# Friday 17 June 2016 - Morning <br> A2 GCE ACCOUNTING 

F014/01/RB Management Accounting
RESOURCE BOOKLET

To be given to candidates at the start of the examination

Duration: 2 hours

## INSTRUCTIONS TO CANDIDATES

- The information required to answer Questions 1-4 is contained within this Resource Booklet.

## INFORMATION FOR CANDIDATES

- The quality of your written communication will be taken into account in marking your answers to the two sub-questions marked with an asterisk (*).
- In one of these questions, the focus will be on your ability to present numerical information legibly and in an appropriate accounting format. In the other, you will be assessed on the legibility and style of writing, the clarity and coherence of your arguments and the accuracy of your spelling, punctuation and grammar.
- This document consists of $\mathbf{8}$ pages. Any blank pages are indicated.

## INSTRUCTION TO EXAMS OFFICER/INVIGILATOR

- Do not send this Resource Booklet for marking; it should be retained in the centre or recycled. Please contact OCR Copyright should you wish to reuse this document.

1 On 1 January 2013 Martin Ltd had an opening stock of 560 units costing £16 each. At this date the business entered into a three-year contract with a sole supplier. The contract stated that all purchases in 2013 would be maintained at $£ 16$ each. Subsequent purchase price movements would be in line with a specific industry price index based on a retrospective year basis (i.e. the 2014 purchase price would be the 2013 purchase price plus the 2013 specific industry price index movement).

The specific industry price index movements were:
2013: 5\%
2014: 2.5\%
Purchase quantities:
2013: 600 units per month
2014: 660 units per month
2015: 750 units per month
Sales quantities:
2013: 7120 units per annum
2014: 7900 units per annum
2015: 9260 units per annum
The selling price for 2013 was based on a sales margin of $20 \%$ against the 2013 purchase price. The selling price was increased by $5 \%$ for all sales made in 2014 . The 2014 selling price was then maintained for all sales made in 2015.

## REQUIRED

(a) The closing stock valuation for Martin Ltd as at 31 December 2013, 2014 and 2015, using each of the following methods of stock valuation (periodic basis):

- FIFO
- LIFO.
(b) The gross profit for each of the years 2013, 2014 and 2015 under the FIFO method of stock valuation (periodic basis).
(c)* Discuss the appropriateness of the FIFO, LIFO and AVCO methods of stock valuation.

2 Grant Ltd offers a sub-contracting service to the motor industry. Components are supplied by customers, the required operations are carried out and the completed work is then returned to the customer. The work is done by different grades of labour. The company also purchases a small amount of material to complete the work.

The company has produced the following budgeted data.

| Department | Direct labour <br> costs | Direct labour <br> hours | Direct material <br> costs | Direct machine <br> hours | Factory <br> overheads |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | $£$ |  | $£$ |  | $£$ |
| Finishing | 1000000 | 250000 | 12000 | 15000 | 450000 |
| Assembly | 900000 | 300000 | 13000 | 9000 | 360000 |
| Packing | 500000 | 187500 | 16000 | 7500 | 150000 |

Currently a single factory overhead recovery rate is used, which is a percentage of total direct labour costs.

The cost sheet for job NG113 shows the following information:

| Department | Direct labour <br> costs | Direct labour <br> hours | Direct material <br> costs | Direct machine <br> hours |
| :--- | :---: | :---: | :---: | :---: |
| Finishing | $£$ |  | $£$ |  |
| Assembly | 8800 | 1100 | 260 | 70 |
| Packing | 10000 | 1500 | 240 | 65 |
|  | 2400 | 400 | 300 | 80 |

General office expenses of $20 \%$ are added to the total factory cost. The selling price to the customer is based on a $40 \%$ profit margin.

The company has been using the single factory overhead recovery rate for some time. However, one of the directors has questioned this method, and has asked whether it would be possible to calculate alternative methods using individual departments.

## REQUIRED

(a) (i) The current factory overhead rate.
(ii) Calculate the selling price of job NG113 using the current factory overhead rate.
(b) In line with the director's comments, calculate the overhead recovery rate for each department using the following methods:

- direct labour hour rate
- machine hour rate.
(c) The selling price of job NG113 to the customer using the direct labour hour rate for each department.
(d) Evaluate, for Grant Ltd, the current method and both methods stated in part (b) for the recovery of factory overheads.
(e) Discuss how an inaccurate rate of overhead absorption can adversely affect the profits of a business.

3 Malcolm Ltd started in business on 1 April 2013. The following information is available for its first three years in business:

|  | $\mathbf{2 0 1 3}$ | $\mathbf{2 0 1 4}$ | $\mathbf{2 0 1 5}$ |
| :--- | ---: | ---: | ---: |
| Fixed costs ( $£$ ) | 64000 | 70000 | 72000 |
| Variable costs per unit (£) | 31 | 32 | 36 |
| Selling price per unit (£) | 42 | 42 | 40 |
| Sales (units) |  |  |  |
| Production (units) | 14000 | 16000 | 21500 |
|  | 16000 | 16000 | 20000 |

The variable costs per unit include the direct materials, direct labour and variable overheads required for production.

## REQUIRED

(a)* A statement showing the gross profit for each of the three years under the FIFO basis of valuing issues, if the company used the:

- marginal costing approach to valuing stock
- absorption costing approach to valuing stock.
(b) State three applications of marginal costing in decision-making for a business.

4 Reed Ltd manufactures a single product. The standard monthly production cost based on a production of 4500 units is as follows:

Materials $\quad 108000$ kilos at $£ 6.40$ per kilo
Labour $\quad 15750$ hours at $£ 12$ per hour
Variable overheads
Fixed overheads

15750 hours at $£ 7$ per hour £11 per unit

Actual results for May 2016 were as follows:

Production
Materials
Labour
Variable overheads
Fixed overheads

4680 units
$£ 724500$ for 115000 kilos
£183520 for 14800 hours
£114000
£48300

## REQUIRED

(a) Calculate

- the standard cost for the total production in May 2016
- the actual cost for the total production in May 2016.
(b) Calculate each of the following variances:
- material price
- material usage
- labour rate
- labour efficiency
- total variable overhead
- total fixed overhead.
(c) A reconciliation statement for the budgeted (standard) cost for the total production in May 2016 and the actual cost of production in May 2016.
(d) Discuss two possible effects of a favourable material price variance for a business.
