### FURTHER MATHEMATICS

Paper 2 Further Application of Mathematics MARK SCHEME Maximum Mark: 120 9795/02 October/November 2020

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2020 series for most Cambridge IGCSE<sup>™</sup>, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

This document consists of 20 printed pages.

#### Cambridge Pre-U – Mark Scheme PUBLISHED Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

• the specific content of the mark scheme or the generic level descriptors for the question

· the specific skills defined in the mark scheme or in the generic level descriptors for the question

• the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded positively:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- · marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors

marks are not deducted for omissions

answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as
indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

© UCLES 2020

Page 2 of 20

### GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Math	Maths-Specific Marking Principles					
1	Unless a particular method has been specified in the question, full marks may be awarded for any correct method. However, if a calculation is required then no marks will be awarded for a scale drawing.					
2	Unless specified in the question, answers may be given as fractions, decimals or in standard form. Ignore superfluous zeros, provided that the degree of accuracy is not affected.					
3	Allow alternative conventions for notation if used consistently throughout the paper, e.g. commas being used as decimal points.					
4	Unless otherwise indicated, marks once gained cannot subsequently be lost, e.g. wrong working following a correct form of answer is ignored (isw).					
5	Where a candidate has misread a number in the question and used that value consistently throughout, provided that number does not alter the difficulty or the method required, award all marks earned and deduct just 1 mark for the misread.					
6	Recovery within working is allowed, e.g. a notation error in the working where the following line of working makes the candidate's intent clear.

Question	Answer	Marks	Guidance
1(a)	B(5000, 0.00008) oe	B1	Binomial and 5000 correct
		B1	0.00008 correct (8 $\times$ 10 <sup>-5</sup> or 1 / 12 500)
1(b)	Large value of $n$ (5000) and small value of $p$ (0.00008)	B1	Both, with numerical values referred to (not just " <i>n</i> is large and <i>p</i> is small") May see $n = 5000 > 20$ and $np = 0.4 < 5$ . Allow if numerically justified. Showing $\mu \approx \sigma^2$ alone is insufficient.
1(c)	$e^{-0.00008n} > 0.99$	M1*A1	M1A0 for $e^{-0.0008n} < 0.01$
	<i>n</i> < 125.6	depM1*	Solving their inequality (could be 57564 or 57565 for M1)
	$n_{\max} = 125$	A1	

Question	Answer	Marks	Guidance
2(a)	$3\alpha\mu + 4\beta\mu = \mu$	M1	Clear use of $E(aX + bY) = aE(X) + bE(Y)$
	$3\alpha + 4\beta = 1$	A1	

© UCLES 2020

Page 4 of 20

Question	Answer	Marks	Guidance
2(b)	$\operatorname{Var}(Z) = (7\alpha^2 + 16\beta^2)\sigma^2$	B1	Clear use of $Var(aX + bY) = a^2 VarX + b^2 Var(Y)$ No need for "Var(Z) =" if intent clear.
	$= (7\alpha^2 + (1-3\alpha)^2)\sigma^2$ $= (16\alpha^2 - 6\alpha + 1)\sigma^2$	M1	Subbing in $Var(X)$ & $Var(Y)$ and either $\alpha$ or $\beta$
	$\frac{\mathrm{d}V}{\mathrm{d}\alpha}: \ 32\alpha - 6 = 0$	M1	Or $16\left(\alpha - \frac{3}{16}\right)^2 + \frac{7}{16}$ or equivalent method for minimum
	$\alpha = \frac{3}{16}$ and $\beta = \frac{7}{64}$	A1	
	$\operatorname{Var}(Z) = \frac{7}{16}\sigma^2$	A1	

Question	Answer	Marks	Guidance
3(a)	$e^{-\lambda} \frac{\lambda^{\lambda}}{\lambda!}$	B1	This only
3(b)	N(60, 60)	B1	Stated or implied, allow $\sqrt{60}$ here
	$\Phi\left(\frac{60.5-60}{\sqrt{60}}\right) - \Phi\left(\frac{59.5-60}{\sqrt{60}}\right)$	M1	Or could see use of symmetry. Correct cc needed, allow 60 here.
		A1	Fully correct
	= 0.525 0.474 = 0.0515	A1	Answer, accept anything in [0.0514, 0.0518] www

© UCLES 2020

Page 5 of 20

# www.xtrapapers.com

Question	Answer	Marks	Guidance		
3(c)	$\frac{1}{\sqrt{\lambda}\sqrt{2\pi}}e^{0}\approx e^{-\lambda}\frac{\lambda^{\lambda}}{\lambda!}$	M1	Use normal pdf $\frac{1}{\sigma\sqrt{2\pi}} e^{\frac{-1}{2}\left(\frac{y-\mu}{\sigma}\right)^2}$ with $y = \mu / \lambda$ and $\sigma^2 \approx \mu$ . Ignore confusion between $\mu$ and $\lambda$ . (Condone minor slip for M1)		
	$\Rightarrow \lambda! \approx \sqrt{2\pi\lambda} e^{-\lambda} \lambda^{\lambda} \mathbf{AG}$	A1			
3(d)	So $\ln 75! \approx \frac{1}{2} \ln(2\pi \times 75) - 75 + 75 \ln(75)$	M1	Subbing in $\lambda = 75$ and using law of logs correctly at least once.		
	≈ 251.8893 (7 sf)	A1	No marks for 'exact' value (251.8904) 7 sf asked for, but allow fewer provided clearly <i>not</i> 251.8904		

Question	Answer	Marks	Guidance
4(a)	$P(R = r) = pq^{r-1}$ or $p(1-p)^{r-1}$	B1	Stated or implied
	$\mathbf{G}(t) = \Sigma \mathbf{P}(R=r)t^r$	M1	$\Sigma P(R=r)t^r$ used (series could be explicit)
	$= \sum pt(qt)^{n-1}$	A1	One intermediate step needed
	Using GP formula, $G(t) = \frac{pt}{1-qt} \mathbf{AG}$	B1	Mention or quote GP formula or equivalent

© UCLES 2020

Page 6 of 20

# www.xtrapapers.com

Question	Answer	Marks	Guidance
4(b)	Geo(0.3)	B1	Stated or implied
	$[G(t)]^{5} = \left(\frac{0.3t}{1 - 0.7t}\right)^{5}$	M1	Use of $[G(t)]^5$
	$= 0.3^5 t^5 (1 - 0.7t)^{-5}$	M1	Appropriate form for bin expansion, correct coefficient selected
	Coeff of $t^8 = 0.3^5 \times 0.7^3 \times 35$	M1	Use binomial expansion (independent of previous mark)
	= 0.02917	A1	Answer, art 0.0292

Question	Answer	Marks	Guidance
5(a)	$S^2 = \frac{15}{14} \times 5.6^2 = 33.6$	B1	$\frac{15}{14}$ used here
	$11.6 \pm 2.977 \sqrt{\frac{33.6}{15}}$	M1	$11.6 \pm t \sqrt{\frac{S^2}{15}}$ , with any t or 2.576
		B1	<i>t</i> = 2.977
	= (7.14, 16.06)	A1	Both end-points correct to 2dp           Not 7.14 < $\mu$ < 16.06 unless carefully explained           SR no 15/14:         7.30, 15.90         B0M1A1           SR normal:         7.75, 15.46         B1M1A0           SR both:         7.88, 15.33         B0M1A0
	Assume autumn mid-day temperature in London is normally distributed	B1	Or equivalent – <i>not</i> "sample". Must be in context.

Question	Answer	Marks	Guidance	
5(b)	$\hat{\mu}_{\text{Paris}} = 14.294(243/17)$	B1	14.3 or better stated or implied	
	$S_{\text{Paris}}^2 = \frac{17}{16} \left( \frac{4070}{17} - 14.294^2 \right)  [= \frac{10141}{272} = 37.283]$	M1	Or without $\frac{17}{16}$ [= 10141/289 = 35.090]	
	$\hat{\sigma}^2 = \frac{14 \times "33.6" + 16 \times "37.283"}{15 + 17 - 2}$	M1	Find pooled variance estimate or biased with 15, 17	
	= 35.6 (35.5643)	A1	Stated or implied, allow $\frac{S_{\text{London}}^2}{15} + \frac{S_{\text{Paris}}^2}{17}$ but just adding; M0	
	$(14.294 - 11.6) \pm 2.042\sqrt{35.5643\left(\frac{1}{15} + \frac{1}{17}\right)}$	M1	Use $\hat{\sigma}^2 \left( \frac{1}{15} + \frac{1}{17} \right)$ . But 1/32; M0A0. 2.694±2.042 $\sqrt{4.46297}$	
		B1	2.042 used	
	= (-1.62, 7.01)	A1	Both, correct to 2dp (differences may be the other way round)	
	Assume both distributions are normally distributed with a common variance	B1	Condone omission of 'both normally distributed' here if final B1 gained in (a). Ignore mention of independence.	

Question	Answer	Marks	Guidance
6(a)		B1	Horizontal line $y = \frac{1}{3}$ in $0 \le x \le 3$ and nothing else (except axis)
		M1	Correct negative parabola, must stop at <i>x</i> -axis but ignore absence of horizontal portions
		A1	Roughly correct relative position (so that areas approx. equal) so must show 2 points of intersection. Ignore y-axis values other than <sup>1</sup> / <sub>3</sub> which must be correct if shown.

Question	Answer	Marks	Guidance	
6(b)	T; more likely to take values close to extremities or more of the distribution of $T$ is further from its mean oe.	B2	T stated with good reason. SC: $T$ stated with dubious or partial reason: B1	
6(c)	$\int_{0}^{u} \frac{2}{9} x(3-x)  \mathrm{d}x = \left[\frac{1}{3}x^{2} - \frac{2}{27}x^{3}\right]_{0}^{u}$	M1	Integration of $f(x)$	
		A1	Correct indefinite integral	
	$(\mathbf{F}(u) = )\frac{1}{3}u^2 - \frac{2}{27}u^3 = 0.75$	M1	Equation for <i>u</i> , or both $\int_{0}^{2.02} f(x) dx$ and $\int_{0}^{2.03} f(x) dx$ attempted	
	F(2.02) = 0.7496, F(2.03) = 0.7540 or evaluation in equivalent cubic e.g. $g(u) = 8u^3 - 36u^2 + 81$ with explanation	A1	At least one correct evaluation at 2.02 and/or 2.03	
	hence $2.02 < u < 2.03$ AG	A1	All correct, with justification (could be just inequalities) Or: u = 2.0209 or better (2.020945) A1, hence A1	
6(d)	$F(x) = P(S \le x) = \frac{1}{3}x^2 - \frac{2}{27}x^3$	M1	Obtain CDF	
	$P(Y \leqslant y) = P(\sqrt{S} \leqslant y) = P(S \leqslant y^2)$	M1	Use inverse function	
	$= F(y^2)$	A1	$F(y^2)$ stated or implied	
	$= \begin{cases} 0 & y < 0 \\ \frac{1}{3}y^4 - \frac{2}{27}y^6 & 0 \le y \le \sqrt{3} \\ 1 & y > \sqrt{3} \end{cases}$	A1	$\frac{1}{3}y^4 - \frac{2}{27}y^6$ correct	
		B1	0, 1 and all ranges stated and correct (CDF need not be named). Ignore overlap at 0 and/or 1. Condon if single value 0 or 1 missing

Question	Answer	Marks	Guidance	
12(c)	Alternative 1			
	Let total extension of string be x: $2.5 - \frac{2.5x}{0.5} = 0.25\ddot{x}$	(M1)	NII with 2 forces, ma and correct signs	
	$\ddot{x} = -20(x - 0.5)$	(A1)	Correct and rearranged to useful form	
	$y = x - 0.5 \Longrightarrow \ddot{y} = \ddot{x}$	(M1)	Stated or implied	
	$\Rightarrow \ddot{y} = -20y$ which is SHM	(A1)	Correct equation and SHM stated	
	with a new equilibrium position 1m below the ceiling oe	(A1)		
	Alternative 2			
	New equilibrium extension $e'$ is given by $\frac{2.5}{0.5}e' = 0.25 \times g$	(M1)		
	<i>e</i> ′ = 0.5	(A1)		
	Let general extension below new equilibrium position be x $0.25\ddot{x} = \pm \left(0.25g - \frac{2.5(x+0.5)}{0.5}\right)$	(M1)		
	or $\pm \left(\frac{2.5(0.5-x)}{0.5} - 0.25g\right)$			
		(A1)	If M1M0 then SC1 for $\ddot{x} = -20x$ or $-(2\sqrt{5})^2 x$ seen	
	$\Rightarrow \ddot{x} = -20x$ (www) which is SHM	(A1)

Question	Answer	Marks	Guidance		
12(c)	Alternative 3				
	Let total extension of string be $x$ m and consider energy with eg $x$ m below ceiling at 0 PE level				
	Total energy $=\frac{1}{2} \times 0.25v^2 + \frac{2.5x^2}{2 \times 0.5} - 0.25gx = \text{const}$	(M1)	3 forms of energy added and equated to constant		
	$0.25v\frac{dv}{dx} + 5x - 2.5 = 0 \implies \ddot{x} + 20x - 10 = 0$	(M1)	Differentiating both sides wrt x and using $v \frac{dv}{dx} = \ddot{x}$		
	$y = x - 0.5 \Rightarrow \ddot{y} = \ddot{x}$	(M1)	Stated or implied		
	$\Rightarrow \ddot{y} = -20y$ which is SHM	(A1)	Correct equation and SHM stated		
	with a new equilibrium position 1m below the ceiling oe	(A1)			
12(d)	Amplitude <i>a</i> is given by $v^2 = \omega^2 (a^2 - x^2)$	M1	Use of formula with numerical $v$ , $\omega$ and $x$ to calculate $a$		
	$1.06^2 = 20(a^2 - 0.1^2)$	A1	Correct $ x $ used, with their 1.06 from (b) and their 20 from (c)		
	a = 0.257  m	A1			
	Alternative 1				
	Suppose 0 PE level is at bottom Energy just after collision $= \frac{1}{2} \times 0.25 \times 1.06^{2} + 0.25g(0.1+a) + \frac{2.5 \times 0.4^{2}}{2 \times 0.5}$	(M1)	0.79045 + 2.5a but this depends on where 0 PE level is set		
	Energy at bottom = $\frac{2.5 \times (0.5 + a)^2}{2 \times 0.5}$ = Energy after collision	(M1)	$2.5a^2 + 2.5a + 0.625$		
	$2.5a^2 = 0.16545 = a = 0.257 \text{ m}$	(A1)

Question	Answer	Marks	Guidance		
12(d)	Alternative 2				
	$x = a\cos\left(\sqrt{20}t + \phi\right) \text{ and } t = 0, x = -0.1 \Rightarrow a\cos\phi = -\frac{1}{10}$ $v = -\sqrt{20}a\sin\left(\sqrt{20}t + \phi\right) \text{ and } t = 0, v = 1.06$	(M1)	Using general form for x in terms of t at $t = 0$		
	$\Rightarrow a\sin\phi = -\frac{1.06}{\sqrt{20}}$	(M1)	Differentiating to find $v$ in terms of $t$ and using $t = 0$		
	$\cos^2 \phi + \sin^2 \phi = 1 \Longrightarrow a^2 = \frac{1}{100} + \frac{1.06^2}{20} = a = 0.257 \text{ m}$	(A1)
