensation</b> | <b>chlorophyll</b> | <b>diffusion</b> | <b>evaporation</b> |
| <b>mesophyll</b>    | <b>osmosis</b>     | <b>phloem</b>    | <b>root hair</b>   |

Transpiration is the loss of water vapour from plant leaves by .....  
of water at the surfaces of the ..... cells followed by  
..... of water vapour through the stomata.

[3]

(b) The graph in Fig. 7.1 shows the effect of humidity on the rate of transpiration.

Fig. 7.1

Describe the relationship between humidity and transpiration.

.....  
..... [1]

(c) Complete the graph in Fig. 7.2 to show the effect of temperature on the rate of transpiration.

Include on your graph:

- labels on both axes
- a sketch of a suitable line.

[2]

Fig. 7.2

(d) Name the vessel in plants that transports water from the roots to the leaves.

..... [1]

[Total: 7]

8 Electrolysis is a process which uses electricity to break down a compound.

(a) Complete the sentences using words or phrases from the list.

Each word or phrase may be used once, more than once or not at all.

**anode**

**cathode**

**cell**

**electrolyte**

**gases**

**insulator**

**ions**

**molecules**

In electrolysis the liquid is called the ..... because it contains ..... that are free to move.

The positive electrode is called the ..... and the negative electrode is called the .....

[3]

(b) A student uses the apparatus shown in Fig. 8.1 to investigate the electrolysis of dilute sulfuric acid.

**Fig. 8.1**

The student turns on the power supply and starts the stopclock.

She records the volume of gas **P** and the volume of gas **Q** every minute for 20 minutes.

Her results are shown in Fig. 8.2.

**Fig. 8.2**

- (i) Gas **P** forms at the positive electrode and gas **Q** forms at the negative electrode.

Identify the gases.

gas **P** .....

gas **Q** .....

[2]

- (ii) Using the graph, state the total volume of gas **P** produced during the investigation.

volume of gas **P** = ..... cm<sup>3</sup> [1]

- (iii) Use the information in Fig. 8.2 to compare quantitatively the rates of production of gas **P** and gas **Q**.

.....

..... [1]

- (iv) Use the information in Fig. 8.2 to calculate the rate at which gas **P** is produced in units of cm<sup>3</sup>/minute.

Show your working.

rate of production of gas **P** = ..... cm<sup>3</sup>/minute [1]

(c) Metal **M** is extracted from the ore bauxite by electrolysis.

Metal **M** is used to make many useful products.

(i) Name metal **M**.

..... [1]

(ii) Bauxite is a finite resource.

State **one** way that the need for bauxite can be reduced.

.....  
..... [1]

[Total: 10]

**BLANK PAGE**

9 Petroleum is a non-renewable energy resource used to produce electricity.

(a) Place a tick (✓) in the boxes to correctly describe each energy resource as either renewable or non-renewable.

| energy resource | renewable | non-renewable |
|-----------------|-----------|---------------|
| coal            |           |               |
| geothermal      |           |               |
| natural gas     |           |               |
| solar           |           |               |
| waves           |           |               |

[2]

(b) State **two** disadvantages of energy production using wind turbines.

1 .....

2 .....

[2]

(c) Fig. 9.1 shows supply cables from a power station supported by pylons.

The cables are suspended loosely in hot weather.

Fig. 9.1

Explain why the cables must be suspended loosely in hot weather.

.....  
 .....  
 ..... [2]

- (d) Fig. 9.2 shows a saucepan of water being heated on an electric cooker. The water is heated to boiling point and continues to boil for 30 minutes.

**Fig. 9.2**

- (i) Describe what happens to the temperature of the water while it is boiling.

..... [1]

- (ii) The cooker is switched off and the water is allowed to cool.

Before heating, the mass of the water in the saucepan was 1000g. The mass of the water in the saucepan is now 600g.

Determine the mass of water that has been lost from the saucepan.

mass of water lost from the saucepan = ..... g [1]

- (iii) State what has happened to the water that has been lost from the saucepan.

..... [1]

[Total: 9]

- 10 (a) Describe the difference between **phenotypic variation** and **genetic variation**.

.....

.....

.....

..... [2]

- (b) A class investigated the number of students that are able to roll their tongues.

Fig. 10.1 is a graph of the results.

**Fig. 10.1**

Use evidence from Fig. 10.1 to explain why this is an example of **discontinuous** variation.

.....

..... [1]

- (c) The list shows some examples of different types of variation.

Place a tick (✓) in the boxes to show **all** the examples of **continuous** variation.

|                |  |
|----------------|--|
| height         |  |
| foot length    |  |
| sex (gender)   |  |
| types of teeth |  |
| mass           |  |

[2]

(d) Fig. 10.2 is a photograph of a giraffe, a mammal. Giraffes eat the leaves from branches on trees.

Fig. 10.2

The ancestors of giraffes had shorter necks.

Describe how giraffes developed long necks by natural selection.

Use the words **variation**, **competition** and **alleles** in your answer.

.....

.....

.....

.....

.....

.....

..... [4]

[Total: 9]

- 11 (a) Fig. 11.1 shows a beaker containing sand and aqueous sodium chloride.

Fig. 11.1

Suggest a method used to separate  
the sand from the aqueous sodium chloride

.....  
the water from sodium chloride.

.....  
[2]

- (b) Fig. 11.2 shows fractional distillation being used to separate ethanol and water.

Fig. 11.2

- (i) Suggest the purpose of the part of the apparatus labelled **W**.

.....  
 ..... [1]

- (ii) Explain why ethanol can be separated from water by fractional distillation.

.....  
 ..... [1]

- (c) Fractional distillation is used in industry to obtain useful hydrocarbons from a raw material **R**.

- (i) Identify raw material **R**.

..... [1]

- (ii) Ethane and ethene are hydrocarbons.

The structure of an ethane molecule is shown below.

Complete the diagram of an ethene molecule.

| ethane   | ethene   |
|--|--|
| $  \begin{array}{c}  \text{H} \quad \text{H} \\    \quad   \\  \text{H} - \text{C} - \text{C} - \text{H} \\    \quad   \\  \text{H} \quad \text{H}  \end{array}  $ | $  \begin{array}{c}  \text{H} \quad \text{H} \\    \quad   \\  \text{C} \quad \text{C}  \end{array}  $ |

[2]

(d) Alkenes are produced when alkanes are heated in the presence of a catalyst.

Fig. 11.3 shows laboratory apparatus used for this reaction.

Fig. 11.3

(i) Name the process that converts alkanes into alkenes.

..... [1]

(ii) State the colour change which is observed in the bromine solution during the process.

colour changes from ..... to ..... [2]

[Total: 10]

**BLANK PAGE**

12 (a) Fig. 12.1 shows a bridge between two supports.

Fig. 12.1

(i) Name the force that is represented by the vertical downwards arrow from the bridge.

..... [1]

(ii) The bridge has a mass of 625 000 kg.

Calculate the downwards force of the bridge.

gravitational field strength = 10 N/kg.

downwards force = ..... N [2]

(iii) The bridge is supported by reaction force 1 and reaction force 2.

Using your answer to (a)(ii) state the total size of the reaction forces (reaction force 1 + reaction force 2).

Explain your answer.

total reaction forces = ..... N

explanation .....

..... [2]

(b) The bridge is supported on granite rocks. Radioactive radon gas seeps out of the rocks in small quantities.

(i) State **one** danger of ionising radiation to living things.

..... [1]

(ii) A radiation counter produces a clicking sound for each ionising particle detected.

A piece of paper is placed between the rock and the counter and the clicking sounds stop.

State the type of radiation that is being emitted by the rock.

..... [1]

(iii) Radon gas from rocks contributes to background radiation.

Suggest **one** other source of background radiation.

..... [1]

(iv) A sample of granite contains 1 000 000 atoms of radon-222.

Radon-222 has a half life of 3.8 days.

Calculate the number of radon-222 atoms remaining after 7.6 days.

Show your working.

number of atoms remaining ..... [2]

[Total: 10]

13 (a) Fig. 13.1 is a diagram of the male reproductive system.

Fig. 13.1

(i) Name **two** liquids carried by the tube labelled **A** in Fig. 13.1.

1 .....

2 ..... [2]

(ii) Sperm swim in a liquid secreted from one part of the male reproductive system shown in Fig. 13.1.

Draw an **X** on Fig. 13.1 to identify this part. [1]

(b) (i) State the term that describes the fusion of nuclei of male and female gametes.

..... [1]

(ii) State the part of the male reproductive system where gametes are produced.

..... [1]

(iii) State the name of the female gamete.

..... [1]

(c) Reproduction is one of the characteristics of living things.

State **two other** characteristics of living things.

1 .....
